Hi all, could anyone sugest any website where i can get some backing
sounds for while we are presenting on our radio station, we run a
breakfast show so some background sounds would add a nice touch, we
dont want any singing or anything just kind of umm music, we are a
rock/pop/r&b station if that helps

TIA

Marc

```

As I type this, my Delphi XM radio tuned to channel 166 displays that =
Dr. Natasha is supposedly on. Well, I hear two boring computer geeks =
talking about flat panel monitors. Nothing could be further from Dr. =
Natasha.

```
I tried calling XM technical support and I was told to tune to "89.1"! =
When I explained to the genius that he's supposedly helping customers =
with a SATELLITE RADIO, he went speechless. Then he gagged something =
about being in "activation" and not in "programming". When I requested =
someone who is knowledgeable about this problem, he stated that he knew =
no one who was and could not transfer me or give me another number to =
call. Stellar customer service from another loser outfit!

When I studied this XM company just a minute ago, I found out that Clear =
Channel is one of its owners. And that pretty much explains it all to =
me. After Clear Channel ruined free FM and AM in this country, they now =
have set out to bastardize pay radio too. Too bad Mays & Co (Clear =
Channel owners) are too inbred with the Bush administration to be =
subject to any antitrust action. At least for a while.

So much for this piece of crap radio service. I'll go back to DX'ing SW =
and the few good MW and FM stations I can get in San Antonio. Anybody =
know a good FM/AM tuner? Denon TU-680NAB perhaps...

XM radio sucks!

Margaret

James Dixon wrote:

> Man, you're rude.

So?  I have been called worse....

> What the hell is your problem?

No problem really, except your lack of facts...

I have listened intently for audable differences between XM and SIRIUS.

I have BOTH in my car, and I have both at the stereo shop I work at..
EITHER system is hooked up for EASY A/B switching between the two.

Although SIRIUS claims thier SPLEX sounds better and although XM
claims thier system sounds better,  I HAVE YET TO HEAR IT!!!

SIRIUS claims thier three sats are better than XMs two!
XM clains the 2 GEO STATIONARY birds are better cause they dont duck
behind the horizon!   I cant tell the difference by listening!!

> If you're so damn
> interested, quit screwing around and post your own review instead of wasting
> everyone's time trying to pick mine apart.  Jeez.

I am !!  I am!!
My findings have been posted time after time....
I find no significant differences other than the programming!    Some folks like

Sirius programing, some folks (appearantly most folks) like XM programing!

My facts can be backed up... I dont have claims based on my magic
decibel meter that cant be duplicated...  ;-)

> Do you work for XM?

If I did would I say?
* Sorry to bust your chops, but my SIRIUS sounds great and my
* XM sounds great as well... One is not noticably better than the other!

No, I would probably be spewing one sided propaganda about XM like
you are about SIRIUS....    Maybe you dont work for SIRIUS, maybe
you just bought SIRIUS and have to make up stories about how much
better it is to justify your purchase.... Folks do it about what kind of car
they drive!  One guy things Chevys better, one guy thing FORD is king
and they will make up all kinds of stories to justify thier choice....

>Seriously, he dropped off the face of the earth in the late 80's or early 90's, I think.<

No, he didn't.  You just weren't paying attention.

>the reaction I got from a couple of other people was invariably the same.<

Ah, I see.  Suddenly, "just about everybody in Massachusetts" morphed into "a couple of other people."  Funny how that works.

```

As I type this, my Delphi XM radio tuned to channel 166 displays that =
Dr. Natasha is supposedly on. Well, I hear two boring computer geeks =
talking about flat panel monitors. Nothing could be further from Dr. =
Natasha.

I tried calling XM technical support and I was told to tune to "89.1"! =
When I explained to the genius that he's supposedly helping customers =
```

with a SATELLITE RADIO, he went speechless. Then he gagged something =
about being in "activation" and not in "programming". When I requested =
someone who is knowledgeable about this problem, he stated that he knew =
no one who was and could not transfer me or give me another number to =
call. Stellar customer service from another loser outfit!

When I studied this XM company just a minute ago, I found out that Clear =
Channel is one of its owners. And that pretty much explains it all to =
me. After Clear Channel ruined free FM and AM in this country, they now =
have set out to bastardize pay radio too. Too bad Mays & Co (Clear =
Channel owners) are too inbred with the Bush administration to be =
subject to any antitrust action. At least for a while.

So much for this piece of crap radio service. I'll go back to DX'ing SW =
and the few good MW and FM stations I can get in San Antonio. Anybody =
know a good FM/AM tuner? Denon TU-680NAB perhaps...

XM radio sucks!

Margaret

I've been asked to find out how much it costs to advertise on network
radio shows, ie, Limbaugh, Dr. Laura, Michael Savage, etc.

Before I call the syndicators, a ballpark number would be helpful.  Is
anyone aware of how network commercial costs are computed using some
kind of ratio that may be determined by how many millions of people
may be listening at any given time.  In other words, is there a
formula for coming up with how much you can expect to pay based on how
many listeners are delivered by these shows?

Your help and knowledge is greatly appreciated!  BD

James Dixon wrote:

> Man, you're rude.

So?  I have been called worse....

> What the hell is your problem?

No problem really, except your lack of facts...

I have listened intently for audable differences between XM and SIRIUS.
I have BOTH in my car, and I have both at the stereo shop I work at..
EITHER system is hooked up for EASY A/B switching between the two.

Although SIRIUS claims thier SPLEX sounds better and although XM
claims thier system sounds better,  I HAVE YET TO HEAR IT!!!

SIRIUS claims thier three sats are better than XMs two!
XM clains the 2 GEO STATIONARY birds are better cause they dont duck
behind the horizon!   I cant tell the difference by listening!!

> If you're so damn
> interested, quit screwing around and post your own review instead of wasting
> everyone's time trying to pick mine apart.  Jeez.

I am !!  I am!!
My findings have been posted time after time....
I find no significant differences other than the programming!    Some folks like

Sirius programing, some folks (appearantly most folks) like XM programing!

My facts can be backed up... I dont have claims based on my magic
decibel meter that cant be duplicated...  ;-)

> Do you work for XM?

If I did would I say?
* Sorry to bust your chops, but my SIRIUS sounds great and my
* XM sounds great as well... One is not noticably better than the other!

No, I would probably be spewing one sided propaganda about XM like
you are about SIRIUS....    Maybe you dont work for SIRIUS, maybe
you just bought SIRIUS and have to make up stories about how much
better it is to justify your purchase.... Folks do it about what kind of car
they drive!  One guy things Chevys better, one guy thing FORD is king
and they will make up all kinds of stories to justify thier choice....

Hi all, could anyone sugest any website where i can get some backing
sounds for while we are presenting on our radio station, we run a
breakfast show so some background sounds would add a nice touch, we
dont want any singing or anything just kind of umm music, we are a
rock/pop/r&b station if that helps

TIA

Marc

>Seriously, he dropped off the face of the earth in the late 80's or early 90's, I think.<

No, he didn't.  You just weren't paying attention.

>the reaction I got from a couple of other people was invariably the same.<

Ah, I see.  Suddenly, "just about everybody in Massachusetts" morphed into "a couple of other people."  Funny how that works.

The Colorado Dept of Telecomunications has these also. They have 6
active licenses, 8 pending applications, and 2 active construction
permits on 99.1, 99.7, 106.7, and 107.9. The purpose is to provide
traffic information.

Just because the answers were not the answer YOU WANTED
does not mean the answers were WRONG..!!
I didnt see ANY wrong answers...
The way you worded the question was not too precise in the first place,
if you noticed in my response I gave you TWO correct answeres and then
asked if thats the ones your looking for!  You didnt bother to be more
precise in your question so all you got were very general BUT CORRECT
answers....

Kinda like asking if the SKY IS BLUE but the answer you want
is the precise composition and percentages of atmospheric gasses
that make up the blue hue of the atmosphere of the earth at 2100
UTC on Sept 24th measured from a certain mountaintop in UTAH...

Then you act like WERE STUPID!!!?????

ha ha ha ha....

Good, it's the AM band ones that screw you up, taking away access
tp this-or-that worthwhile program from a distant city in favor of
a continuous political advertisement for the highway department budget.

There's a very subtle thing called Orwell's Inversion, noticed by
John Gall (_Systemantics_) long ago, quote

 2.  Orwell's Inversion.
 The confusion of Input and Output.

 Example.  A giant program to Conquer Cancer is begun.
 At the end of five years, cancer has not been conquered,
 but one thousand research papers have been published.
 In addition, one million copies of a pamphlet entitled
` `You and the War Against Cancer'' have been distributed.
 Those publications will absolutely be regarded as Output
 rather than Input.

Likewise, the radio stations will be regarded as output.

Not quite right either.

A dB is a power ratio, not a measure of power itself.  It is _not_ a voltage
ratio under any conditions.  The 20log voltage representation of dB assumes
that both voltages are measured
[P= E^2 / R] in the same-impedance circuit - so it's really a power ratio.

dBm is power relative to one milliwatt.  Impedance isn't involved.  A
milliwatt is a milliwatt.

Your confusion is probably that old moving needle VU/dB meters were really
voltmeters, and only read correct dBm when measuring the voltage in a
600-ohm circuit.

Bob C.
Leaving no nit unpicked.

Your opinion is definitely in the minority and petty to say the least. Every reviewer of XM I've read basically loves it. I love it. Worth every penny of the $90 I paid for the receiver and $10 per month for the service. It beats AM and FM broadcast all to hell...

The Summer 2003 edition of Broadcasts in English is now available from the British DX Club. It was compiled by Alan Pennington and includes details of all currently known international broadcasts in English on shortwave and mediumwave for the Summer A03 schedule period. It is in time order throughout and covers all target areas. Transmitter sites are listed where known. A comprehensive guide to DX and Media Programmes is also included plus schedules for WorldSpace and World Radio Network for Europe.

Copies are available at the following prices (postage included):

United Kingdom - 2 pounds sterling
Europe - 5 International Reply Coupons; 5 Euros or 4 US Dollars
Rest of the World - 6 International Reply Coupons or 5 US Dollars

UK cheques/Postal Orders should be made payable to British DX Club.
Payments in Dollars or Euros are only accepted in cash.

All orders/enquiries to:
British DX Club, 126 Bargery Road, Catford, London SE6 2LR, UK

Or visit web site www.bdxc.org.uk

I was wondering if anyone knows if there is a list of the DJ'S that were broadcasting from Pennsylvania in the 1970's?  If there is a list where would it be available?  I have been trying to find some of the old jock's and with all the station and handle names it is so hard without list or picking brains who are not so good for the picking now a days.  I am included in the later.  Please let me know.  Also, does anyone remember who the dj's were in the Bedford/Everett PA area in the mid 70's?

Thanks
Becky

Interesting stuff!

Rod Serling also reportedly worked at WMRN radio in Marion, Ohio for a time...probably late 40's early 50's when the station ran lots of network "classic" programming (it wasn't classic at the time) and had an in-house studio that hosted live performances by area bands and entertainers.

Anyway, former WMRN CE Joe Peters told me that Serling was fired from the station because he spent a lot of time writing strange stories. Peters died several years ago so I have no way of knowing if it's true or not.

In casual shopping, my observation was that Sirius sounded quitet a bit better than XM, but I really liked the add on XM tuner made by Delphi.  The Sirius tuner I listened  to seemed awkward to use, especially at 75 mph.

I thought that LPFMs were limited to one to a customer.  How can the state own a couple of dozen in light of this (supposed) rule?  I must be wrong.

So, here I am sitting in San Francisco with a Sirius equiped Hertz rental car. This is my first real exposure to Sirius except online trial. I have XM in my house and cars in Vermont...one Sony unit that I move around.

PRO: Excellent audio quality...can't compare directly because I use a cassette adapter with XM, and this is direct wired. Sounds less compressed, more open with better low freq response.Antenna is on roof near back window.

More knowledgable DJ's, especially on Broadway and Jazz stations. Only XM DJ's that I like are at "Franks Place" programmed by Jonathan Schwartz.

Much better selection of Jazz, standards, and news choices (NPR, PRI) than XM.

CON: Did Sirius just shange all the channels and names? Only about half match the flash card and brochure in the Hertz car. I had to sit in a parking lot and go through all the stations, writing down names, formats and channel numbers on a pad. The average car renter would not take the time to do this...just an old radio guy...

Head unit impossible to change stations while driving without a serious accident. Buttons tiny and type on screen unreadable fron drivers seat.

Many dropouts in City and under all bridges from airport. Definitely no repeaters here. Goes away completely under overhead electric tram wires on Union Street.

I've only had it for two days, and will have it till 5/9....will update impressions as I live with Sirius some more.

Cheers,
Bob Ring

>I thought that LPFMs were limited to one to a customer.  How can the state
>own a couple of dozen in light of this (supposed) rule?

There was a loophole for applicants that are Public Service Safety Organizations to apply for more than one LPFM. The exemption also included colleges with more than one campus, colleges with an existing full power station, and national organizations (including churches) with multiple regions or chapters (like Boy Scouts, Kiwanis, etc.) who were all exempted from the one to a customer rule.

The religious broadcasters have really capitalized on this.  It seems they are in the process of building large LPFM networks.  These same folks have applied for multiple translators in the most recent March filing window.  It is estimated that 13,500 translator applications were made in the five-day window. The overwhelming number of applications totally overloaded the FCC's on-line CDBS pages. You still can't find out who applied.   As I understand it, the FCC hopes to have the applications posted in early May.   It makes LPFM applications seem inconsequential.

Of course, these translators can run 250 watts at very high elevations.  They also do not need to protect third adjacent channels, like 100 watt LPFM's If you guys  got worked up over the idea of a lowly LPFM moving into your community, I'm afraid "you ain't seen nothin' yet."

I can't speak for anyone else, but as a long time radio person and devotee,
I will *never* pay for radio, commercial free or not.

Here's my take on the XM vs. Sirius question.

I've only really heard XM, at a Best Buy in Salt Lake City. The signal quality is better than the local stations, the closest to their quality was the classical music FM (KBYU) and a rimshotter booster (KWKD), but it beat out everything else hands down.

>From the music I've heard on it, they've got a good variety in almost every category. Maybe missing som of the good sounds here and there, but like any new station, they have to build a library, and that can take some doing to get all you want in the library. Few local stations, mainly the classicals, ever are able to acquire a very good library of music.

Heard nary a commercial. They had it on the alternative rock and hit $&B channels and so I don't know if they aired a commercial or not.

As far as flexibility, XM wins. They have the three incarnations of the Delphi SkyFi Radio and various receivers for car and home. And they just soft-launched a $70 PC kit that has features not even available to RealAudio or Windows Media users, not even mp3 players can touch the new kit. Also, you don't have to be on the net to use it with your PC, just hook up the hardware, run the install disc for the interface display, and you're off. See xmradio.com for more.

More on music selection. Saw the Sirius site and it did not have some of the stuff that XM does.

Also, I have a question or two. Are either one of these services going to have more than the present 100 channels? That might be a strong selling point if they could do more than that. There are some possibilties programming-wize that can't be addressed without having about 50 or so more channels online. These choices are very hit-and-miss on AM/FM, largely found on translators or FMs class-A or lower in many areas and a few innovative ones that are popular on the 'net.

Secondly, is there anything under development or is it just that there may not be a way to do this: That is, make a portable 'walkman' style player that can pick up signals from above inside a public transit bus or car or whatever where you can't use or have access to an outside antenna setup? Seems it could be done with upgraded antenna gain, but I'm not sure IF it can even be done, tell me if it can or can't be resolved. (signals don't go throuhg metal at all, unlike regular AM/FM broadcast.

Also, when setting up either service in the home, do you need to be near a south-facing window and if not, how can one get reception without having a south-facing window (like some apartment complexes, etc.)?

If you're a chair potato you might have a chance with that. The advantage of radio is portability. When the web becomes wireless, it'll become just another form of radio.

Having been on the board of advisors for two webcasting companies and an early part of broadcast.com I don't share your bright vision of webcasting's future. All three are either dead or shadows of their former selves.

>From what I have heard about their subscriber numbers, it appears quite a ways from taking off. They are competing against each other, against free radio, as well as CDs including burned CD's. It took years to convince people to pay for television reception, and only then not until cable offered programming not found on free TV that appealed to mass audiences. While there is some of that on satellite radio, much of their product is available elsewhere.

Wow, hope you don't go to movies, watch cable TV, or read newspapers.
Geeze, you can get all the news you want on free TV and radio......

Carl "the DISH, Time Warner, and XM man" Navarro

P.S.  I hope you access your yahoo account from the public library.

Would anyone be able to tell me how I could create a broadcast chain similar to that used on FM stations using Waves plugins?  The purpose for this is to create a plugin chain that I would be able to use for streaming via the internet.  Any help or information would be very helpful.  Thanks.

PYN

Hi Rich,

have a look at "www.lyngsat.com" (Astra 28� digital) to see the offering
of digital satellite radio in the UK.

Compared to FM radio the sound quality of the many satellite feeds is
just amazing - at least the BBC programs are.

Maybe missing som of the good sounds here and there, but like any new station, they have to build a library, and that can take some doing to get all you want in the library. Few local stations, mainly the classicals, ever are able to acquire a very good library of music.

I'm not a classical music fan, but the playlists on the stations I listen to are extensive. The "Deep Tracks" channel (classic rock and current music by artists whose style meshes with the established icons of the genre) boasts more than 6,000 songs. The Decades channels have anywhere from 2,500 to 4,000-plus songs in regular rotation. I've had my XM since January and I still hear a lot of new songs every day.

>
> Also, I have a question or two. Are either one of these services going to have more than the present 100 channels? That might be a strong selling point if they could do more than that. These choices are very hit-and-miss on AM/FM, largely found on translators or FMs class-A or lower in many areas and a few innovative ones that are popular on the 'net.

This topic has come up frequently on http://www.xmfan.com, a bulletin board for XM users. The techies on the board contend that adding channels will degrade sound quality, as there's only so much bandwidth available to squeeze in all the channels. Sirius has an exclusive deal with the NBA for nightly games on several additional channels, and those who've tried Sirius say the audio on the music channels has suffered.

>
> Also, when setting up either service in the home, do you need to be near a south-facing window and if not, how can one get reception without having a south-facing window (like some apartment complexes, etc.)?
>

If you're in a city, there may be a terrestrial signal booster in your area. Otherwise, eastern and western windows work fine in wooden houses like mine and may work acceptably in some brick-and-steel buildings. If your only exposure is a northern one in a brick-and-steel building and there's no repeater nearby, you won't hear a thing.

Howard

With WINAMP 2.x, there;s a plug in called "Sound Solution" that will do anything you need, Also get the SqrSoft Advanced Crossfader plugin.

If you're not running Winamp, consider OTSDj.

If you're running somehting else, then you're on your own.

All,

I know this is a longshot, but I'm hoping someone out there happened to be taping WMAL (AM-630 in Washington DC) during the hours of 6am to 7:30am EDT on Monday, April 28th 2003 (yesterday).

I'm seeking a recording and/or a transcript of the Morning News show with Andy Parks, Bill Press, and Jane Norris.  WMAL has a general policy of not providing recordings or transcripts, and the Radio/TV Monitoring Service in DC doesn't start recording until 8am.

If you have any idea where I could find what I'm looking for, I'd greatly appreciate your assistance.

Regards,
Rob

news:b8lrsj$ci8$1@xuxa.iecc.com...

> Also, I have a question or two.  Are either one of these services
> going to have more than the present 100 channels?

Unlikely, as they are already squeezing pretty hard to compress 100 channels
into the available bandwidth.  They have both slightly changed their channel

mix over the past year. I'm sure these small changes will continue. More channels mean more employees mean more losses at the present time.

> Secondly, is there anything under development or is it just that there
> may not be a way to do this: That is, make a portable 'walkman' style

> or car or whatever where you can't use or have access to an outside
> antenna setup?

Two problems. The sat radio chip sets still eat a LOT of power so the batteries in a tiny walkperson wouldn't last long. IMO, you'd have to be close to a repeater to get an adequate signal in a bus. While XM may have dozens of repeaters around each of the largest cities, one can assume that Sirius has about 1/10-th as many.

> Also, when setting up either service in the home, do you need to be
> near a south-facing window and if not, how can one get reception
> without having a south-facing window (like some apartment complexes,
> etc.)?

I had my XM antenna in a SE-facing window (I'm on the East Coast) and sigs got spotty on wet days. Now it's on the mantle in the living room, in the center of the house, and works fine. I have a friend who lives on the "wrong" side of a lower floor of an appartment in Washington, DC. He gets fine XM reception, but it is surely from a repeater.

I'd guess that the situation with Sirius is quite different since their sats are constantly moving. At times the two visible sats are essentially at the same point over South Dakota. At other times one of the visible sats is over northern Hudson's Bay, Canada, and the other is either over the Caribbean or way off the western coast of Mexico. Which window should I choose for my Sirius antenna? Since their sats are at a high-ish angle, the sig might get in through the attic of a one-story house - unless the attic insulation has foil backing.

I don't have the pat solutions, but I hope the above has shed some light.

The father of Boston talk radio died last night at the age of 79. Started in the late '50's on WMEX/1510 and subsequently WBZ, WRKO, a few others  and another WMEX.  He also relocated to Chicago briefly in the late '60's.  He pulled no punches.  Remember the seat belt issue? Although he believed in seat belts he felt it was a violation of personal rights to make them mandatory.  As everyone of us in Massachusetts knows, a compromise was reached.   The family has invited all of his fans to attend the calling hours on Thursday.  Classy gesture.

G'Day !

Is there anywhere, where I can get my hands on a copy of the Maestro manual.

I am looking for employment as an announcer and would like to have some back ground knowlage to this system, as it is the most widly used system in my market, and most markets in Australia.

Kind Regards
Mike Marriott

I'm not sure a broadcast processing chain is the best for Internet
streaming. In particular, coding schemes such as mp3 do not handle
clipped audio very well. My suggestion is to apply some AGC but
nothing else.

I see that you are obsessed about airchecks and memoribilia. Is this for US
radio only? If not on www.rni220.nl you can find airchecks off one of the
best offshore radio stations ever.

PF.

What compromise? Seat belts were voted out, then legislated back in. I still remember the sign on I-84 at the Connecticut-Massachusetts line: "Buckle Up. Massachusetts Suggests (slapped over "Requires") the Use of Safety Belts."

DCRTV.com is perhaps the best place to get someone to help you out
with this.  You can check out their mailbag (scroll down and it's in
the text links on the right), and perhaps posting a message there
would get someone who could help you...

Sirius is more reliable on long trips.  XM relies more heavily on repeaters  for urban penatration but suffers a bit out in the hills. Content is a personal choice, so you better go to their web sites and give both a good listen before you plulk down your cash.

It was very much apples to apples, and if you think about it, you will realize why.  I know very well how satellite works, and this was an excellent A-B.

I could compare because I was using the same system and the same connection, albeit in different ways.  Let me explain:

The Ai-Net signal from the XM Alpine unit comes in through a proprietary cable at the AI-Net interface.  The panasonic came in through RCA connection to an auxiliary Ai-NEt adapter Alpine sells.

The only difference could be in the way that Alpine or Panasonic treated the voltage or other attributes of the signals being output by their units.  In that case, there are two possibilities:  first, XM has poor sound quality, or second, Alpine's XM unit stinks.  Of course, it could have been a mixture of the two.

Bottom line is, the Panasonic CR-SRF100 (CR-SRT100) pushed an infinitely better signal under exactly the same conditions.

Hope that helps.

If you live in Los Angeles, you could've heard both Kiley and Booms. Kiley guest hosted on The Loose Cannons show about a month ago. They've had a bunch of fill in hosts, trying to find a replacement for the guy that left. Kiley is pretty boring without Booms. But they had good chemistry together. Anyways, today Booms guest hosted on the Loose Cannon show and he's going to be on tomorrow as well. It was pretty funny. Booms of course took his shots at Kiley, except he refused to call him by his name. He called him his "ex" or "the other guy". And asked why Kiley appeared on the show before he did. A bunch of callers called in and wanted Booms to be the permanent co-host. Of course, there were those who hated him as well.

Is there a program or DJ you want to hear on it?

If so, sign up. If not, don't waste your money.

I've tried one of the two services and it really didn't have much to offer me, and I am not a fan of voicetracking/taped programming so I didn't like it. I also don't like repeating annoying clips/promos between songs instead of live DJ's. Your milage may vary.

THAT is the problem. Satellite radio is a rebroadcast of everything from FM stations to TV channels. They could have done SO much innovative stuff, but instead, we get the "Playboy Channel" which is occasional audio from the TV channel.

I don't understand why anyone would pay $10/month for the channels currently available from XM/Sirius. I was expecting much more when I first read about the services years ago. I was expecting like HBO quality stuff for my radio. Full length CD's. Live concerts in their entirety. 1st class DJ's/programs. Not a bunch of voicetracked stuff and talk shows I can already hear on AM/FM.

They don't even carry the top rate AM/FM shows for $10/month!!! It's like second rate stuff!

Was it really a better signal, or was it just louder??

On my Pioneer I have the direct connect XM and the AUX adapter with the SIRIUS.... They are NOT the same audio levels!!!

But my Pioneer has a feature where I can adjust the individual volume levels so that they both are equal... I dont hear any significant difference in sound quality at all..

My guess is YOU are being FOOLed by the slightly different audio levels and you think the louder one sounds better....!!

Dont feel bad, folks are fooled by the high volt headunits the exact same way...

See ya

WCBN WILL DESTROY YOUR FEEBLE FORMAT

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Maybe swiss public radio is the only place on earth, where the
newsroom system BASYS still is in daily and heavy use? The hardware is
almost antique, the operating system also. but basys is - still great
(call me outfashioned, but it's fast, lean, integrated, easy to use,
all in one place, and all that without ever touching a mouse. if speed
really counts, almost nothing beats basys...). but: there is no more
support for this system. not really. if i got it right, basys was
bought by avid 1994 and then somehow given up and forgotten as a
unix-based newsroom system. as far as i could find out, here it runs
on DEC hardware running ultrix.

Here comes my question:

Does anybody out there have a copy of the sourcecode of basys?

Or do you know someone who might know someone who has it? Or do you know whom to contact to check for the copyrights? Or do you know someone who could decide to release the sourcecode to the public?

the aim would be: make it run on a modern Linux or *BSD Unix. I bet this would be possible. somehow... why? basically i want to avoid this bloated, overloaded, ugly and slow all-in-one windowsbased newsroom- and audioediting- and broadcasting-tool (of which i will not tell you the name), that threatens to take over my PC very soon in the course of a so called upgrade. at least partially. at least for the newswire-, planning-, adress-, show-preparation- and shortmessage-part. I do accept that you can't reasonably edit audio on a unix terminal-session... but for all the rest, i prefer basys, i admit.

looking foreward to any response here and to my e-mail (please!)
thanks!
Patrik

I'm sitting on the fence. I'd sign up for either service if the equipment were cheap, or if there were a smaller monthly fee. I like the idea of getting my favorite programming no matter where in the US I happen to be. Also, I haven't seen a portable setup that I could carry when I'm not in a vehicle. Please inform me if I'm wrong about portable equipment.

Your guess is wrong. This Alpine unit has level controls, as well, and I HAVE A MULTIMETER AND A DECIBEL METER, AS WELL, NOT TO MENTION A BRAIN THAT KNOWS HOW TO USE THEM. So it would appear, THAT I AM NOT BEING FOOLED.

Now, if we are done shouting at each other and insulting each other's intelligence, maybe we can move on to something productive.

In addition, I was able to test these units on a home stereo amplifier, and, though there was some slight signal difference, of course, it was embarrrasingly clear the Sirius sounds better. I'm not into being a fanboy, I'm just calling it as I saw it, and I was very careful to make an equal comparison.

LJD

It's alive & well.

It has become what's now known as Avid iNews.
http://www.avid.com/products/inews/ .  The webpage says the platform is
WinXP but that's the clients - the servers run on Unix.  Irix and SCO to

be specific.

I'm not 100% certain it still supports the old Wyse terminals - haven't tried one for 3-4 version upgrades. They said they were going to phase those out but I don't recall hearing that they actually did.

Look around that avid.com URL and I think you'll find someone you could ask. However, I would be quite confident the chances of getting the source are zero.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

That's what I've read.  I would be using the Ogg Vorbis codec to stream,
but I'm sure it's no exception.  If I were to avoid clipping and stick to
compression and limiting do you think the results would be decent?

<<Where is the family observing the memorial?>>

Visiting hours are [tomorrow*], from 2 to 4 p.m. and from 6 to 9 p.m., at Carroll Thomas Funeral Home, Hyde Park. Funeral services will be private.

*This was in a Boston Globe article dated 4/30/03 so, in this case, I assume "tomorrow" means 5/1/03.

Lee

I thought Kiley and Booms were great together, and I really enjoyed their
show on Fox.  But alas, it is radio, and the suits never seem to leave a
good thing alone.

Only a couple of XM channels are terrestrial stations, picked mostly for
their star-power. All the rest are XM specific products.

>
> I don't understand why anyone would pay $10/month for the channels

Prohibitied by the Digital Millennium Copyright Act. Not just XM, Sirius and
all streaming audio sources.

> Live concerts in their
> entirety.

XM does unpluggeds and stuff from one of their several performance studios.
Artists generally don't license concert performances, and the copyright act
prohibits this... for XM and any other digital source.

Radio legend Jerry Williams past away today at Massachusetts General Hospital in Boston. He was 80 years old. Jerry was one of the originators of the talk radio format and Larry King would call him for career advice, Howard Stern would listen with awe when he was a college student. He was a pioneer at political activistism in radio as he campaigned against seat belt laws, tax increases, and he called Boston's Big Dig an albatross a decade before it was widely known as a boondoggle.

He was able to give legendary monologues and always was respectful to those who called his show, giving them enough time to actually talk.

He was a talk show host in Chicago, Philadelphia, and Boston and the originator of the National Association of Radio Talk Show Hosts. Williams was inducted into the Radio Hall of Fame in 1996.

>To call a blind person "a blink" is similar to calling someone by an ethnic
>slang name.

Hmm. I had never heard that before. I've known many blind people in my
life and that would never have occurred to me. I don't usually call
people by ethnic slang or physical slang based on physical traits,
anyway.

When I was a kid the guy who got me interested in Ham Radio was blind.
He was involved with many of the early moonbounce experiments and did
a lot of work with the government on experimental projects, satellites
included. He was so good at what he did I never though of him as
limited in any way.

I have a dear friend who is deaf and he gets frustrated that I think
of him as "normal" as anyone else and often forget to face him so he
can read my lips. I don't do it intentionally. He seems to live life
so normally that I forget I need to make that extra effort for him.

I'm confused. Are you saying the format would have a better chance on
a low power facility than on WNEW? WNEW is a full power New York
station.

I might do that, but it is so hard to keep the dish aligned with the
satellite when you're driving down the road :-)

I sucked it up and got the Delphi unit because it was small and
portable for my needs, the boom box in the vehicle and the cradle to
my Bose at home.

I, likewise, didn't particularly want to support CC, but I did it
anyway.  They say that XM has about 500K subscribers to Sirius 30K.
As far as the channel lineup, I wanted more talk and less music.  When
Sirius comes out with the smaller unit, I'll patch my bleeding edge
wound and get the other one, or both.

Rob Ashard <rob@ashard.freeserve.co.uk> wrote:

"Is XM solid music or does it have DJ's?"

Their pop music channels have DJs (and jingles); I'm not sure about their classical channels.

"Is it subscription financed or does it air ad's (or both)?"

AFAIK the channels XM produces are commercial free, but some channels coming from outside producers have commercials.  Under FCC rules XM and Sirius can only offer subscription services, so not even the commercial-supported channels are free to air.

Been using Sirius since April 2002 when it became available in the NYC area.  It clearly has the the best music choices and on the open road beats the shit out of XM with solid reception.  XM is only good near the cities where their repeaters are but once you get 20 miles out there's lots of breakup.  Sirius radio sales will pick up once they ramp up their advertising.  They won't go out of business and the worst that could happen is they could be taken over by another company.

Anybody know any history of WNRC-TV?   I found it on USGS map, at 41� 24'
42"N, 73� 07' 48"W - SOUTHBURY, CT quad  between Bridgeport & Waterbury.

(I assume no relation to Nichols College WNRC*95.1 Dudley, MA). I've search the web, found no reference , and haven't been able to correlate it to any station current or past.

I'm a DX'er who likes to plot sites, and calculate AM patterns, coverage maps, etc. This one eludes me, so any ideas would be appreciated. Thank You.

Bob Sutherland, Waltham, MA

How do these compare to normal FM/AM broadcast radio services in the
States?  Advertising at those levels isn't heard of in our radio
market... 15/20 minutes an hour of adverts - a quarter/third of output!
  Argh!

How do you know that serius is better when you dont have XM to compare it to???

I have both and on the open road they BOTH have great reception ...
I have used mine all over texas !!
AND I DO HAVE BOTH!

I still expect Sirius to be taken over by Clear Channel.  Clear Channel has a rather minor investment in XM (about as much money as a couple of FM stations).  They could afford to throw that investment away if Sirius becomes available on a bankruptcy "fire sale".

I have the Pioneer FM modulated XM unit in my 2001 Ford F150.  I've had the service for over a year; I commute from RURAL central Virginia into the Washington D.C./Dulles technology corridor everyday - almost exclusively on two-lane back roads, avoiding the interstates at all costs.  I'm clearly NOT near their repeaters for the majority of my drive.

I have NEVER lost signal for more than a few seconds, and usually this is caused by being trapped under an overpass in congested traffic (where my "view" to the satellite is obviously obscured).  Even on country roads in Orange and Louisa counties (i.e. - the middle of nowhere) with thick overhead foliage, I've never lost signal.  I have never experienced any of the "breakups" you describe.  Perhaps you had a poor installation?

There are some improvements that XM could make in the programming - a better variety of country music is one.  But the Pop/Rock/Comedy/Jazz/Dance (I love BPM - 81) content is superb.  If you take the view that XM is like your cable television provider - there's a lot more variety and a lot more good content than you get for free over the air.  For me, it's definitely worth the $10/month.

Cheers,

Jeremy Powell

Thirty-seven of XM's 61 music channels have advertising:

7--Seventies (oldies)
8--Eighties (oldies)
11--Nashville! (Today's Hot New Country)
13--Hank's Place (traditional country)
20--Top 20 (continuous countdown of Top 20 most requested songs from CHR playlist on XM site)
21--KISS (simulcast of KIIS-FM LA)
22--Mix (simulcast of Mix in Houston)
23--The Heart (soft AC)
24--Sunny (easy listening)
25--MTV (simulcast of web radio)
26--VH1 (ditto)
27--Cinemagic (music from movies)
29--Upop (Worldspace global pop music channel)
41--Bone Yard (hard rock)
42--XMLM (metal)
43--XMU (college radio/indie rock)
48--Squizz (hard modern rock)
52--Unsigned (artists unsigned to major labels)
60--Soul Street (urban oldies from 50s-70s)
61--The Flow ("neosoul" like Alicia Keys and India.Arie)
62--Suite 62 (urban AC)
63--Spirit (gospel)
64--The Groove (urban oldies from 80s-90s)

66--Raw (hip-hop)
67--The City (urban hits)
72--Beyond Jazz (fusion jazz too loud or too jazzy for "smooth jazz" NAC)
81--BPM (dance hits)
82--The System (electronica)
90--Aguila (Spanish hits)
91--Caricia (Spanish AC)
92--Vibra (rock en espanol)
93--Tejano
94--Caliente (Carribean)
100--World Zone (world music)
102--Nouma (African)
115--Radio Disney
116--XM Kids

The interesting thing about the list is that it's not all "mass appeal" channels, as I would expect (I didn't expect the metal channel and some of the modern rock channels to have advertising). Interesting that the majority of the urban channels and the "hits" (CHR/AC) channels and all of the Latin and children's channels have advertising, while most or all of the jazz and classical channels don't.  And for those who'll go into the kneejerk remark "$9.95 a month and there's still commercials?", in most chances I believe it's only around five minutes an hour.

On the other hand, all of Sirius' music channels are commercial-free--no exceptions.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

>clearly has the the best music choices and on the open road beats the shit
>out
>of XM with solid reception.  XM is only good near the cities where their
>repeaters are but once you get 20 miles out there's lots of breakup.

Pure, unadulterated Horse-Pucky!  I have mine in my house and two cars, in Peacham, VT...where we get one semi-decent NPR signal and no other radio worth listening to.

Have driven south to NJ...east to Boston and Portland...west to Buffalo and north past Montreal, with NO serious dropouts on XM.  Some local dropouts when behind big stands of trees or large granite rock formations.  Had the same minor dropouts on the Belt Parkway in Queens, NY...no worse than up here in the Northeast Kingdom.

About a dozen people in the area have XM...without it we wouldn't have any listenable radio.

All the negative reviews of XM and Sirius (I've listened to Sirius online...but they cut you off after 20 minutes), come from people who either live in the few remaining areas with a wide choice on terrestial radio...or folks who have never listened to satellite radio.  Once you have the selection and quality, you are hooked.

I worked in professional radio (three stations on Long Island and the ABC Radio Network) for many years...and satellite radio is as good as that ever was.

Now, if we could only bring back Jean Sheperd, Bob & Ray, and Willie B.........

"Mikey" <mikey@yahoo.com> writes:

>I am looking for data on FM SCA transmitting pattern and range of coverage.
>If a large typical FM station transmitting 50KW, one can expect SCA to be
>2.5-5KW.

SCA doesn't work like that; rather, the audio spectrum of a station
carrying an SCA extends beyond the range of human hearing, and a
modulated tone at (usually) 67 kHz or 92 kHz is injected into the
audio going into the transmitter. This information is present in all
receivers tuned to the station, but non-SCA-capable receivers ignore it
and recover only the audible frequencies (stereo receivers recover
also a left-minus-right signal from information centered at 38 kHz).

 What kind of range of coverage can I expect from such a station?
>Thanks for any info.

Anywhere you can get a clean signal from a station carrying an SCA you
should be able to hear the SCA.

Has any one taken one of the Sirius radios for the car and adapted it so it works in a house? I would like to get the Sirius service, but as I am blind and do not drive or own a car, I seem to be left out in the cold.

I thought the whole appeal of QRP was to use extremely low power and see what you could get with it. It seems to me that using the Internet to set something up in advance defeats the purpose.

RADIO HONORS: DAYTON HAMVENTION 2003 AWARDS ANNOUNCED

The judges have made their decision and now the Dayton Amateur Radio Association announces its Hamvention award winners for 2003. We have this report:

--

He gave the world of Amateur Radio "Kids Day." And now, the Dayton Amateur Radio Association has decided to reward Larry Tyree, N6TR, of Boring Oregon, by naming him 2003 Radio Amateur of the Year.

We caught up with N6TR a few hours after he learned he had been selected. He says that the award really honors what Kids Day is all about:

--

Tyree: "Its really been incredable just seeing how its taken off on its own and I am very proud to have come up with the idea and done the initial sponsorship of it."

--

Tree, as her prefers to be known, was first licensed in 1967 as WN6ZVC. He obtained his distinctive N6TR callsign in 1977 and these days holds an Amateur Extra Class license.

Tree grew up in Los Angeles' San Fernando Valley but moved to Oregon in 1984. And long before he created Kids' Day, Tyree was immersed in almost every aspect of the hobby. He is an avid contester who can regularly be heard on all bands from 160 through 6 meters.

Tyree also spends a lot of his ham radio time in front of his computer on ham radio related matters. Why all of the computer time? It's another of his many contributions to Amateur Radio. Tree Tyree is the creator of the very popular "TR-LOG" contest logging software.

But what about "Kids Day?" How does a contester and ham radio software writer come to create a twice yearly operating event specifically designed to introduce ham radio to the younger set? You have to start by realizing that Tree Tyree is first and foremost a parent himself.

--

Tyree: "I think the ingredient that helped enable this is that I have my own kids. At the time when Kids Day was invented they were 3 and 5 years old. And I just somehow flashed on the concept of -- well -- lets get kids on the air and have them talk to other kids. Lets just make thaty happen. So, under the guise of the Boring Amateur Radio Club, we put that together and made it happen. I think that the first one was just an hour or two hours and the response was pretty signifigant."

--

But how do you keep it interesting for youngsters?  N6TR had an answer for that too:

--

Tyree:  "I think the other important ingredient to the Kids Day concept was to give the kids something to talk about as a formulia that they could work under so that they have something to talk about.  And thats how we came up with the idea of the simple thing of your name, and your age, where you live and your favorite color. "

--

Tyree envisioned "Kids Day" to be what it has evolved into.  That of a ham radio social event for the younger set.  One where experienced operators open their hearts and his ham stations so that youngsters can get on the air and enjoy the fun of talking with other kids through the magic of Amateur Radio.

But Tree Tyree is not the only ham to take honors at Dayton this year.  If you are into Echolink, then the name Jonathan Taylor and the call sign K1RFD, is very familiar to you.  This is because Taylor is the ham who made Echolink happen.  And for this important contribution to integrating the world of ham radio with the world of the Internet the Ridgefield, Connecticut ham has been named to receive this years Specific Achievement Award.

For those of you not into computerized ham radio, Echolink is one of a very popular using voice-over-IP technology and linking protocol software system that allowd  Amateur Radio stations to communicate with one another over the Internet.  Using Echolink permits worldwide connections between stations, from computer to station, or from computer to computer.

But Echolink is not Taylor's only contribution to ham radio.  Anorther is his Echo-Station software package.  This gem is a is a repeater-control program designed to run under the popular Microsoft Windows platform.  This makes it easy to set up a complete, fully-functional repeater or "announcement machine" using a personal computer.  In fact, some of you may be listening to this nerwscast over a repeater that is using Echo Station to replay it.

Last and by no means least come Steve Dimse, K4HG, of Cudjoe Key Florida. Actually we should say Dr. Steve Dimse, because K4HG is a Clinical Assistant Professor of Medicine at the University of Miami.  His primary responsibility is that of attending physician in the U M / Jackson Memorial Medical Center Emergency Department.  And in his spare time, Steve loves to play ham radio with an emphasis on the digital side of things.

Among his technical achievemets are his authoring of a number of APRS related internet programs, including, Global APRS,  javAPRS and APRServe. Dimse is also the developer and administrator of the APRS internet database at www.findu.com.

We should add that the world of computers pre-dates K4HG's career in medicine. His undergraduate degree in 1980 was in computer science from Pepperdine University in Malibu California. He then worked as a Programmer for Hughes Aircraft as a Member of the Technical Staff before entering medical school.

With congratulations to all three of this years Dayton award winners, I'm David Black, KB4KCH, reporting.

--

The winners will be presented their awards at a special ceremony to be held at Dayton's HARA Arena on Saturday, May 17th. You can hear more about the plans for Hamvention 2003 with Pat Neff on this weeks RAIN Report. Its on-line right now in streaming audio at www.rainreport.com. Or, if you are Internet deprived, you can dial in on your phone to listen. The number in Chicago is area code 847 827 RAIN. Thats 847 827 7246. (Dayton Hamvention®, ARNewsline™)

RADIO RECORDS: UK HAMS TAKE LF TO MICROWAVE TITLES

Three amateurs have achieved the unusual feat of setting new United Kingdom distance records for bands at the opposite ends of the electro-msagnetic ham radio spectrum. Jeramy Boot, G4NJH, has the details:

--

Derek Atter, G3GRO, and Allan Wyatt, G8LSD, of the Crawley Amateur Radio Club teamed up with David Bowman, G0MRF, to set new distance records for 73 kHz in the LF spectrum and for Laser communications at a wavelength of 670 nanometres.

On the 73kHz band David, G0MRF, drove from London to operate from the QTH of RadCom columnist Simon Lewis, GM4PLM, near Ayr in Scotland. Meanwhile Derek, G3GRO, and Jim Moritz, M0BMU, set up a temporary station at the Cable and Wireless Museum at Porthcurno near Lands End. The two groups had a contact on the evening of the 1st of April over a distance of 610 kilometres.

Four days later on Saturday the 5th of April, Allan, G8LSD, and David, G0MRF, took advantage of a cold, clear night to set up laser communications equipment on the cliffs near Dover in Kent and at Fairlight near Hastings in East Sussex. After three hours waiting for the atmosphere to clear and precisely locating each other, calls and reports of 559 and 579 were finally exchanged. The distance of 49.3 kilometres exceeds a previous record set in 1998. Both stations used modulated CW achieved by switching the laser on and off at 488Hz.

Jeramy Boot, G4NJH.

--

According to G4NJH, when the lasers were aligned they were among the brightest objects on the horizon across the entire 50 kilometer path. (GB2RS)

HAM RADIO AT WAR: AMATEUR RADIO FROM IRAQ - REDUX

Don't be to surprised if you soon start hearing a number of stations signing portable YI from Iraq. Chris Partridge, G8AUU, reports to Amateur Radio Newsline™ from Kuwait City that with the war winding down a number of international news agencies plan on setting up bureaus in Baghdad, Basra, Mousal and other key Iraqui cities.

G8AUU was in a news satellite truck when we spoke with him by telephone on Saturday April 12th. According to Chris, more than a small number of the technicians and engineers serving at these bureaus will be hams. This includes a satellite engineer from Polish TV, some French hams working for Globecast and a number of others that he knows of. G8AUU believes that its only a matter of time before some of them get ham radio gear and take to the air -- portable YI -- from Iraq.

The news from Chris Partridge, G8AUU comes only days after The Daily DX and the ARRL Letter reported that Jim Dunkerton, KT4CK, had been active from the Middle East on 15 meters SSB. On April 7th, he was identifying as YI/KT4CK and saying he was in the desert of Southern Iraq. (G8AUU, ARRL, ARNewsline™)

**

ENFORCEMENT: FCC TO CALIFORNIA HAM - STAY OFF THE AIR

A southern California ham has been told to stay off ther air after his license was set aside by the FCC's Wireless Telecommunications Bureau. Amateur Radio Newsline's Bruce Tennant, has the rest of ther story:

--

Recieving the order to cease operation was Drew Feldman, KG6PFC, of Los Angeles.

By way of background, this is Feldman’s second license. Back in May of 2000 the FCC canceled his original N3KSO ticket after he failed to appear for re-examination as directed by the agency.

Later on Feldman did attend an exam session where he passed the Technician class test. It was after that exam that he was then issued the KG6PFC call.

But says the FCC, it set aside Feldman’s latest license grant on March 18th. This, based on what it described as new complaints it received about his on-air operation. The letter did not elaborate on what the exact nature if the infractions are but it did warn Feldman that he currently has no authority to operate any for of Amateur Radio transmitting equipment. That doing so would be a violation of the Communications Act and could mean a stiff fine or even time in jail.

For the Amateur Radio Nerwsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

No word as to weather Feldman plans an appeal. (FCC)

**

ENFORCEMENT: REPEATER PROBLEMS IN N.D.

If you thought interference to repeaters are just a big city phenomena, guess again. This as a North Dakota ham receives a warning letter from the FCC. The agency’s Daryl Duckworth, NN0W, has the details:

--

Duckworth: “Erin Rourke, N0KCN, of Fargo North Dakota, was issued a Warning Notice concerning deliberate interference with the KC0SD repeater systyem on 146.060 Mhz in the Fargo area. The interference has consisted of unidentified transmissions, tones, and the playing of music.”

--

In its letter the FCC warned Rourke that continued incidents of such interference to the KC0SD repeater or to any other Amateur communications will subject him to license revocation and suspension proceedings, as well as a hefty fine. (FCC, RAIN)

**

ENFORCEMENT: PAY TV PIRATES INDICTED

A federal grand jury in Los Angeles has indicted 17 people who authorities say hacked into satellite television transmissions, causing millions of dollars in losses to DirecTV and Dish Network. The U.S. Attorney's office says that six of the defendants were charged with violating the anti-encryption provisions of the Digital Millennium Copyright Act. The other charges involved conspiracy or manufacturing a device for the purpose of stealing satellite signals. All three counts carry a maximum sentence of five years in prision.  (Published news reports)

**

RADIO LAW:  UTAH GOVERNOR SIGNS PRO ANTENNA BILL

Utah became the 17th state to pass a PRB-1 like law.  After being sponsored by Representative Neal Hendrickson the measure went to the states legal department, then to the house sub-committee where it initally died.  But Representative Hendrickson revived it and after John Hanson, KI7AR,  testified on its behalf the measure sailed through both the house and senate.  It took another 63 days for the Governor Mike Leavitt to sign it.  He has -- and it becomes Utah state law on May 1st.  (KD7FQD via QRZ.com)

**

RADIO LAW:  ISRAEL ACTS TO PROTECT HAM ANTENNAS

Utah is not the only place thats protecting the rights of its radio amateurs when it comes to towers and antennas.  So is state of Israel.  Bill Pasternak, WA6ITF, has more:

--

Hagal International is the English language edition of the Israel Amateur Radio Club’s newsletter.  And Hagal reports some good news for that nations hams.

According to the newsletter, Israeli cities and municipalities may no longer prohibit amateur radio antenna structures on for reasons of zoning.  In other words, hams cannot be denied anteenas just because neighborhoods want to be free of what they view as unsightly antennas.  Thats the good news, heres the bad.

Hagal goes on to say that the legal erection of an antenna and support may still not be the easiest task.  A building permit must still be obtained after submitting the plans to be signed by a construction enginee.  Also, there must be an authorization from the Ministry of the Environment showing that the antenna does not emit dangerous radiation.

But Israeli hams say that this PRB-1 like legal change is a first good step, and nobody is going to complasin.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The next step will be to try to get the Ministry to ease some of the environmental restrictions Israeli hams currently face.  (Hagal International, IARC)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: DOOROUGH HOLDS ON TECHNICAL ASPECT OF NEW AM SCHEME

Noted audio innovator Mike Dorrough, KO6NM, called off a special presentation of a new technology slated at last weeks National Association of Broadcasters convention in Las Vegas. Amateur Radio Newsline’s Paul Courson, WA3VJB, has the reason why:

--

Mike Dorrough, KO6NM, had planned to announce details of an enhanced technique to improve the loudness of full carrier, dual sideband AM signals. But his lawyers said -- wait a minute -- you do not have patent protection yet. So, as the patent attorney process continues, the speach is delayed.

As previously reported on Amateur Radio Newsline, KO6NM has told fellow A-M enthusiasts he intends to share some of his experiments on H-F, and that he will invite their comments and analysis on how the system sounds with basic voice audio waveforms such as those in amateur service.

Dorrough believes that his new technical scheme holds promise to increase the already warm and inviting sound of AM among vintage hams, who could deploy the audio on new or old transmitters used on HF.

Even though their gear may be old, these hams are actually on the cutting edge of technology in improving double sideband full carrier A-M transmissions. More than 100 retired broadcast transmitters are known to have reached private hands, with most of them now restored and operating on 160, 75 and 40 meters across the United States. In addition, a number of homebrew buffs have constructed solid state "Class E" transmitters which offer outstanding audio quality and simple design

Dorrough, who is best known in the broadcast industry for his creation of the L-E-D Audio Loudness Meter is also a prominent member of the AM Amateur Radio community. He is active on the short-wave ham bands and is often heard running one of a variety of retired broadcast transmitters he has restored on 160 and 75 meters. He has been worked coast-to-coast when in California, as well as from his second home in Wisconsin.

For the Amateur Radio Nerwsline, Paul Courson, WA3VJB, Washington.

--

According to reports, Dorrough was encouraged by his attorneys to delay his remarks until the patent issue is resolved.  As soon as they are and KO6NM schedules another presentation, Amateur Radio Newsline will bring you the details.  (WA3VJB)

**

HAM RADIO IN SPACE:  AMSAT ESTABLISHES ECHOLINK CONFERENCE SERVER

AMSAT has announced the opening of a new Echolink conference server as a new service from its amsat.org website.  A conference server uses voice over I-P technology and allows many operators, links, and repeaters to share the same conversation in real time.

The new AMSAT conference server was established to provide a place for satellite operators world-wide to congregate and chat.  The server is up continuously and all amateurs are invited to connect and give it a try.

More information about the *AMSAT* EchoLink conference server is available at http://www.amsat.org/echolink  (ANS)

**

ON THE NET:  NEW TEMPORARY MAREX-NA URL

Miles Mann WF1F, has announced a new website address for his Manned Amateur Radio Experiment or MAREX N-A group.  The temporary U-R-L is http://wf1f.home.attbi.com.   Mann asks that you delete any bookmarks you have for the old MAREX website which was pirated away by a foreign web host company some 30 days after it was renewed here in the United States.  (WF1F)

INTERNATIONAL - IARU:  THREE NEW MEMBERS WELCOMED

The International Amateur Radio Union has admitted three new member societies. According to an ARRL Bulletin, the new members are the National Association Radioamateurs of Georgia, the Federation of Radiosport of the Republic of Armenia and the Vietnam Amateur Radio Club.

The IARU was founded in 1925.  It is a worldwide federation of national Amateur Radio societies with members in 156 countries and separate territories.  (ARRL)

**

INTERNATIONAL - CANADA:  NEW RAC BOD MEMBERS

Radio Amateurs of Canada has announced that Ian MacFarquhar, VE9IM, was elected by the RAC Board of Directors effective February 17th.  MacFarquhawill fill the unexpired term of First Vice President, vacated by Joe MacPherson, VE1CH. (RAC)

DX

In D-X, DL8EBW reports on an upcoming all VHF DXpedition to a pair of Norway’s most wanted grid squares.  The VHF-DX-GROUP will activate both JP-43 and JP-33 in Western Norway on both 6 and 2 meters looking for meteor scatter, tropo and aurora contacts.  The call sign to be used is LA6K. Modes will be HSCW, SSB and FSK 441 with the time frame of the operation centered around the IARU contest.  For more information and the sked list please check www.qsl.net/la7dfa on the World Wide Web.  (VHF Reflector)

THAT FINAL ITEM: RESCUE RADIO PLANNING -  ECOMMWEST 2003 IN RENO

Our old friend Neil Mc Kie, WA6KLA, reports on an up-coming emergency communications event on Saturday, May 31st to be held in Reno Nevada.  Called EMCOMMWEST 2003, the event is jointly sponsored by the ARRL Nevada Section and Northern Nevada Amateur Radio Services, Inc.  Speakers include Jim Utterback, KC6TWC, Disaster Services Manager for the Reno-Tahoe Chapter of the American Red Cross, Alex King, Disaster Services Coordinator for the Salvation Army in Reno along with Nevada ARRL Section Manager Dick Flanagan W6OLD and numerous others.  More about this important rescue radio planning event can be found on the web at www.cvrc.net/emcommwest  (WA6KLA)

My partner at work would argue with the breakup story.  He loves his XM and
only looses it under some  overpasses.  (He also lost it in mid-continent on
a coast-to-coast trip, maybe transitioning between satellites; simply
switching his unit off and back on made it work.)

He commutes daily from Temecula, California, to San Diego, through rural
areas that probably have no repeaters at all.  Since I don't know the signal
strengths in these areas or the hardware in use or the quality of the
installations, I'd be a fool to go much beyond what I've said.

Probably your best bet is to use the FCC coverage calculation site:
http://www.fcc.gov/mmb/asd/bickel/curves.html
treating the SCA power as the power you wish to calculate coverage.    you
do also need the height above average terrain (HAAT) for this site.  you can

select it output in miles if you input HAAT in feet.

What commercials on Sirius are you talking about? There aren't any on the
music channels and there aren't any of these really long comercials that I
hae heard on the talk channels. Which channel?

By the way, if people are buying so many more XM units (and, agreed, XM has
more subscribers), what reasons are they citing. I know most of my friends
prefer Sirius, but have Alpine head units and so went with XM...

Were the A-B systems used for comparing the XM and Sirius compared using the
same speakers, etc.? Obviously the head units are probably different...

Personally, I really dont think XM outsells Sirius because the programming
or sound quality is better on XM. I stopped by BestBuy, yesterday, and I
think they must be hella paid to push the XM because that's all you hear
about. Seems like more Clearchannel bully-monopoly pressure to me.

Anyway, glad to see the discussion forming!

I like NPR, but like the next guy says, you can get them in every market
(although some program times vary)

But I'd rather got go with a company that says they only have enough money
to make it to June. They may go belly up this summer.  Maybe eventually XM
will pick up NPR and add a couple more channels...

Theoretically, the pattern should be the same as the main signal,
after all, it's the same antenna.
As for power, it depends.
FM is line of sight, any obstructions will degrade the signal and the
lower the transmit power, the greater the degradation tends to be.
If it's a clear shot on the prairies, you could even get up to 75
miles, which, with the curvature of the earth, is about maximum for
any terrestrial FM.

Sirius spent something like $60 million last year in advertising; if did not
seem to do them much good.

I have driven outside metros extensively with XM; the only dropouts are
occasional ones for a fraction of a second in heavily shadowed urban areas.
On the freeways, I have never had a dropout going between LA and Phoenix,
Albuquerque,Las Vegas, San Francisco, Fresno and San Diego.

Clear Channel owns about 6% of XM. The big owners are GM and Honda, with nearly half the company. Next are several mutual funds, then some of the interested broadcasters like CCU, HBC and Radio One.

Plug in the frequency with no other restrictions and you will get the list, right from the source.

Yes, you can do this with a Jensen SSR2000; it's a universal add-on tuner with a CB-mike style LCD-display controller and RCA plug outputs to your stereo amp.  You'll need a 12-vdc power supply that simulates a car's; you can splice the tuner's power wires to a cigarette-lighter plug and get maybe get power from one of the Radio Shack bench power supplies that accept that plug. I actually get the 12-vdc from my computer.  A Lian-Li removable hard drive rack from Computergate.  Several trays: one with a back-up hard drive, one with a Zip disk, and, when I'm not using those, one with the 12-v pair of power leads spliced to a cigarette-lighter receptacle for the Jensen.  Don't use a wall-wart for power, and ground the antenna without fail.  Jensen has nine one-button presets and 11 two-button presets.  Works great.  Note: when activating, be prepared to tell Sirius the VN of the vehicle you've theoretically installed the unit in.

I'm on the lookout for an Inovonics 255 Audio Processor if anyone knows of one for sale. I live in the UK & these particular units are not as common over here as they are in the US, also I'm told the second-hand market is slightly cheaper than here in the UK. What price (second-hand) do these units go for??

If anyone knows of such a unit for sale, please could you reply to this thread & we'll make contact! At least, can anyone point me in the direction of a good 'surplus Broadcast' supplier.

Regards

Neil

It's fine on the Ohio Tpk.  You might get a second or so dropout on the Penna Tpk, and also in the tunnels.  I've driven DC to Dayton, DC to Detroit, DC to Cleveland and coverage is 99.99% perfect [6 seconds in 60,000 seconds].  I'd say no more dropout than 5 seconds + tunnels on your likely route.

There are a couple of places on I-68 in western Maryland where you are on the wrong side of a steep hill where the XM sig goes out for a minute or so. These really are beyond the middle of nowhere.

I am neither an employee nor investor of/in XM.

My decision to go with Sirius over XM was dictated by these factors in order of importance to me:

1. Channel offerings--the availability of two NPR channels, one PRI channel and the World Radio Network on Sirius trumped XM's offerings in this regard. Both have C-SPAN and each has a BBC World Service channel (variety on XM; news on Sirius). Both have more than an ample variety of music and other specialty channels.

2. Technology--without the ability to sample each in a controlled test, it appeared to me that Sirius' delivery system would be more reliable, (1) given its need for only 100 terrestrial repeaters and XM's need for up to 1,000; (2) fixed low elevation satellites (XM) vs. a system designed to have at least one satellite overhead at all times (Sirius).

3. A commitment to media not dominated by advertising interests (Sirius) vs. a lesser commitment in this regard (XM).

I've had Sirius since January and I agree wholeheartedly with the comments that say once you've actually subscribed, you'll wonder how you did without it. The 12.95 a month I'm paying is money well spent. This is how radio should be.

Probably more what you want though, a what-am-I-hearing question,
http://www.radio-locator.com

type in your zipcode to get a useless list of local stations.

But at the bottom of that page, the useful part: put in 1270 and
a distance in miles, and it will list all stations on 1270 within
that many miles with their distances and bearings.

So your zipcode had some use after all.

Speaking of which, what happened to Kevin Kiley?  Fox appearantly gave Chuck Booms the boot and Mason started sitting in.  Kiley went on and on how he and Booms had seperate contracts, then one day Kiley was gone.  For the longest time the new guy said he was sitting in for Kiley, but as far as I know, Kiley never returned.  I stopped listening.

John A. Figliozzi:

I thought you were into world band radio only!  The way I look at it, XM and Sirius will probably either have a very short product life cycle or be used exclusively in cars and trucks.

Here's why - the Internet.  I wouldn't give 2 cents for the long-term viability of radio, television, or newspapers as we know it today, the future is on the world wide web.

Now, how to make web-based multi media profitable is for another thread...and day.

BTW, I've sold all my short wave radios except for my Sangean ATS 606, I'm not investing another dime in this technology when most of my favorite programs are now available on the web using Real Audio.

Hello,

I am presently trying to start a part 15 AM/FM station and i am looking for any old equipment you may have lying around the station that you want to get rid of. I am looking for transmitters / exciters, AM / FM, solid state, or hybrid, Crystal or PLL, 50w or less. Please note the tx's will be backed down to P15 levels(250uV/m@3m FM and 100mw input / 3m ant AM). Also looking for carts, tape decks, boards, mic's, etc. Don't care working/non-working will fix if need be. so engineers dig up that old stuff you don't know what to do with and i'll put it to good use. I live in an apartment and the complex is on a couple of acres so P15 AM / FM will work great for this purpose. I am a licensed amateur operator and do not wan't to jepeordize my license with pirate activity. So rest assured this will be operated under P15 rules. I can travel 100mi from 08826 to pick up stuff.
I will take anything you can spare as long as it fits in a toyota corrolla.
I am trying to do this as a public service to the other tennents and it will be non commercial.

Thank You,

--
Rev. Robert P. Chrysafis (kc8gpd)

LP    FL    NEW MEXICO STATE HIGHWAY AND
TRANSPORTATION DEPARTMENT    ROWE    NM 20010612AFX    New
```

Some interesting things to note.

The call letters all are derived from the town names that they are located in.

Upon looking at the FCC's LPFM page, there are two other states that have a stack of these LPFMs that have been granted CPs or are pending apps.  Those two are New York (two agencies) and Iowa.

These look like they were all approved at the same time, or in two groups.  Also, does anyone know whether any of the New Mexico stations have actually hit the air and if so what is the programming?

I had XM installed in my car for a while and really liked it. It had great sound quality overall. I recently switched over to Sirius because of the "Commercial Free' music channels. Holy Cow! After listening to Sirius for about a month now...the Sirius programming is sooo much better. The DJ's offer insight into the songs (which i really like). The XM DJ's reminded me of annoying FM DJ's. I also think that Sirius sounds better to my ears. The music seems like it breathes more. Kind of like hearing a regular CD and a SACD. XM has a compressed sound quality to it. Overall, I am ecstatic with Sirius in my car. I am excited to get one of their home units or boomboxes due out soon too. Sirius must love me....because of me showing their system to friends and family...they must have at least an additional 50 subs! I am thinking about investing in the company I love it so much. I think their shares are like under \$1. Unbeleivable! If this thing takes off....we could have the next microsoft?

Phantom circuits and repeat coils are wonderfully fun things to
play with.  They make a lot of sense if you have a pair of
leased lines and need one more.  Or if you own the cable and
would have to install a new 25 pair cable for a few miles.

Repeat coils are actually very commonly available, except they
will be called "hybrid transformer" instead, and they'll be much
smaller than the coils discussed in the URL (which were designed
in the 1930's).

But between rooms?  Running more cable is a *lot* less expensive
and less trouble than trying to multiplex multiple channels.
And if you do have an application where the distance is great
enough to be worth the effort, digital multiplexing would be
much preferred.

Amateur Radio Newsline™ Report 1339 - April 11, 2003

The following is a closed circuit report. Here is Amateur Radio Newsline's support fund administrator, Andy Jarema, N6TCQ.

--

For the month of February we heard from: Monthly contributors Joseph Bartzi, Jr., KC8DKF of Wadsworth, OH, and Scott Hensley of the Area Communications Team, of San Jose, CA. Total contributions were $25, with NO clubs heard from. On the other hand, our expenses were $661.

That doesn't work! We need your help to keep these newscasts on the air!

I'll make you a deal: you send whatever you can, and I will take the next few weeks to catch up on who's been helping us stay on the air over the past year.

A reminder that Am,ateur Radio Newsline™ is a federal, 501 (c)(3) non-profit corporation.  All contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast.  I'm Andy Jarema, N6TCQ.

--

Thanks Andy.  That ends the closed circuit with Amateur Radio Newsline report number 1339 with a release date of Friday, April 11 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia says its time to restructure that nations Amateur Radio Service and ham radio in Iraq.  These stories and more on Amateur Radio Newsline report number 1339 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  AUSTRALIA SAYS TWO LICENSES WILL DO

The Wireless Institute of Australia says that its time to restructure ham radio down-under and that two licenses will do.  David Jones, VK4OF, reports from last weekends W-I-A Annual General Meting in the city of Adelaide:

--
Audio report only.  Hear it at http://www.arnewsline.org
--

Jones' report quotes a press release from Wireless Institute of Australia President Ernie Hocking, VK1LK.  We will have more in future Amateur Radio Newsline reports.  (Q-News)

**

AMERICA AT WAR:  BAGDHAD RADIO CLUB STATION CLOSED FOR DURATION OF WAR

Ham radio will hopefully re-emerge in Iraq after the war has ended.  In the meantime, the Daily DX and the ARRL Letter relay information from Diya Sayah, YI1DZ.  This, on the plight of one of that nations best known Amateur Radio operations.

YI1DZ, is one of the primary operators at the Baghdad Radio Club YI1BGD station in Baghdad.  He reported that just prior to the outbreak of hostilities in Iraq that he had dismantled the station.  Also, that all of the equipment is stored in as safe a place as possible.

Daily D-X Editor Bernie McClenny, W3UR, says that he doubts there will be any activity in the near future from YI1BGD or any other Iraqui Amateur Radio station.  The YI1BGD club station went on the air in the 1970s and the Iraqi Association for Radio Amateurs remains an International Amateur Radio Union member-society.  (ARRL, Daily DX)

**

IN THE PUBLIC LIGHT:  AMATEUR RADIO AT NAB-2003

I'm Bill Pasternak, WA6ITF, in Las Vegas Nevada, where the National Association of Broadcasters Convention Amateur Radio  Reception is just winding down.  An estimated 700 hams involved in the broadcast profession spent the last 2 hours enjoying one anmothers company.  They also heard a brief talk  by ARRL Presodent Jim Haynie, W5JBP, who used the occasion to thank thee Las Vegas Amateur Radio Club for an important monetary donation:

--

Haynie:    "I want  to thank the members for the $1000 donation to the (ARRL) Education and Technology Fund.  We think it is particularly important in as much as the  Big Project as we call it -- in slang terms -- is teaching kids about Amateur Radio who will hopefully be the next engineers at your radio station or something like that.  This exposure to electronics is very important to Amateur Radio and very important for industry.

So with that, have a good time , and again my thanks to the Las Vegas Amateur Radio Club for your vey wonderful and generous donation."

--

Well over 100,000 broadcasters and those in allied businesses attended the 2003 National Association of Broadcasters convention.  Among  them where three friends who hads not seen one another in almost three decades.  They are Dick Flanagan, W6OLD, Martin Geisler, WA6TIC and this writer.  All of us were members of the Palisades Amateur Radio Club back in the 1970's.  Ill be back with more about this radio club after a short airplane ride home.

Annd less we forget.  The N-A-B Amateur Radio Reception was again co-sponsored by Kenwood Communications and CQ Magazine.

Reporting from a quiet alcove just outside the Las Vegas Convention Center on my way to McCarren airport,  I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.  Don.  (ARNewsline™)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,

heard on bulletin stations around the world including the WD9AKO and K9BAR repeaters serving Bolngbrook Illinois.

(5 sec pause here)

**

RADIO LAW:  HAM RADIO CC&R BILL REINTRODUCED IN CONGRESS

Another Congressional attempt is under way to provide relief to amateurs prevented by private deed covenants, conditions and restrictions from installing outdoor antennas.  The ARRL Letter says that New York Representative Steve Israel has again introduced the "Amateur Radio Emergency Communications Consistency Act" into the current session of Congress. The measure, designated HR 1478, would require private land-use regulators such as homeowners' associations to reasonably accommodate Amateur Radio antennas consistent with the PRB-1 limited federal preemption.  PRB-1 now applies only to states and municipalities.  (ARRL)

**

RADIO LAW:  CALIFORNIA PRB1-LIKE LAW TAKES A GIANT STEP

Some good news for hams living in the Golden State.  ARRL Southwestern Division Director Art Goddard, W6XD, says that the California version of PRB-1 passed the Local Government Committee on a unanimous vote at its April 2nd meeting.  Goddard says that the next step for A B 1228 is the full California State Assembly.

Representing ARRL at the Committee hearing were Dean Straw, N6BV and Pacific Director Bob Vallio, W6RGG.  In his bulletin, Goddard took the time to thank Mike Mitchell, W6RW, Assembly member Bob Dutton and his staff as well.  (ARRL SW Div. Newsletter)

**

SPECTRUM SHARING: SATELLITE-FED TRANSLATORS IN THE COMMERCIAL FM BAND

The FCC has assigned RM-10609 to a proposal by Calvary Chapel of Twin Falls and two smaller broadcasters. This, for authority to allow satellite-fed translators or Satellators in the "non-reserved" F M 92 to 108 MHz band.  Amateur Radio's Bruce Tennant, K6PZW, has more.

--

As we all know, 92 to 108 Mhz is the band that is currently used by commercial broadcasters, over-the-air-fed translators and most Low Powe F-M stations.  Currently, what are called Satellators are restricted to the 88 to 92 MHz band and the translator must be owned by the primary station.

But Calvary Chapel of Twin Falls and the other petitioners want the FCC to allow satellite-fed translators in the non-reserved F M 92 to 108 MHz band. The petitioners claim this proposal will have little impact on existing stations in the spectrum. This is because there is currently a freeze on new terrestrial translators in that band.

The FCC has not indicated when it might act on the Calvary Chapel of Twin Falls rules change request.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So far the only major objection has come from National Public Radio. N-P-R generally supports the Twin Falls petition, but proposes that coverage distance limitations be set for Satellator operations. More is on the web at http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi (CGC Communicator)

**

## HAM TESTING: FCC AND VEC'S TO MEET IN JULY

The 2003 National Conference of Volunteer Eximination Coordinators Conference in Gettysburg, Pennsylvania is set for July 25th. This is the annual get-together between the FCC and the Volunteer Examination Coordinators that maintain the question pools and handle all Amateur Radio testing.

Planners say that last years conference was a success and that they are looking for input for this year'a agenda. Please send any thoughts you have for this years conference to John Creel, WB3GXW. John's e-mail is WB3GXW@arrl.net (NCVEC)

**

## RESCUE RADIO COMS: THE BOSTON MARATHON NEEDS YOU

If you are planning a trip to Massachusetts later this month and will have a hand held radio with you, the ARRL Letter says that the Boston Marathon can use you.

The 107th running of the event is slated for Patriots' Day, Monday, April 21st. Planners say that they still need more Amateur Radio volunteers to assist with communications for this year's event. If you want to donate your time, please contact Paul Topolski, WSEX by e-mail to w1sex@arrl.net or Steve Schwarm, W3EVE, at w3eve@arrl.net.

Once again, that's the Boston Marathon, on Monday April 21st and its looking for hams top help out. (ARRL)

**

## ON THE AIRWAVES: THE LIBERAL RADIO NETWORK

Venture capitalists from Chicago are reportedly behind an effort to start a liberal leaning talk radio network. One that might offer an alternative to conservative talk show hosts heard across the airwaves these days.

The group will be called AnShell Media L.L.C.. Its backers are reportedly investing an initial $10 million. They are also hoping for assistance from like minded entrepreneurs.

With the intent to be on the air by this fall, the are talking with comedian and author Al Franken about working with the network. They also hope to attract other politically liberal entertainers and political guests as well. (ThePolicyPeport nerwsletter)

**

## UPCOMING EVENTS: FIELD DAY - VCARS AT THE REAGAN LIBRARY

The Ventura County Amateur Radio Society will conduct it's Field Day 2003 operations on the grounds of the Ronald Reagan Persidential Library and Museum, in Simi Valley, California. According to Peter Heins, N6ZE, this will mark the third year of Field Day operations in conjunction with and co-sponsored by the Reagan facility. (N6ZE)

**

## UPCOMING EVENTS: COMMEMORTING FRANK LLOYD WRIGHTS WESTCOTT HOUSE

The Westcott Wireless Preservation Association will be hosting special event station W8AGA on Saturday, May 3rd. The operation will taker place from Frank Lloyd Wright's Westcott house in Springfield, Ohio.

The Westcott Wireless Preservation Association serving the Westcott House Foundation by continuing radio operations at the Frank Lloyd Wright designed Westcott home. Wright designed Ohio's only prairie style house for Burton and Orpha Westcott in 1907. The house is now undergoing extensive restoration and will eventually be opened to the public as a house museum.

But in the here and now, the special event station is coming on the air. A special QSL card will be issued to any station with a confirmed QSO with W8AGA and who sends a QSL card and SASE to the Westcott Wireless Preservation Association. QSL information is on the web at www.westcotthouse.org/w8aga (Press release)

**

## CONVENTIONS AND HAMFESTS: MILWAUKEE - A SUPER SUCCESS

On the convention and hamfest circuit, word that last weekends A-E-S Superfest in Milwaukee Wisconsin is being called a super success. A late season storm made for some fairly inclement weather but it did not dampen the spirit of the regions ham community that showed up in droves to see what was new and buy what was hot.

According to industry sources the weather may have played to the advantage of dealers by driving the crowds to the display floor. And while Friday was a bit slow, Saturday more than made up for it with lots of high tickeet items moving out. We are told that averaged out sales were pretty good on both days and nobody is complaining.

The Superfesrt is held every April and is sponsored by Amateur Electronic Supply. (ARNewsline™)

**

CONVENTIONS AND HAMFESTS: RENO NEVADA IN MAY

And word that the Spring 2003 Reno Ham Swap will be held Saturday May 10th between 7:00 AM and 1:00 PM local time. The event is sponsored by the Reno Nevada Area Metro Simplex Amateur Radio Club. For Complete Details Visit the website at http://k7xc.tripod.com/hamswap/ (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

Rushey Mead is a U-K secondary school for 11 to 16 years olds. It also has an active amateur radio club. But for this special occasion, the GB2NSC station of the National Space Center was chosen for the space talk. John Heath, G7HIA operated the station. Here's more of the QSO.

## HAM RADIO IN SPACE:  PC SAT ECLIPSE POWER PROBLEMS

AMSAT says that PC Sat is still going strong, but is on ragged edge of power budget during maximum eclipses.  This is according to Bob Bruinga, WB4APR, who reports that controllers have caught the satellite on several occasions  doing a low power reset.

Bruninga adds that fortunately they have been able to restore the bird before the batteries went to negative power budget.  WB4APR recommends that since there are as many as 50 users per day, it is best if everyone turns off any unattended user stations at night when PC Sat is in eclipse.  (ANS)

## EMERGING TECHNOLOGY:  SECURITY PROBLEM WITH SENDMAIL - PSTCH AVAILABLE

According to its developer, the most widely used program for transferring e-mail between computer networks has a security flaw.  One that could allow attackers to disrupt the flow of e-mail and intercept messages.

The program involved is called  Sendmail. The security flaw does not directly affect your personal computers but it does put e-mail and information sent over the Internet at risk. Fixes for the vulnerability are available, free of charge, at Sendmail's Web site by applying a patch or upgrading to the latest version of Sendmail.

Atlanta-based Internet Security Systems Inc estimates that Sendmail handles as much as three-quarters of all Internet e-mail traffic. Sendmail Inc. which developed the program is located in Emeryville, California.  (Published news reports)

## EMERGING TECHNOLOGY:  TUBE-TYPE PC'S

It seems that a venerable old friend simply refuses to die the death of technical obsolescence.  The vacuum tube continues its reemergence into the audio marketplace, this time -- believe it or not -- in Personal Computerss.

The first tube motherboard appeared last year in response to PC gamers who craved the allegedly "more natural" sound produced by vacuum tube technology. Those who have seen the boasrds call it a strange sight to behold.

More on this May-December marriage of filament and silicon can be found at the website at http://www.neoseeker.com/Articles/Hardware/Reviews/aopenax4btube (CGC Communicator, Clayton Creekmore and neoseeker.com)

ON THE AIRWAVES: DIGITAL RADIO MONDIALE IS ON ITS WAY

After long years of gathering a consortium, prototyping and testing, Digital Radio Mondiale has announced that there will be an official launch at the World Radio Conference in Geneva, in June. Thiis according to a report in shortwave.com.

Digital Radio Mondiale, better known by its initials D-R-M is the world's only non-proprietary, digital broadcasting system for short-wave, medium-wave and long-wave with the ability to use existing frequencies and bandwidth across the globe. With near-FM quality sound, DRM hopes to revitalize the AM broadcasting bands below 30 Mhz in markets worldwide.

And right on the heels of the launch announcement came the granting of two highly significant standards for DRM. First, the International Electrotechnical Committee has given the Digital Radio Mondiale on-air system its highest stamp of approval as an International Standard. This was followed by the International Telecommunication Union granting permission for any broadcaster to use existing frequency assignments for DRM digital transmissions. This, provided that there is no interference with other stations. (ASWLC)

INTERNATIONAL -IRELAND" A WALKERS FESTIVAL

Over in Ireland, word that theTipperary Amateur Radio Group provided emergency communications support for up to 300 walkers expected to take part in the A-her-low Hillwalking Festival. The event was held the weekend of April 5th and 6th in Irland's Galty Mountainsl. (GB2RS)

**

DX

In DX, word that G3RWL, will be active as 8P6DR from Barbados through the 20th of April on 10 to 40 meters. He will also be on 80 and 6 meters if he can arrange the antennas. (GB2RS)

And VK3OT will be active as VK9XI from Christmas Island through April 21st. He will be concentrating on CW on the H-F bands and 6 metres. Priority will be given to High Frequency CW when 6 is closed. More info is on the web at http://members.datafast.net.au/electronics/path.htm

THAT FINAL ITEM: THE PARC FIELD DAY FILM LIVES AGAIN

And finally this week some very good news for ypou ham radio cinema fans. After having been among the missing for over two decaders, a famous ham radio movie has surfaced. And it will soon have its first official public screening since its restoration was completed. The guy who has the movie on his shelf -- our own Bill Pasternak, WA6ITF, has some background on this ham radio cinematic classic:

--

The film's real name is simply Field Day 1971. It is a tongue - in cheek look at the planning and execution of the ARRL Field Day operating event by what was then one of the most active radio clubs in the United States. My home radio club   The famed Pallisades Amateur Rado Club of Culver City California. Home of "good-guy the gokld plated radio" repeater.

Field Day 1971 was produced and edited by George Hively, W6GRH, -- then WA6YEA -- as a club project over thirty years ago. Hively, who has spent his life in the motion picture business wrote the script, supervised the filming, edited it together and provided the music and the narriation. And notice we said filming. Field Day 1971 was produced long before the advent of home videotape. It was shot using Super 8 millimerter motion picture film and consumer cameras. The sound track was on a separate tape cassette. In fact, it still must be projected that way -- even today.

A preview screening of the restored movie took place a March 8th at the HandiHams winter camp in Malibu California. They loved it. As a result of that enthuiastic welcome, a public showing of Field Day 1971 to the California ham radio community has been tentatively scheduled for Wednesday evening May 14th. This, hosted by the Santa Clarita Amateur Radio Club that meets just North of Los Angeles.

And for those of you who are wondering where the movie has been hiding the past 20+ years, this might surprise you. It has been kept safe and well protected by a former PARC member -- Richard Burton, the ex-WB6JAC. Richard contacted us a few months ago asking if we would like to have the movie. We said yes, and with the assistance of Anita O'Delll, N2IHX, the movie was brought back to projectable condition.

Because there is only one projectable print of Field Day 1971 available it cannot be lent out.  But W6GRH tells Amateur Radio Newsline that plans call for it to be transferred to video -- either VHS casssette or possibly DVD.  And the sound will always match the picture that way.  We hope.

With Field Day `71 -- the movie -- sitting on my desk as I record this, I'm Bill Pasternak, WA6ITF.

--

Meantime, those wanting to attend this first public screening in two decades of this riotous movie, you should consult the Santa Clarita Valley Amateur Radio Club website for meeting details.  Its on-line at www.w6jw.org.  Scroll down and click on "Monthly Meetings" for more. (ARNewsline™)

For sale:

The "Radio Crazy" is back!

Partial interest in 1 KW fulltime AM radio station in Quitman, Georgia, USA. Joint venture. Element of risk.

1490 KHz, on the air since 1955. NO real estate but might be available on a separate basis. This is the only AM in the county.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

Tel: (478)741-1710 in Macon, GA.

PLEASE! No "AM bashers" or other "negative nabobs" (I don't know what the hell a nabob is either, dude! (Or dudess!)

73,

Meyer Gottesman, W6GIV

Jensen doesn't seem to sell any appropriate hybrid transformers.  Or
at least there are not listed on their web page.

Here are examples of the type of transformer required,

I haven't had a chance to listen, yet, but my guess is that the slogan
came from someone who has worked for Disney. Either that, or it's Time
Spent Listening (TSL).

Once WNEW abandoned their 'classic rock' format the station has sucked. At one time WNEW was at the forefront of classic/alternative rock stations. It was among the last stations to feature on-air personalities heavily involved in the music production business. Bring back the likes of Scott Muni and the crew!

For sale:

Partial interest in 1 KW fulltime AM in Quitman,
Georgia, USA.

The "Radio Crazy" is back! We will accept funds only
from those that have it! Will the DISHONORABLE Meyer
Gottesman please step forward! Hi! I am not even a
small crook! We will have no money before its time!
Ha!

WSFB, 1490 killer hurts! 1 killer watt. On air since 1955. Could be scrapped by ambitious radio ham and converted to 160 meter band. Think of the DX with 150 ft. tower and 120 ground radios!

This station is too old for a BAR MITZVAH and too young for a burial! HI!

Active or inactive (i.e. lazy!) investors with at least $10,000 are welcome. If you have more, you are still welcome! All investors will be on the board with full voting rights if desired.

Listen up! NO REAL (or unreal) estate is included but for an additional $75,000 or so we can get that. The station itself is going for $75,000 asking.

Don't you dare even think about calling the station directly! The seller will take a dim view of your lack of ethics and so will I. In short, if I determine that you did the dastardly deed, I will not take your funds if you begged me! I believe in fair play. The "Radio Crazy" ain't THAT crazy! HI! The deal is already locked up!

Study yo's and old 4-400A tube transmitter under one roof. The roof does not leak but the transmitter probably leaks or sux!! Did you expect a Nautel for that price, Dude!

Don't you dare laff. Station is automated with DOS software running on a "fast" 386 PC. Well fast compared to a Commodore 64! Grin!

If you want to bring and donate your 5.0 GHZ, Pentium V CPU 2004 model Dell with Quadruple processors running Windows "Ultra 2004" that's cool! Make sure it has at least a 1000 GIG hard drive with FAT 64 file system and 1024 megs of RAM! Anything slower donated to the Goodwill on next April 1.

Tel: (478) 741-1710 in not-so-beautiful Macon, GA.

73,

Meyer Gottesman, W6GIV
Aka "The Radio Crazy"  aka "Meyer, da animal"

Theatre organs were the staple of radio broadcasting long ago, mainly from
1930 - 1955. Thank you for reposting message on anyway.

This station is too old for a BAR MITZVAH and too
young for a burial!
>>

Since man-made systems (ships, e.g.) are often given the appelation "she",
perhaps a BAT MITZVAH would be appropriate.

Hello all,

I've been thinking about starting a low powered radio station...maybe 300 watts or so. I understand the equipment that I need, and the costs (and surprisingly cheap!)..thats the easy part. But the some of the laws and engineering options confuse me. If anyone thats been through this process could shed some light or point me in the right direction that would be great!

Here are my questions:

1. What class of FCC license do I need and how much might it cost? I'm only looking to beableto broadcast 20 or 30 miles out. (I want to cover a couple towns)

2. How do you go about finding an available frequency to brodcast on?

3. Are there any affordable consultants that can help out with the legal end of thing? Fcc laws, local zoning laws, ect ect.

4. I can't put the broadcast antenna on my apartment building, I know they just wouldn't let me. So, do you have any advice as to finding a good location to place the antenna and studio? Can you have the studio and brodcast antenna in different locations? There are several very tall building in my area..if the studio could be in my aprtment and the the signal beamed over to some sort of rebroadcaster on the top of one of those buildings..that would be cool. But..I probably couldn;t afford to do this.

5. Are there any web resources that can give me a detailed guide on starting a radio station. I didn't find any good ones.

Thanks for you time guys,
Brandon

PS

Why? I'm not visually impaired and I blink several times a minute. I believe it's purpose it to keep the eyeball wet and lubricated. Try wearing contact lenses and not blinking.

Let's call it "Wet Eyeball 102.7"

Rich

That's precisely it.  Even better...try standing in front of a fan...or
even in the subway and not blinking....yeechhh....cold eyeballs don't feel
good. :-(

I wonder if fish blink...

Figure on tens of thousands of dollars in consultant fees, and possibly a
significant part of a million dollars in additional expenses.

If the proposed frequency is the least bit desirable, you'll be battling the
likes of CC, and they'll keep you in court for decades.

Is it Blink or Stink?  Sounds like a format with no direction.  Your right, this kind of crap dosen't have a chance in hell.

To call a blind person "a blink" is similar to calling someone by an ethnic slang name.

Hi Brandon

You pose a lot of questions and I will try to give you a quick summary of the major problems in front of you.

First.  I assume you are talking about a low power FM station and those won't get you the twenty to thirty miles of coverage you want. That kind of coverage would require at least 3k depending on the site and you just stepped WAY up from running a little low power station for fun into serious money investment.  If you strictly want a true low power station, think three miles coverage, not thirty.  This puts you back into the area where you can run it on your own dime.

Don't assume that you will even be able to find an open  frequency depending on your location.  It is likely you will be able to find an open LPFM channel with some searching with the help of a consulting engineering firm, which is not cheap either.  Channels may have already be allocated for your area but not yet filed for but chances are slim on that.  If you go that route, be prepared to hurry up and wait, to file all the forms and pay for all the studies required then wait until the commission decides to act.  I am not even sure the FCC is even moving on these class stations now.

You can always choose to do you own scan of the dial, find an opening, and power up your own pirate station in the proud if somewhat shady tradition of many in the past.  I don't encourage it as it is illegal and can get you fined and even jailed.  The system is not set up to encourage the individual to take to the air and even the LPFM act that was supposed to bring diversity to the dial made sure the rules were stacked against successful operations by limiting power so severely that commercial success is mostly impossible.  Even the non profits saw the futility paying for the startup and operation of a station that couldnt even cover the city limits.

As for the stack of local and state laws you may face, good luck.  if you pursue a legitimate station, be prepared to fork over money for lawyers to set up your corporation or foundation that is necessary for operations.

A better alternative, set up an internet station you can netcast on or become a volunteer at a non profit or community or university station. There is always room for more voices in the established alternative broadcast outlets and they can provide good hands on experience if you decide to seek a career in the commercial broadcasting field.

I am sure many others can give you more and better information and I hope this hasnt burst your bubble.  Just think about this.. there is a good  reason you never hear the station you always wish you could operate on the air... and dont you think if it was as easy as you hope it is.. everyone would have one?

Any new format is a calculated risk. You don't think they have not
researched this extensively?

The target is young adult females. Are you a young adult female?

Come back in 6 months and we'll see what the trends are showing. For the
moment, it is certainly different. Whether it is perceived as good by its
intended target is a matter no newsgroup post can determine.

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I just purchased XM two weeks ago. I can tell you that it will not be easy to ever go back to local (over-the-air) broadcasts. I would heartily recommend this product if you live in an area that fails to provide you with programming that is to your liking or you have an exremely varied taste in music. Of course, it is not a perfect system. I would like to see a lot more channels in each of the formats. However, I have found a few stations that have surprised me as to their high level of quality. I do have some favorites that I knew I would like; Comedy, Chrome and Fox News. Some of the surprises I found are as follows:

Luna
U-POP  XM29
Cinemagic XM23
Groove XM64
Squizz

I'd like to hear some surprises and/or disappointments others have found.

SeeYa!

I would like to create a place on my website where people can log in and
have interactive voice conversations in a particular business industry.

If you know of someone that offers this service, preferably with a zero
client footprint, I would be most grateful.

Thank you.

Mergatroide@att.net (Paul)

I am disappointed at their choice of format. The format has to be the absolute most non-human, corporate, decision I have seen in radio. It is not as bad as the one by the guy who decided to sell the legendary 92.5 KTU-FM. However, I do not in any way believe that the format will survive 2 years. To their credit: if this program has any chance of survival, it would be in New York. However, I do think it could've gained high power ratios if placed on a small Manhattan-based signal. This way, it could reach the star-struck (think E-Channel)tourist types.

I know they want to reach the potentially lucrative female demos but an AC/Rock format would have done the job. Can NEW compete with LITE? We'll see.

WNEW: 102.7 Where Rock Lives! Maybe???

Look over the "LPFM" info on the FCC site. It isn't as easy as the original plan called for several years ago! It was originally designed for the average individual, but that changed awhile back. Many hoops to jump through, but isn't that how everything is in our society?

You won't catch me listening to your favorites - yet there are other XM channels I really like.

IMO, that is the strength of XM.

With so many channels they can serve many tastes, including some very niche ones like mine - which could never be supported by ads.

I see no reason that they need 17 rock channels, only very slightly different, like FM has in many areas.  Come to think of it, XM probably does have 17 channels an old codger like me would call rock.....

Brandon, it's not possible to do it legally. You'd have to go the pirate route. Of course if you DO...you'll risk getting cought... which could result in ALL of your equipment being confiscated, possible fines into the 'thousands' of dollars and even prosecution.

Welcome to 'freedom of speach' in America...where the airwaves are for everyone......uh....as long as you can afford them.

Right now the FCC is working through the LP-100 (LP1) 100 watt applications submitted during the filing windows.  LPFM is a non-commercial service.

There were lots of applications, a large fraction of which are so defective that they don't have a chance IMO.  Many, many of the correctly-drawn applications are from religious organizations.

Eventually the FCC will get around to opening filing windows for LP-10 [LP2}, the 10-watt version of LPFM.  AFAIK, no dates have yet been set.

Anything in this sort of idea that can be done with these
coils can be done with cheap op-amps. Using these powered by a
cheap wall-wart can make it feasible for very short runs.

That would be a *bad* mistake!  The hybrid transformers are
nice, never fail, passive devices.  Op-amps are active devices
requiring multiple components, all of which raises both the
failure rate and the cost.  There is exactly one advantage to
using op-amps, and it would be an overpowering one if
multiplexing were actually necessary.  That advantage is
amplitude distortion, where the op-amps are great and the hybrid
transformers are very restricted.

Regardless, between rooms in the same building????

Buy more wire.  It is by far the better solution.

You will never get the cross talk down and keep it down with OpAmps.
Those resistors will drift too much to hold the null.

Brandon, I hate to throw cold water on your plan, but if it was that easy everyone would be running their own broadcast stations. Broadcast equipment isn't all that cheap either; it's industrial-grade stuff that's designed to keep working 24/7 without even a hiccup, despite all the abuse semi-sentient disc jockeys (like I was, 'way back then) can throw at it.

>Here are my questions:
>
>1. What class of FCC license do I need and how much might it cost? I'm
>only looking to beableto broadcast 20 or 30 miles out. (I want to
>cover a couple towns)

You need a broadcast station license for the station itself, plus operators' permits for the people who operate the transmitters.  The operators permits are the easy part -- a simple form and a few dollars are all you need (provided you meet a few minimum standards such as being a U.S. citizen or legal resident).  The broadcast station license is much more difficult to obtain; you'll start by applying for a construction permit, and you'll have to show that you've done your homework -- frequency is availble where you intend to operate the station, you can operate it without interfering with other FCC-authorized operations and equipment, and a lot more.  This part alone can cost a small fortune in well-earned fees to consulting engineers and lawyers who specialize in the Communications Act and related law.  If you actually get a construction permit, then you can begin buying and assembling the equipment you need to operate legally. Don't think that just because you want a low-power transmitter you can skimp on all the other equipment you need, or even that a low-power broadcast transmitter is all that inexpensive.  If you get this far, you'll have to document your construction and show all the measurements you make to insure that the equipment is operating within closely-defined tolerances; you may have to make (usually-expensive) modifications during construction to prevent interference if anyone -- and I do mean ANYONE -- complains that you are interfering with their TVs, stereos, pacemakers, garage-door openers, cordless telephones or anything else.  If you make it this far, you will need an (more money) expert to certify that everything is operating legally; then and only then will you receive your actual station license.

Oh, did I mention that in addition to the FCC (Federal Communications Commission) you'll have to get permission from the FAA (Federal Aviation Authority) to erect an antenna tower?  And you'll have to meet specific tower-height and obstruction-marking (tower lighting) requirements?  And, if your transmitter site is too close to an airport or along its approach path you may not be able to put up a tower there at all?

Once you're on the air (if you get this far) you'll have to make sure every person who operates the transmitter knows how to monitor its operations (that is, read the meters and either adjust or shut down the transmitter if it goes outside of legal parameters). With modern transmitters this isn't much of a problem because they usually shut themselves down before they drift out of legal tolerances. As long as you use a limiting device to prevent excessive modulation (think of it is loudness) that could interfere with stations on other channels, and you don't drift off your assigned channel, you'll probably be all right. At least until it's time to renew your station license, at which time you will have to show that you have done your best to avoid breaking any of a multitude of federal laws and FCC regulations that were designed to make sure you are operating in the best interests of the community where you are licensed. (If you get written complaints from local citizens, you must respond to them and keep both the original letters and copies of your responses in a file that is available for inspection by anyone who wants to look at it. You'll have to document compliance with OSHA, equal-opportunity laws, and all the usual legal red tape that accompanies any business. And you can't do just anything you want on your station, or someone else can come along, show you were not serving the interests of the community, and file a competing application for your license when time comes for renewal.)

>2. How do you go about finding an available frequency to brodcast on?

Money, lots and lots of it, paid to a consulting engineering firm to check the FCC database and their own maps, then do a survey of the area and see if there is an available gap in the broadcast spectrum where you want to put your station. Perhaps more money, paid to a broadcaster on the extreme fringe of your signal, to get them to agree to let you pay the costs associated with moving them to a different frequency so you won't interfere with them if-and-when you get your license and go on the air. Perhaps additional money for special antenna arrays to limit your signal strength in the direction of one or more stations.

>3. Are there any affordable consultants that can help out with the
>legal end of thing? Fcc laws, local zoning laws, ect ect.

"Affordable" is a relative term. If you're Bill Gates, just about anything is affordable. If you're an ordinary guy, you'll need to win a big lottery payout first. If you have one or two well-heeled partners, your company may be able to afford the consultants you need.

>4. I can't put the broadcast antenna on my apartment building, I know
>they just wouldn't let me. So, do you have any advice as to finding a
>good location to place the antenna and studio? Can you have the studio
>and brodcast antenna in different locations? There are several very
>tall building in my area..if the studio could be in my aprtment and
>the the signal beamed over to some sort of rebroadcaster on the top of
>one of those buildings..that would be cool. But..I probably couldn;t
>afford to do this.

Usually you'll want to find the highest natural terrain in your area, and pay whatever the landowner wants for a plot large enough to contain your entire transmitter site including the tower's "fall zone". Which reminds me -- INSURANCE! It's a bad idea to put an antenna on any piece of property you do not own outright, and you probably won't want the hassle of dealing with all the interference problems if you put the transmitter site in the middle of town.

It is possible to put the studio and transmitter in different locations, and operate the transmitter by remote control This is not cheap, since you'll need telephone and/or microwave links for both the programming you transmit and the transmitter controls, but it is how most commercial stations do things.

>5. Are there any web resources that can give me a detailed guide on
>starting a radio station. I didn't find any good ones.

For legal low-power broadcasting, I don't know of any. There probably are some that describe "pirate" (illegal) broadcasting, but I don't personally know any of those either. The best place to start looking on the Web may well be www.fcc.gov. If nothing else, the FCC site will give you some idea of how serious the federal government is about keeping people legal.

If you are looking for a hobby, let me suggest you look into Amateur Radio instead. It isn't "broadcasting" (which is one-way transmision to everyone in general and no one in particular), and you can't transmit music or other "entertainment" programming; but you can do it without breaking the bank (you can buy complete rigs at Radio Shack) or becoming an electronics genius (you'll need to know a few things, but there are some good study guides). The Technician Class license doesn't even require Morse Code any longer, and it is possible for a Technician to operate two-way communications with stations all over the world.

If it's actual broadcasting that interests you, don't try to start your own station; instead, look toward working on an existing broadcast station. Many colleges and universities, and even some high schools, have student-operated stations where you can learn the basics. Public-radio foundations in many cities operate stations that are always looking for volunteers, and sometimes they even offer paying jobs. After you have some experience -- and assuming you have real talent -- you can try for a job at a commercial broadcast station. If you're like most of us you'll make enough to live on for a few years, then move on to a "real" job. If you're stubborn like I was, you'll make a career of broadcasting (I'm retired now). If you're extremely good AND extremely fortunate, you might even land a major-market gig someday, at which time you can start saving up money to buy your own station ... which is where this discussion began, as i recall.

If you can't wait that long, go into broadcast sales; salesmen generally make a lot more money than on-air types. Seel for a good station (or keep moving up until you are at a really susccessful station), save your money until you're rish enough to buy into an existing station, and become a broadcast mogul. I know of a few former on-air people who have done this, but unless you're a top air personality on a high-rated station in a medium or large market, just saving money is hard enough -- actually getting rich in radio is much easier if you go into sales.

Is the programming commercial free, or do I have to pay US$9.99 a month and *still* listen to commercials?

This blink shit is a mix of  Z100 top 40 and WWRL urban soul.  It won't fly. Stick the research up your ass.  The young females in my immediate neighborhood love Sirius stream 66 The Beat.  A few months ago these girls (during their card games and parties) were listening to rap on Hot 97 and sometimes flipping over to 103.5 for dance.  I was surprised what a hit The Beat turned out to be.  I set  up an FM modulator to feed Sirius around my house and kids all over the block got hip and started listening and begging me not to switch to the other 60 channels. They won.  I listen to the other Sirius channels in the car but 66 the Beat (upbeat dance) is hot.  The Blink/Stink no chance in hell.  It's a total waste.

Now that I have had both services, and having noticed that a google search yields no definitive answers for people, I wanted to post my personal review of the two systems.

I have an Alpine CDA-7878 and an Alpine XM unit and a Panasonic Sirius unit, both with Terk antennas. The Alpine unit was connected to the head unit via an AiNet cable and the Sirius unit was connected with an auxiliary RCA adapter available from Alpine (KCA-121B). I had XM since it debuted and Sirius for a few months in the Pacific Northwest.

The bottom line, for those needing a quick answer, is Sirius is superior in sound quality, features(free streaming from their website!), and channel quality(better music, no commercials, better talk). XM has a few more channels that make very little difference to the end result (read on).

After careful review of both systems, Sirius came out the winnner, as I have said. The channels are laid out well, lack commercials, sound great, and are streamed on the internet. The only disadvantage of Sirius was its oft-sited lack of Nascar, which they seem to be trying to remedy. Also, XM has an extra comedy channel (it's boring, and features older, censored comedy), and a few more "experimental" music channels which most will find totally useless. Surfing XM for music is often like surfing the regular (terrestrial) radio in a large city-you get nothing but frustration. It's no wonder XM doesn't stream live on the net so that you can try before you buy. Also, XM's channel layout was unfriendly, in my opinion.

The greatest and most dizzying drawback in comparing the two, however, are the staggeringly stupid and annoying XM commercials. Not necessarily the corporate commercials that come from outside companies (which are annoying in an expected way), but the ridiculous and loud in-house XM stuff that makes you have to turn down your radio really quick when you've had it up loud-especially with the windows open (yes, they are that embarrassing). This, and the better performance of Sirius, was the deciding factor in my cancelling XM.

XM, however, holds their own and can satisfy a customer with some decent music and a fair selection of Talk. If not for Sirius, I would have kept XM, I think; probably because it IS nice to listen to the same station no matter where you go. Yet, as is the way of competition, Sirius has offered everything good that XM does and DONE IT RIGHT. Sirius outshines in the talk category, with a variety of Right and Left-wing shows, all of the useful talk channels XM has, and NPR, PRI, and a well laid-out channel plan.

XM does a bit better in the design of their customer care website. Sirius also has a customer care website, but it is not as robust (less detail). However, XM doesn't have streaming audio on its website-apparently we all have to pay XM $6.99 extra in additon to buying another $200 receiver for the house. In addition to the crappy commercials, this is probably where the corporate influence of XM being part-owned by ClearChannel and GM shows. (Clearchannel is responsible for the reason regular radio is so terrible).

So, there you have it.  I am not a shill; I was just so overwhelmed by the chasm between these two services, that I felt compelled to put a proper review on usenet.

One other interesting tidbit is that I was able to receive both services with an antenna hidden below the rear-deck of my car-made possible probably because it has a large rear-window at a steep angle.  Sound quality was the same wherever the antenna was placed-inside or outside-of course.  I understand that there was a professional review of XM vs. Sirius and that XM was said to have better sound, but the superiority of Sirius was glaring in my test.  I say A-B it at a store with XM, if you can, on the same system.  Do a channel comparison, too-I'm sure you'll see that what I've written is the case.

Good luck, and, for my two cents, I would support Sirius unless XM does an about-face.  XM may be cheaper by a few bucks, but trust me: you get what you pay for.

If you have a good question I may respond to you if you would like to send it to me.

Question from the UK. Is XM solid music or does it have DJ's? Is it
subscription financed or does it air ad's (or both)? Do they respond
to listeners requests and e-mails. Just interested.

Cheers, Rob.

The 111C was the standard transformer used on all EQ Audio circuits
for many years.
They were one of the best transformers for audio that were ever made.

Most Radio stations that have been in the same place a few years
should have a bunch of them laying around.

I know that the radio station I worked for had at least 8 of them on
the wall in the Distribuition room.

5 words is all it takes to describe XM/Sirius to me, and I'm a big fan of radio:

Should Be A Lot Better.

But I'll elaborate:

It's not horrible, but it's the same quality of radio that you get for free and they charge $10 or more for it per month. Everything I dislike about normal radio is there. Especially, for a subscription based service, there should be NO voicetracking, and NO repetitive loops of programming. There were several instances where XM was repeating itself when I had it. Either the same annoying movie-clips between songs, or anonymous voicetrack programming. Even the TV rebroadcasted programming annoys me. Shouldn't they be broadcasting radio specific news instead of playing a bunch of TV channels???

Where I grew up (in the 80's-90's even!) before Clear Channel, even the local FM stations had live DJ's at night. And they didn't charge listeners a dime.

My advice to anyone considering XM is to invest the $100-150 towards a good outdoor rooftop AM/FM antenna. You'll get a lot of stations you never knew existed, and the ones in the fringe areas might not be owned by Clear Channel (and might, therefore, be perfect!). Either way, you'll save the monthly fee.

If you must pay a monthly fee to someone, get a DirecTv dish and get yourself 30 or so Music Choice channels free with your television.

Any research based on having to go to your house would be, hmmm, suspect.

As I said, don't fly off so fast. Give te format two to three books and we
will all see what it is going to do.

Thanks for that informative review.  I have been considering both services.  For me I am left with judging that XM seems more likely to be the survivor *if* only one of the services survives, and finding that Sirius has a better choice of talk programming, especially the NPR lineup.

Actually I chose XM for the real variety of talk. I can get NPR anywhere I want, they are like cockroaches, but to get things like Smoke This, Bruce Williams, At Home with Gary Sullivan and some real variety you need to look at XM

as a retailer that sells BOTH
we have sold several hundred XM systems
and less than 10 Sirius systems since they came out!
We have KIOSK displays for both with a Kenwood Head in the Sirius display and a Pioneer head in the XM display,  both are hooked up to outside antennas and both are tied into our main soundboard... The displays are as EQUAL as we can get em, and customers can easily sample both!   But XM way way way outsells Sirius....

As a user!
I have BOTH in my tahoe...
ALthough I really like Sirius, I am 99% of the time listening on XM...!!

They both sound great!
They both have occasional drop outs for 1 second of so a couple times a month  (no biggie) depending on where I am driving.... (both acceptable to me!)

As far as commercials are concerned...
On the XM music channels I listen to, there are no commercials
On the SIRIUS music channels  I listen to there are no commercials.
(I dont listen to ALL channels so I am only relating MY views)

On the news channels I have been listening to lately (cause of the war) the commercials are about equal on both Sirius and XM...

However, on some of the other channels although SIRIUS brags about no commercials, they have commercials that SUCK BIGTIME!

A good example is, the old time radio show channel... I sometimes listen to it on my 30 minute drive to and from work...

SIRIUS has commercial breaks every 7 to 10 minutes! The commercial breaks are 4 minutes or 6 minutes long AND SUCK!  They are the same commercials everytime and you really get tired of them!

XM has a similar channel for old time radio shows and they do commercials aprox every 15 minutes of 5 minute duration!  And they are not ALL the same old crap every time....

With XM I can listen to an entire show on the way to work in the 30 minute time peroid... With Sirius there are so many commercials the whole show doesnt make it in my driving window... The commercials are SO BAD on that channel that when I see a SIRIUS "NO COMMERCIALS" banner or brochure it makes me wanna tear it up and stomp on it!!!

But, only YOU can judge and a great deal of it depends on the channels that YOU want to listen to..

They are both pretty darned great!!

Eddie Runner

James Dixon wrote:

>
> I have an Alpine CDA-7878 and an Alpine XM unit and a Panasonic Sirius unit, both with Terk antennas.  The Alpine unit was connected to the head unit via an AiNet cable and the Sirius unit was connected with an auxiliary RCA adapter available from Alpine (KCA-121B).  I had XM since it debuted and Sirius for a few months in the Pacific Northwest.
>
> The bottom line, for those needing a quick answer, is Sirius is superior in sound quality, features(free streaming from their website!), and channel quality(better music, no commercials, better talk). XM has a few more channels that make very little difference to the end result (read on).
>
> After careful review of both systems, Sirius came out the winnner, as I have said.  The channels are laid out well, lack commercials, sound great, and are streamed on the internet.  The only disadvantage of Sirius was its oft-sited lack of Nascar, which they seem to be trying to remedy.  Also, XM has an extra comedy channel (it's boring, and features older, censored comedy), and a few more "experimental" music channels which most will find totally useless.  Surfing XM for music is often like surfing the regular (terrestrial) radio in a large city-you get nothing but frustration.  It's no wonder XM doesn't stream live on the net so that you can try before you buy.  Also, XM's channel layout was unfriendly, in my opinion.
>
> The greatest and most dizzying drawback in comparing the two, however, are the staggeringly stupid and annoying XM commercials.  Not necessarily the corporate commercials that come from outside companies (which are annoying in an expected way), but the ridiculous and loud in-house XM stuff that makes you have to turn down your radio really quick when you've had it up loud-especially with the windows open (yes, they are that embarrassing). This, and the better performance of Sirius, was the deciding factor in my cancelling XM.

Internet Radio Linking Project

There are now over 2000 World-wide Ham radio Repeater and Simplex Internet Voice Gateways.

Please remind radio hams to take their handhelds with them when travelling aboard as many cities around the world now have their VHF and UHF repeaters and some VHF/UHF simplex radio channels linked to Internet Voice Gateways.

This makes it possible for hams to keep in touch with ham friends in other cities by using the local Internet Voice Gateway in the city they are visiting.

Internet Voice Gateways on repeaters or simplex channels also come in useful when there is no H.F. propagation so friends can keep in touch across the word.

Other uses might be setting up QRP contacts H.F. skeds SSTV etc I have used them to give talks to radio cubs in different countries and clubs around the U.K.

There are three separate linking systems Irlp Echolink and eQSO.

For and a list of cities and countries where the links are available and for further information please email me or visit my web site.

I'm absolutely obsessed about airchecks and memoribilia. So if anyone has old Radio and Records, FMQB, Gavin, playlists, or airchecks from AAA and Alternative/Modern/College formats from the 80s-now, please be in touch. More details will be posted or emailed, rarer the better. ANY leads or offers necessary, I'm a serious collector.

Thanks.
Bueller

Hi,

I am looking for data on FM SCA transmitting pattern and range of coverage. If a large typical FM station transmitting 50KW, one can expect SCA to be 2.5-5KW. What kind of range of coverage can I expect from such a station? Thanks for any info.

-Mikey

The Alpine unit was connected to the head unit via an AiNet cable and the Sirius unit was connected with an auxiliary RCA adapter available from Alpine (KCA-121B). I had XM since it debuted and Sirius for a few months in the Pacific Northwest.
>
> The bottom line, for those needing a quick answer, is Sirius is superior in sound quality, features(free streaming from their website!), and channel quality(better music, no commercials, better talk). XM has a few more channels that make very little difference to the end result (read on).

How can you make an honest sound quality comparison when you're using
different methods to connect each unit?

What kind of null can you get .... reliably, over the whole frequency range .... with transformers? I've a huge experience with op-amps and precision resistors and have never, ever, found resistor drift to be a problem, even in the 85dB common mode rejection range. I normally use 1000 ohm or 10K 0.1% precision chip resistors with a small (.25% range) trimpot.

I admit I've been tempted to go to transformers for my uses, which goes somewhat above audio, but in range of the specs of audio transformers, but op-amps always seemed to work fine, and I never got good numbers for the common mode rejection of the transformers over their whole frequency range.

There's one remedy I haven't heard from anyone, and it's one that I've used as a consumer, that I'm aware of since I work in a telecomm-related industry.

Rich Wood has submitted a suggestion that I'm about to post that in this type of situation, you let everyone know how the telco is screwing up. It's an excellent suggestion.

Once the immediate problem is solved, go after them! File a complaint with your state's PUC/PSC. Telcos are a regulated utility. Data services may or may not be regulated depending on what you have... the ISP side of the telco typically isn't... but your friendly local phone company must at least file tarriffs on T-1, DSL and ISDN circuits.

Can't speak for other states, but I've successfully used the Ohio PUC to force the hand of both SBC Ameritech (who currently provides local service to my home) and XO (who used to service a couple business phone lines of mine) to Do The Right Thing.

```

I would like to know what the offensive lyrics are before I join in any boycott of any group.  However I think the music industry is busy killing itself so I am not too worried.

I mean if they sell offensive music and only a small percentage of people, those to stupid and actual criminals buy it, then what about the rest of the people?  I also doubt they'll be reselling this crap in 20 years to the same people because I don't think jailed inmates have a lot of disposable income.  But even if they do....so what, how many people is that?

The music industry has lost it's mind selling this crap.  Look at the Beatles, they sold music that made people feel good.  Gee...duh...they forgot that already?  AND the biggest joke is they can't even figure out how to make money anymore because they can't deal with the Internet or new technology.  They are like retarded dinosaurs sticking their heads in the sand.

Rich Wood <richbwood@earthlink.net> writes:

>We called to top honcho and repeatedly mentioned on the air what the
>cause of the problem was. It got fixed and we were able to get them to
>contribute $50,000 to the charity. They don't like it when we mention
>how badly they're screwing up on the air.

I'll suggest that to my colleagues, but I have a feeling they will have some reservations. The telco is an advertiser on our flagship station, which is in a large market and gets pretty reliable telco service. The stations getting screwed are in a much smaller market[1] and I doubt there is any telco person there of sufficient rank or authority to respond to an on-air complaint (or even in our large market; there used to be an autonomous "division" of the telco serving our state and four or five others under a president who was a listener to our flagship station, but that was two telcos ago; now everything is run from a head office in a state well beyond the reach of any of our stations).

The first thing I'm going to do, I think, is put a ten-foot mast under our STL antenna and see if anyone from the town or county objects.

[1] I could go on at length about what I perceive to be a culture of mediocrity permeating that particular market, but perhaps that is a tale for another time.

About twenty years ago in Tampa, we had a 'disgruntled ex-employee" come out the studio in Pinellas Park and use and axe on the phone lines that linked the studios to the tower site about six miles away. And every other line in the bundle for that matter. Luckily, she did it on a Sunday morning, probably after a very late night in a bar coming up with this brilliant plan of retribution. Since it was Sunday morning, we didnt lose much in the way of business and the telco guys were quick to come help us get back on the air.. but that was when Ma Bell owned it all. Sure made things simpler.

In article <b65u6i$cd9$1@xuxa.iecc.com>, Rich Wood wrote:
> nervous. At WOR we had a huge phone cable cut by construction workers

I remember back in 1995 (or was it 1996), you guys did a "talk concert" (my term for it) in Bryant Park - did the whole broadcast day from the park behind the main library.

During Grant's show, the damned feed back to the studio went down for ..... almost 15 minutes (or at least it seemed that long).  I was sitting in the front row and had a radio with my earplug.

Apparently WOR was using a phone line back to the studio?

What was most embarrasing was that the board op had no backup music or spots or anything cued up in case of an emergency.  There was dead air going out.....

P.S.: I stopped by the WOR building a couple of weekends ago, the big metal sign strip that said WOR 710 WOR 710 WOR 710 WOR 710 across it's full length over the entrance facing Broadway was gone. What gave? :-(

That was a day I'd rather forget. The feed went down several times.
The ISDN line simply wasn't reliable.

>What was most embarrasing was that the board op had no backup music or
>spots or anything cued up in case of an emergency.  There was dead air

I had a heart to heart chat with that board op., as did a number of
people in the engineering department. In the case of a network show
there was always supposed to be a hot backup running. We even had
copies of network shows stored at ABC's Technical Operations Center.
That's where the network originated the day the phone lines were cut.
ABC was wonderfully helpful.

I don't remember any such sign. It must have been taken down before I
got there. All I remember was one set of call letters and a place
where "Mutual" used to be. It hadn't been painted over very well and
you could see where the letters used to be.

Lorenzo Milam's book should be adapted for LPFM and similar operations. It would be a darned sight better than any of the broadcasting texts I have seen in college book stores of late.

For sale:

(The "Radio Crazy" is back!)

Partial interest in fulltime 1 KW AM radio station in

Quitman, Georgia. Near Valdosta. On the air since
1955. 1490 KHz. Class "C" (Formerly called class IV).

This is the only AM in the county.

City of about 4700 in a county of about 16,500.

Joint venture. Active or inactive investors with at
least $10,000 each are welcome.

NO repeat NO real estate is included. It is leased for
$400.00 per month. Studios and transmitter are under
one roof in a very pretty residential setting.

I am NOT a broker, agent, shill, owner or part owner
with respect to this station.

Tel. (478) 741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

Does anyone know what the stations in Sacramento bill each year?

Anyone know what KYMX - Mix 96 bills $ ?

Anyone care to guess?

Thanks!

Me

>KZQX is the 44 watt LPFM, isn't it?
>

Yes, actually, the FCC recently issued a new CP for 74 watts. That does make the station receivable (in varying degrees) in most of Longview, assuming you have a good radio. Most car radios are OK with it, but it is cretainly not a strong signal.

The local Radio Shack reports selling "more than average" numbers of outdoor FM antennas recently.  I can't tell you if the station has anything to do with that or not.

The last time his name came up I called his office to see how he was
doing. He'll be back in April from Mexico. He might be interested,
though, lately, he's been writing on issues of the handicapped. Please
don't get on me for not being PC. Lorenzo refers to them as "crips."
Since he's a polio survivor he has that right.

Sorry, can't help with the schematic but can tell you about McKay Dymek. I am a a boyhood friend of George McKay (W6WXG) who developed the AM-5 tuner with his Chief Engineer, Paul Metsker. I helped put out a promotional newspaper called the Dymek News in those days, and have a list of more than 80 stations using this tuner, including WGAR, Cleveland, in 1976.

Among his other products were the DR22/33 series general coverage AM/LSB/USB digital communications receivers that covered 50 kHz to 29.7 mHz.  Some of these are available on the used market but are considered very rare.  He sold many of the rack mounted version to the South Korean Navy. All Dymek products were made in Southern California, USA!

Unfortunately George has retired from the business and the name has been sold to a company in Oregon.

For sale:

Partial interest in AM radio station in Quitman, GA.

WSFB, 1490 KHz, fulltime, 1 KW. On the air since 1955. This is the only AM in the county.

Joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual may own more than 49 percent. We want investors, not bullies! This rule applies to me too!

Asking price is $75,000 and owner will seller finance with $25,000 down.

NO repeat NO real estate is included. You heard it first here, kiddies! That is rented at $400.00 per month. Studios and transmitter under one roof.

Tel: (478)741-1710 in Macon, GA.

I am NOT an agent, broker, shill, owner or part owner of this station.

I am a semi-retired broadcast engineer. Resume emailed or snail mailed on request.

Please, no "AM bashers" or other "negative nabobs" (I don't know what the hell a "nabob" is either!)

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

I don't know about low-cost, but here are some companies off the top of my head:

http://www.alice.co.uk/
http://www.bbcresources.com/

You could do worse than ask on the engineering forum of http://www.mediauk.com/ - a lot more UK media-y-y-y-y types hang around on there than they do on Usenet.

The Radio Authority sent us a list of equipment suppliers when we applied for our last RSL -- sadly, the documentation is all 90 miles away from me at the moment.

> We're doing a 10 day RSL from the centre of Huddersfield in

Good luck with it -- I'll try and have a listen from down in Leeds.

> Had a quote from a company called Radica, but they want 2000
> quid for something that's currently in America, and sounds too
> posh for Madonna, nevermind us lot. :o)

That's because Radica are generally expensive, but they're generally very clued up.  Our main FM broadcast transmitter is a Radica, and it's superb.

Hello

I wonder if anyone knows SL Huntley, who was a radio writer and journalist in Chicago. He was to the writer of popular comic strip Mescal Ike from twenties to forties; Art Huhta was the artist.

I�d like to know which were his first names and some biographical info about his life and work.

Best regards, Ilpo Lagerstedt, Finland

I use my computer and Media Player to listen to AM and FM broadcast.

I have a favorite DJ that I can no longer find.  I am sure he is still
active.

His name is Hubcap Carter.  Does anyone know what Media Player
broadcast stations are featuring Hubcap?

Thank you.........       Lee Carkenord

I certainly support his right to do his job - and use this newsgroup to do it.

I don't know if it's diversity - or just that the radio biz is screwed up.

This is the same newsgroup where Opie and Anthony had their defenders and advocates; on the other hand, people jump all over Meyer for trying to broker a deal here or there.

Go figure.

Hubcap is on KAAM 770, in Dallas on Saturday nights. He syndicates his show as well, but I don't know who picks it up.  I don't think it is streamed at this time.

Chuck

I am looking for some audio tapes cassette  tapes of a radio station
that was on the air in the early to mid 70s,  in houston texas,, the
station logo was .  .....ALL MUSIC ALL THE TIME,,,,,
almost all the music was instrumental with a couple with vocals, some of
the music selections i remember where,
Colours,,,,,,,, that was a vocal,,
Chasing Rainbows,,,,,,,,instr,
Memorys are made of This,, instr.
Eye Level,,,,,,, instr,,
I Love Paris,,,,instr,,,
Song Sung Blue,,,,, instr,,,
Tennesse waltz,,,,  inst, with vocals,,
Here Comes The Sun,,,,,,,instr, ==========================
This station was a easy listening music station and it was called KYND
FM 92 Pasadena ,Houston,,Tx,,,,,,,
they said that there music was recorded in england,,,,,  I know that
this format was also used in pennsylvania it was the same exact sound
track when i visited there in 76,,the songs even played in the same
order so it must have been a big reel to reel tape they had,unless it
was a satellite feed from somewhere,,  if any one just happened to tape
record this station in the 70s, and wouldnt mind makeing me a copy,will
pay you for your tape and mailing costs,,, please write me or post
here,,, thanks for all your help ,,
best regards,, Ricky

Approach a Dymek AM5, yeah! A crystal set connected to
a 5/8 wave tower!! HI!

I owned a Dymek AM5 circa 1976 and you could not tell
AM from FM mono!!! The combination of high
sensitivity, dual selectivity and low detector
distortion make it the 75A-4 of AM tuners! I am sorry
I sold it to this day!

I should know good tuners, my last job in radio was
Chief Engineer for a 5 KW fulltime AM in NYC. HI!

73,

Meyer Gottesman, W6GIV
Macon, GA

Amateur Radio Newsline™ Report 1338   April 4, 2003

Amateur Radio Newsline report number 1338 with a release date of Friday, April 4th, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  A day to honor ham radio operators world-wide and a ham satellite on hold.  These stories are first on Amateur Radio Newsline report number 1338 coming your way right now.

(Billboard Cart Here)

**

RADIO HONORS:  WORLD AMATEUR RADIO DAY

Amateur Radio Supporting Education' is theme for World Amateur Radio Day.  Its coming up real soon.  RSGB newsreader Jeramy Boot, G4NJH, is here with the details:

--

The theme of this year's IARU World Amateur Radio Day is to be 'Amateur Radio supporting technology education in the classroom'.

World Amateur Radio Day is marked on the 18th of April each year to commemorate the anniversary of the founding of the International Amateur Radio Union on that date in 1925.

Ole Garpestad, LA2RR, the Chairman of IARU Region 1 writes: "There is no doubt that the future of amateur radio belongs to those that are now in the classroom. In keeping with this theme, I would like to encourage every society in the Region to let our young people know that amateur radio is a unique hobby - simultaneously sport, scientific study, personal pleasure and collective activity. And that radio amateurs today are voluntary and selfless researchers in the technological field of amateur radio, an important resource to every country, and something to be proud of."

"But the 18th of April is not only a day to think about our future, it is our day, a day for celebration. All of us, societies and individuals, can celebrate in our various ways - organizing presentations, club meetings, parties, honoring senior radio amateurs who go back to the early years of IARU, or just putting our equipment on the air and making just a single QSO on this day, so realizing how large our ham community is."

Jeramy Boot, G4NJH

--

Again, the date for this years World Amateur Radio Day is Friday, April 18th. (GB2RS)

**

## HAM RADIO IN SPACE: PROJECT EAGLE ON HOLD

Plans to launch one of two new ham radio satellites have been put on hold. The reason for the setback can be traced to one word: Funding.

The bird in question is named Project Eagle. It, along with the Project Echo ham-sat is one of two birds that AMSAT had previously announced for development.

According to AMSAT North America President Robin Haighton, VE3FRH, the current levels of contributions to the amateur satellite organization are not enough to pay for building and launching both future satellites. One of two projects has to be put on hold and furloughing Eagle has been the decision.

Up until now AMSAT North America had been working on both new satellites simultaneously. While ECHO is still on schedule for possible launch later this year, the launch of Eagle has been delayed indefinitely. (AMSAT)

**

## HAM RADIO IN SPACE: TWO-HAM CREW HEADED TO THE ISS

Just as ARISS Chaiman Frank Bauer, KA3HDO, predicted a few weeks ago, two ham radio operators will be replacing the current three man crew on board the International Space Station. A NASA announcement identifies the latest space adventures as U-S astronaut Ed Lu and Russian cosmonaut Yuri Malenchenko.

Lu holds the call sign KC5WKJ while Malenchenko is RK3DUP. They will comprise the Expedition 7 crew, replacing Expedition 6 astronauts and Ken Bowersox, KD5JBP, Don Pettit, KD5MDT, and Russian cosmonaut Nikolai Budarin.

NASA and its partners decided on manning the ISS with two space explorers instead of three as an interim measure until the U-S space shuttles are flying again. A two man crew conserves on the amount of vital supplies needed for on-orbit life.

Three person crews will resume when the Columbia disaster investigation is concluded and the space shuttles take to the sky again. The three remaining Shuttles in NASA's fleet Endeavour, Atlantis, and Discovery have been grounded until the cause of the Columbia accident can be determined and safety changes implemented.

NASA's Return to Flight team has been told to complete their initial tasks in time to support the earliest possible launch date, which would be this fall. But officials of the space agency say that it could take months longer to prepare the shuttles to fly again. (From published news reports)

HAM RADIO AT WAR: DOING BATTLE WITHIN

Ham radio is supposed to transcend international politics, but you would never know this by the on-air antics of one unnamed Ukrainian radio amateur and a few stateside hams.

Lets start with a post on the QCWA remailer by Bob Harvey, K2PI. Harvey says that he heard the Ukrainian operating a contest on March 30th. Thats not news in itself except that the Ukrainian was refusing to work United States or U-K amateurs because of the war in Iraq.

Harvey writes that the Ukrainian said to call him only if you supported his view that the United States was conducting an illegal and evil war. Needless to he had no QSO's with any American or British hams.

But theres another side to it. John Sielke, W2AGN comments over the same QCWA remailer on the plight of a French ham friend of his. W2AGN says that the guy was harassed off of another ham radio remailer only because he was French and the other hams did not agree with France's anti-war stand. Sielke says that the unidentified French ham was truly vilified even though he had made no comments concerning Iraq or politics. He was just attacked purely because he was French. (QCWA Reflector)

**

RADIO RULES: FCC CONSIDERS INTERFERENCE IMMUNITY FOR RECIEVERS

We predicted a month ago that it would happen. Now comes word that the FCC has issued a Notice of Inquiry, seeking comments on possibly requiring receiver manufacturers to build in a certain level of interference immunity. Bill Pasternak, WA6ITF, has more:

--

As noted on the CQ Magazine website and elsewhere in cyberspace, amateurs have been frustrated for years by trying to explain to neighbors that interference problems were really the result of poor design.  Bad engineering  in their TVs, stereos, cordless phones and other receivers.

Now, because of the need to protect Digital Television transmissions, the FCC is seeking comments on the current immunity performance and interference tolerance of existing receivers.  Its also looking at the possibilities for improving receiver immunity in the not to distant future.

The FCC says that it is soliciting input from the public on possible approaches to achieving desired levels of receiver immunity.  This runs the gammit from better product warning labels to the possibility of implementing mandatory standards governing the manufacture, import and sale of consumer electronics reception gear.

It is all in FCC E-T Docket 03-65.  You will find it on the web by using the document search engine at www.fcc.gov.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Again the inquirtey into interference immunity standards can be found in FCC E-T Docket 03-65.  (CQ Website, FCC)

**

FCC:  VANITY FEES MAY BE GOING UP

If you are planning to go for a vanity call sign, do it now or be prepared to pay a few cents more.  The proposed hike to $16.30 for a vanity call comes in an FCC Notice of Proposed Rule Making dealing with fee collection matters released on March 26th.  Its all in M-D Docket No. 03-83 and comments on it are due no later than April 25th.  (From FCC release)

**

ENFORCEMENT: FCC - YOU SOLVE THE PROBLEM

The FCC has told the operators of two competing repeaters that its not going to solve the dispute between them.  The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth:  "The Enforcement Bureau has written to Grearal Gogue of Conway Arkansas, David Stone of Morrelton, Arkansas and Tom Lee of

Jerusalem, Arkansas, regarding repeaters AC5RU and KD5CYA. In the letter it was stated after reviewing the submissions of all relevant information, we declined to intervene in this dispute. It is our position, that in this case, both parties are responsible for solving the interference and we urged them to so in the best interests of Amateur Radio."

--

In this case, two repeaters sharing the same frequency claim mutual interference. On May 24, 2000, the FCC opened an inquiry about allegations that Lee's AC5RU system was causing harmful interference to coordinated repeater KD5CYA, licensed to Gerald Hogue. The allegations stated that Lee's repeater was uncoordinated because the coordination had been forfeited by numerous changes in location.

On August 14, 2000, the FCC notified Lee that it was his responsibility to prevent interference to KD5CYA inasmuch as it appeared to be the coordinated repeater. On September 14, 2000, after reviewing Lee's lengthy response, the FCC rescinded its requirement that Lee solve the interference to the KD5CYA repeater. This is because it was unclear to the FCC as to which repeater was properly coordinated. The Commission said that it was not an appropriate matter for enforcement action. It also urged the parties to take advantage of the mediation and dispute resolution program of the ARRL but one declined.

Lee submitted additional information on January 5, 2001. On February 8, 2001, after receiving additional documents from all parties, the FCC stated that although it failed to see why mediation or arbitration would not be a viable option, we nevertheless agreed to review the matter once again. In response to allegations of deliberate interference, we cautioned everyone involved to cooperate in the resolution of this matter.

Now, almost two years later the FCC has again said its not going to act. It says that after reviewing the submissions and all relevant information, that it will not intervene in this dispute. The agency says that in this case, both parties are responsible for solving the interference and it urges them to do so in the best interests of Amateur Radio. (FCC, RAIN)

**

AT THE FCC: MULETA NEW WTB CHIEF

John Muleta is the new Chief of the FCC's Wireless Telecommunications Bureau, which regulates amateur radio along with other two-way radio services. According to the ARRL, Muleta worked for the FCC from 1994 to 1998 and his positions included Chief of the Enforcement Division. He has also worked in the private sector since 1998. Muleta succeeds Thomas Sugrue, who headed the bureau the last four years. (ARRL)

**

## RADIO LAW:  CONGRESS APPROVES DIFFERENT AMBER ALERT MEASURES

The United States House of Representatives has approved creation of a nationwide Amber Alert network.  The action came on Thursday, March 27th after politicians on both sides of the aisle attached several additional child protection measures to the bill.

The bill, approved by a 410 to 14 vote, now goes to the Senate, which earlier approved legislation authorizing only the nationwide child kidnapping alert network.  President Bush has commended the House on acting on legislation to help expand an Amber Alert system across the nation.  He says that he looks forward to signing a reconciled version of the bill.  (Published news reports)

**

## RESCUE RADIO: UK POLICE ASK HAMS TO HELP SOLVE ROAD MURDER

Police in Surrey are asking U-K hams and C-B operators to help solve a case of murder by road-rage.  Just after midnight UTC, on Friday the 21st of March, a truck driver on the M3 motorway was driving northbound when someone threw an object at the cab of his vehicle.  It smashed the windshield and hit the driver and fatally injuring him.  He was able to bring the truck to a safe halt before loosing conciousness.  He died at the scene.

Investigators belive that the object was thrown from a footbridge over the highway.  They are asking any ham or C-B operator who was driving in the area that night to call in and let them know if they saw anything. Surrey Police say that any leads would be appreciated.   (GB2RS)

**

## RESCUE RADIO:  HAMS HELP SAVE YOUNG BURN VICTIM IN HONDURAS

The ARRL Letter says that quick action on the part of a group of ham radio operators may have saved the life of an young burn victim in Honduras.  The 8 year old girl was seriously burned late last month. Amateur Radio operators and volunteers at the International Health Service clinic in a remote village in southeastern Honduras and stateside hams worked together on the air to bring needed treatment to the child.  With ham radio to coordinate the move, the youngster was evacuated by air to the nearest town with a hospital.  From there she was taken to the capital city of Tegucigalpa, where the University of Honduras Medical Center has a burn trauma unit.  (ARRL)

**

## WELCOMING THE YOUNG:  W9SM AT THE WAUSAU CHILDRENS FESTIVAL

The Wisconsin Valley Radio Association will be sponsoring a special event station W9SM,  at the 30th Annual Children's Festival in Wausau, Wisconsin.

The date is Saturday April 5th.  The Children's Festival features hands-on activities at numerous booths run by various community groups.

The special event station will operate between 1600 UTC and 2200 UTC on April 5th.  This, in the General portions of the 10, 15, 20 or 40 meter bands both SSB and CW.

While in operation the station will demonstrate several aspects of amateur radio to the children attending, including APRS and High Frequecy operations.  The kids who stop by will also have the opportunity to get on the air.

The Festival is sponsored by the Children's Festival Committee and the Wausau and Marathon County Parks and the Recreation and Forestry Department.  QSL via WB2TLQ at his callbook address.  (WB2TLQ)

**

CONVENTIONS AND HAMFESTS:  NAB HAM RADIO RECEPTION - APRIL 9

On the convention scene, the annual Amateur Radio Reception at the National Association of Broadcasters Convention is slated for 6 to 8 p.m. on Wednesday April 9th.  The venue is the Hilton Hotel in Las Vegas Nevada, right next door to the famed Las Vegas Convention Center.

This years hosts are again CQ Magazine and Kenwood Communications. Publisher Dick Ross, K2MGA and Editor Rich Moseson, W2VU will be there representing CQ.  Paul Middleton, K4NUH, will be on hand for Kenwood.

Between 800 to 1000 hams in the broadcast industry attend this yearly ham radio social get together.  Among them will be top ARRL officials and some of the folks from Amateur Radio Newsline.

The National Association of Broadcasters Convention is one of the largest held each year in Las Vegas.  It typically draws over 100,000 attendees. More information is on the web at www.nab.org/conventions/nab2003  (ARNewsline™)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

## HAMFESTS AND CONVENTIONS:  GO SEE THE TV COMMERCIAL

Ever see a television commercial for a ham radio convention?  Well the Rochester Hamfest has one and its now on-line so that you can see and hear it.

The commercial comes courtesy of the Rochester Hamfest.  That show is slated for May 30th through June 1st at the Monroe County Fairgrounds in Rocheter New York.

To view or download the T-V spot go to www.rochesterhamfest.org.  Then scroll down to the words "click here to see our new TV commerrcial."

And oh yes.  A high speed connection is recommended.  This is because it is a 5.9 Mega Byte file that opens in most recent media players including Apple Quicktime and Real Player One.  (Rochester Hamfest)

**

## HAM RADIO IN SPACE:  THE 2003 AMSAT-UK SPACE COLLOQUIUM

And the 18th AMSAT U-K Space Colloquium will be held from July 25th to the 27th at Surrey University, Guildford in Surrey England.  This year speakers are a bit hard to find.  So planners have relaxed the requirement for a printed paper to accompany the talk.  AMSAT says that in 2003 this will not be mandatory.

Other changes this year include "Beginners' Sessions" on both Friday and Saturday afternoons and an earlier start of talks.  These will begin right after lunch on Friday but alternate planned tours will be available all day.

Full information about the 2003 Colloquium is on the AMSAT-UK web site. You will find it in cyberspace at www.uk.amsat.org/colloquium.htm. (AMSAT-UK)

**

## INTERNATIONAL - UK:  CB RULES AND FREQUUENCIES TO CHANGE

On the international freont, look for some major changes to happen to 11 meter Citizens Radio in the United Kingdom over the next several years. This, as the result of the British equivlant of our Notice of Inquirey being issued by their Radiocommunications Agency on March 25th.

The Consultation Document -- as it is known -- contains a proposal to deregulate Citizens' Band radio in the United Kingdom and withdraw the 40 U-K only CB channels by 2010.  It also proposes removing the need for individual licensing in 2004.

Not changed would be the current technical equipment requirements and the current operating rules. The deleted U-K only channels would be replaced by the 40 pan-European C-B channels. A press release from the U-K Radiocommunications Agency says that this deregulatory move is intended to provide easier access to C-B and to enhance enjoyment of the hobby. (GB2RS)

**

## INTERNATIONAL - INDONESIA: WORLD-WIDE CB DIRECTORY

The Indonesian DX Club is inviting Citizen's Band operators around the world to register their callsigns for the IDXC's C-B Radio Callsign Directory. IDXC is the only one DX listeners club located in Indonesia, and regularly listed in the World Radio TV Handbook. To learn more about the club and register take your web browser www.idxc.org/callsign and explore a rather interesting spot in cyberspace. (IDXC)

**

## AWARDS: GET YOUR SWL CERTIFICATE

Duane Fischer, W8DBF, says that the beautiful Hallicrafters Ccollectors International Short-Wave Achievement Certificate is still available. You get it for verified reception of 25, 50, 75, 100 or more countries. Proof of reception is not required as the award runs on the honor system. You can see a low resolution copy and get more information on line at the Hallicrafters Ccollectors International website. Irts in cyberspace at www.w9wze.org (W8DBF)

**

## DX

In DX, word from KA2AEV that a group from the recently formed Antigua & Barbuda Radio Club will be traveling to their sister island of Barbuda April 18th to the 21st. Plans call for stations on 160 through 10 mters plus a 2 meter station for local contacts using the call sign V21BBQ. Organizers say that to their knowledge, there has never been any ham activity from Barbuda. In addition to racking up contacts the operators hope to expose the islands residents to the magic of the hobby while familiarizing the worlds ham community with Barbuda. QSL to the Antigua & Barbuda Radio Club, P.O. Box 965, St.John's, Antigua, West Indies. (KA2AEV)

Also, PS7AHR is the official station of The Brazilian Amateur Radio Historical Archive . According to Ronaldo Reis, PS7AB, this is an organization devoted to documenting and preserving the history of amateur radio in Brazil. If you happen to contact it, please QSL via the bureau or direct to P.O. Box 2021, Natal/RN, 59094-970, Brazil. More information, in Spanish and English, can be found on the web at www.ps7ab.com.br (PS7AB)

**

THAT FINAL "APRIL 1ST" ITEM:  RADIO THAT CAN MAKE YOU SICK

And finally this week, it appears that some hams may be facing a new health threat ... especially if they eat while operating the radio. Roving correspondent Pierre Pullinmyleg is back from his self imposed exile and filed this report on Tuesday, April 1st:

--

For decades, wives of radio amateurs have said that ham radio makes them sick to their stomachs. Now, it seems that ham radio may actually DO that.

The French Office of Oohs and Lalas, or FOOL, has been studying reports of amateurs falling ill after eating while operating during certain band openings on 6 and 10 meters. Officials at FOOL have determined that the problem occurs only during periods of sporadic-E propagation and believe that the radio waves carry with them into the shack of ham some of the ionization from the E-layer of the ionosphere.

If food is present at the amateur's operating position, then the ions apparently interact with bacteria present in the food to cause food poisoning. The scientists have determined that this is a type of E-Coli contamination which they have named Sporadic-E-Coli, both because it occurs only sporadically and because it appears to be caused by sporadic-E radio signals. They recommend using audio filtration in order to "cleanse" the signals before they reach the speaker, which appears to be the major medium of transmission.

Reporting from the E-layer, this is Pierre Pullinmyleg for Newsline.

--

Pierre says that another option, of course, is to eat in the shack only during periods of F-layer propagation -- and then -- to only munch on chocolate F2 layer cake.  (A Pierre Pullinmyleg Annual April 1st Exclusive Report)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.  You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Don't forget that the nominating period for the 2003 Amateur Radio Newsline Young Ham of the Year Award is now open.  You will find all the rules and a fill-in-the blank nominating form in cyberspace at www.yhoty.org

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

NEW ANTENNA FOR SALE---THE SUPER JPOLE!---EMAIL US FOR SOME PICTURES!
Superskyhooks is pleased to announce the sale of one of our kick-ass SUPER JPOLE antennas to a Northeastern Ohio FM Broadcast pirate! This antenna replaces his tired and dying 1/2 wave dipole with a 14 foot tall, 6dB gain monster! Delivery of this antenna marks a milestone for

Superskyhooks, we have now sold our first FM BCB antenna! After selling oodles of amateur radio antennas over the years we are just flat tickled pink to be working with the Jolly Roger type folks!

The Super Jpole is a 6dB gain, ALL ALUMINUM antenna that totally outperforms a 5/8 wave costing much more. Don't get ripped off by inferior, PVC pipe designs at inflated prices.

Superskyhooks is producing this antenna for the FM Broadcast band, made to your frequency specification, for $92.00 plus shipping to the lower 48 US states.

EMAIL Superskyhooks@juno.com for more information!

Do not get ripped by the big commercial companies. We can make you a damn nice antenna, or an array of them, for way less dough. Our stuff is not some junk thrown together. It is professional looking and works super. Amateurs by the score have bought antennas from us, and now my fellow ham and pirate DocWu has persuaded us that the market might be good. An example of our deals: 5/8 wave pre tuned to your frequency and checked with an MFJ 269 analyzer: $50.00 plus ACTUAL ship costs. 1/2 wavelength Jpole pre tuned to your frequency and checked with an MFJ 269 analyzer: $40.00 plus ACTUAL ship costs. 1/2 wavelength dipole, pre tuned to your frequency and checked with an MFJ 269 analyzer: $28.00 plus ACTUAL ship costs.  These are METAL antennas, not some pvc and wire stuff. All come with a complete and detailed instruction manual that spoon feeds ya through the assembly process. Most antennas assemble in 15 minutes or less!

Email with your requests to superskyhooks@juno.com
Pictures available soon on a web page under construction. REMEMBER, prices are way too damned high not to take advantage of this deal.

We also will build an antenna to your specifications for just about any VHF or UHF frequency for less money than anyone else. The competition knows us, you should as well!
An email gets pics of some of the stuff we have done in jpg format.
Superskyhooks accepts paypal, money orders, or checks.

Unfortunately, Hubcap doesn't have too many stations broadcasting his show.
As of last summer WPTR, 1540 AM, Albany, NY carried it on Saturday nights.
WPTR is clear channel north and east of Albany.

ATM:
BTW, isn't it amazing the way so many American radio and TV
stations are adopting the propaganda lies of the Bushies?

Operation Iraqi Freedom -- should be -- "Iraqi Conquest";
coalition forces -- should be -- "American forces";
enemy casualties -- should be -- "victim casualties";
embedded reporters -- "invasion ride-alongs";

and so on ad nauseam.

Hi folks,

Does anyone have any technical info on digital radio in the UK via satellite, cable and Freeview? I'm particularly interested to find out about sound quality issues, not least coding system used and bitrate - are these generally the same as on DAB? Any subjective feedback on the use and sound of these media?

Many TIA,

Rich

Posted at the 95 WKAZ FOREVER radio tribute website http://www.95wkaz.com

Lovell McKinley Webb, 60, of Charleston West Virginia, formerly of Gordon, departed this life April 7, 2003, after a long and brave fight with cancer.

He was the son of Maycel Webb and the late Bobbie Webb of Gordon.

Lovell graduated from Van High School in 1961 and attended the Elkins Institute of Technology, Chicago, graduating as a first class engineer. He worked as a radio announcer for AM 950 - WKAZ Radio, Charleston, for 17 years. Lovell was a Ham Radio operator (N8KAZ) since he was a teenager, serving as president of the Kanawha Amateur Radio Club for two terms. Lovell had a love for radio and had made many great friends whom he dearly loved.

Lovell leaves behind to cherish his memory his wife, Jacquelin Rickman Webb, formerly of Dorothy; and their family of pets, which were his close companions and which he called "The Zoo;" brothers and sisters-in-law, Daniel R. and Judy Webb of Gordon, Jackson and Brenda Webb of Wharton, Johnson and Brenda Webb of Ypsilanti, Mich.; sisters and brothers-in-law, Judith and Earl Gunnoe and Nona and David Wilcox, all of Gordon; brother- and sister-in-law, Don and Nita Perry of Campbells Creek; sister-in-law, Peggy Rickman of Katy, Texas; brothers-in-law, Dink Rickman of Speonk, N.Y., Buck Rickman of Toledo, Ohio; several nieces and nephews; and a host of friends.

Service will be 11 a.m. Thursday, April 10, at Handley Funeral Home, Danville, West Virginia with the Rev. Philip Rowe officiating. Interment will be in Memory Gardens, Madison, although the most important burial was on the 28th day of September 1953, in obedience to the command and in imitation of the example of our Lord Jesus Christ, Lovell McKinley Webb was buried with Him in baptism at Van by his grandfather, the Rev. Marvin Lovell Kuhn.

Friends may call from 6 to 9 p.m. Wednesday at the funeral home.

---

Greetings,

This organ may soon be taken to the dump.

A 4/14 Kilgen (one of only three of its type built by Kilgen) built for, and once installed in the studio of WFIL in Philadelphia in 1937. Owner is late on storage payments.
It appears tp be complete in two storage lockers in Loveland, OH.

The off-again, on-again owner had wanted $10,000. Self Storage people MIGHT sell it for the delinquent amount due on the storage unit; it would not hurt to ask.

Interested?
Quickly contact Kevin Collopy at 10686 Loveland Madiera Rd. Loveland, OH 45140

Musically,

Stan Krider

I'm doing research on radio's influence on the development of popular music over the last 50+ years, and I'd like to find out more about the first rap station, KDAY-AM. Does anyone know of someone who would be a good person to try and interview who used to work at the station in some capacity?

Here is the way it should be done (see URL below).  However I don't know
of a source for the coils, because just about all of these circuits are
no longer used, having been replaced with digital circuits such as T1,
etc.  On second thought, the coils may be available for radio stations
which use a phone line for their studio to transmitter link.  I'm
xposting to 3 other ngs to see if anyone there might know.

For sale:

Partial interest in fulltime 1 KW AM in GA. 1490 KHz,
on the air since 1955. Only AM in the county.

(The "Radio Crazy" is back!)

Joint venture. Active or inactive investors with at
least $10,000 each are welcome. Max. percentage
allowed per person is 49 percent. That rule applies to
me also!

All investors would be on the board with full voting
rights if desired.

Total asking price is $75,000 with $25,000 down.

NO repeat NO real estate is included. You heard it
first from me, kiddies! HI!

Studios and transmitter under one roof and leased at
$400.00 per month. Real estate can be purchased at
$75,000. That includes building and about 3 acres.

Tel: (478)741-1710 in Macon, GA.

I am a semi-retired radio engineer. I am NOT a broker,
agent, shill, owner or part owner. Okay! (Sarcastic
leer, tired of being flamed!)

Only those fully identifying themselves will be given
more information.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

I don't see any harm in the postings. from all I know of Meyer, he is on the
up-and-up, and simply trying to put together packages where small investors
can buy a piece of a radio station. that seems to fit one of the purposes of
this board.

While many complain about consolidation, Meyer is at least doing something
to show that small investors or operators can get into radio. While I would
not be personally very attracted to 250 watt stations in Somewhere, ID, I
commend Meyer for trying.

I vote to keep them, although I'm also in no position to buy. They're sort of 'the lighter side of the news'. :)

I don't have a problem with Meyer's posts. Hey, if he gets an AM going and succeeds with it, more power to him. There's no crime in trying. Perhaps you are letting USENET posts get to you more than you really should. Have

Gregg,
Could you please list those 100 stations?  Or is your post Bravo Sierra?
After reading your post and having read most of Meyer's posts, I would have
to say Meyer sounds much more honest and believable than you do.

>From gregg (greggbic@evansville.net):

> I will respond this one time...

I already see a bunch of posts in favor of Meyer Gottesmann continuing
to post his station info. Yours is the only dissenting vote, right
now. (Not that our little straw poll is over yet; it isn't.)

And is it really necessary to call him a crook? Is there a reason you
feel the need to libel the guy?

What's YOUR deal? This isn't the first time you've said what you just
said. Do you have some sort of agenda?

Searching groups.google.com for posts in RRB from you, I see posts from
3/3/02 and 6/24/02 that read like the one I am replying to.

Am I going to have to start dropping your posts from the queue? You
would have the distinction of being the first and only non-spammer to
have this honor.

Food for thought.

I'm pretty liberal in what I'll let through, but libelous crap like
the stuff you post in response to Meyer will not be tolerated, period.
I would like to continue reading your other submissions and would
suggest that you take whatever your problem is to another forum.

**SJS

Nearly every newsreader has what's called a "twit filter." I'm sure you already know that. If you're offended by a poster, put his address in the filter and the quality of your life will improve.

>Does he really think we are that stupid?

I've seen some people make a lot of money on "junky AM stations" once they were well managed. I know someone who bought some of those stations in the Midwest, improved them and has retired with an impressive nest egg. He bought stations out of bankruptcy and made a fortune. As a matter of fact, I had lunch with a friend today whose daughter bought the "junky AM station" she worked for when it went bankrupt. She paid a little over $100k for it. The last offer to buy it in a small market was $3 million. She said no.

>Hey, the man may not be a crook, but I remember getting a resume from
>him waaaay back and it was soooooo weird!!!

I've had great luck hiring people whose resumes look "soooooo weird." In fact, they attract my attention. If you want resumes that look like applications for bank tellers, go into banking.

>Even the titles turn my stomach since I don't actually read the posts
>anymore.

Pepto Bismol, though the resulting constipation might make you even crankier.

>Maybe I am wrong. Prove that this is a useful expenditure of
>bandwidth.

Why do we have to prove anything to you? I'm told the Internet has far more bandwidth that it'll ever use, so a 3kb or so message isn't going to grind it to a halt.

>Will MeyerFans please speak up?

I can't claim to be a "Meyers fan" but I'm not going to burn holes in my stomach over them. My vote is to let them continue.

Rich

I have no problem with Meyer's posting about opportunities to participate in ownership.  In fact sometimes I even find it fun to try and figure out what station it is when he gives vague descriptions.

If someone doesn't want to read them, the answer is simple....don't. Most new newsreaders/browsers have twit filters now days.  Let the complainer do his own filtering.  Let those of us who don't mind seeing them continue to see them.

I think that the Meyer should be free to continue his posts -- allowing these posts is hardly an endorsement by the moderator of how good of business opportunities these stations might or might not be.  For anyone who is thinking of investing, due diligence would certainly be in order no matter who you're buying from, or where you're hearing of the opportunities.

I also can't help but notice that while Meyer is posting under his full name, his critics are using pseudonyms or first name only.  Which frankly makes me question the credibility of those who seem intent on making a stink.

I don't think Meyer has harmed anyone by posting his deals on AM stations. I'm not personally interested in buying a part of an AM station, but I have communicated a bit with Meyer by email. He seems like a reasonable enough guy to me. At least his posts are about RADIO, which is the topic of this forum. If it offends someone that he periodically returns with information about another station for sale, just don't read the post. It's pretty obvious who made it.

I'd like to think that someone who is contemplating investing in a station would do a little more research and give a lot more though to the process than just blindly sending in money from a post on a newsgroup. I haven't heard Meyer ask anyone to do that, but if you'd like more information, he seems perfectly willing to give it to you privately.

At least, his posts are interesting to think about. Many of the posts on this forum can't make that claim.

Dear Mr. Ross:

Sorry but I don't have the schematic for the
Dymek-McKay AM5 tuner but I once owned that tuner and
I can tell you it was one of the finest AM tuners ever
made. I should know! I was once Chief Engineer for an
AM in NYC!

The tuner uses a MOSFET front end and an extra low distortion diode detector and 2 IF bandwidths if I recall.

If you ever want to sell that tuner, for heaven's sakes, let me know.

My tel. is: (478)741-1710.

For sale:

Partial interest in S. Georgia AM radio station. Joint venture. Active or inactive investors with $10,000 min. are welcome. All investors would be on the board with full voting rights if desired.

It is WSFB, Quitman, GA. On the air since 1955. Class "C" (formerly called Class IV) 1490 KHz, 1,000 watts, fulltime. Studios and transmitter under one roof. Leased at $400.00 a month so SORRY kiddies, no real estate with this "Dog"!

But this "Dog" can get well! The total asking price is $75,000.

PLEASE! Do NOT contact the station directly.

FYI, I am NOT a broker, shill, agent, owner or part owner.

Please! NO "AM bashers" or "negative nabobs".

Tel: (478)741-1710 in Macon, GA. I will gladly go into greater detail with anyone calling in good faith.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

> I've seen some people make a lot of money on "junky AM stations" once
> they were well managed.

How true. In my neck of the woods, the small-town FM's have been pretty much bought up by the big groups, upgraded in class and moved into neighboring cities. This leaves the small AM's in the small towns, which the big boys don't want. These stations are excellent opportunities for someone who knows what they're doing, and at least a couple of them here are doing quite well. There is a town near here of no more than 5,000 population where the FM moved away, and the two remaining AM's are hitting hard with local news, sports, etc., and seem to be doing quite well.

Possibly Ron & Fez, a local comedy/talk duo who were the last local talk hosts on the station.  Now at WJFK-FM/Washington, DC in the same time slot.

If R&F weren't on, and they were in another slot (I think they occupied just about every slot there, except AM drive), it may have been Westwood One syndicated talker Tom Leykis.

Mike

Oh neat! It's an easy listening station!!! You don't find too many of those these days.  I really miss that music on the radio.

How many EZ stations are left in the country now? Around 20 or so? Or is that classical...

It looks like it will be KFWB. For now, it has been placed in a blind trust until the station is sold or ownership rules are relaxed even more allowing Infinity to keep the station.

WNEW-FM was running Ron and Fez.

I believe they were already being relayed into DC via WJFK-FM.

It was hard to keep track...since they kept shuffling that show back
and forth so often.

Gregg won't be back, apparently, and not because I banned him. (I
haven't, not yet anyhow.)

It amazes me that Clear Channel even bought groups in tiny markets
like Akron, Youngstown, Ashtabula and Sandusky, Ohio. They even own
Y-102 out in the High Desert of California, where I'm moving in June.
(That station is licensed to Apple Valley... a town that would

probably be considered by most people to be "middle of nowhere.")

Thanks David! :)

So then, I guess that's a good thing.  Personally, I'd think it'd be foolish to tamper with the current formula, correct?  Especially considering there's not all that many other (moneymaking) options for MW radios at the moment.

The Sandusky deal was probably brokered with the Miller Broadcasting
group and they got the FM and the Cleveland station.

It does my heart good to see someone selling a "junky" AM station to
us regular folks instead of CC.  My guess is that either the economy
sucks, CC didn't make them an offer, or they don't WANT to sell to CC.

If that aforementioned Sandusky station came up for sale again cheap,
I might spring some bucks for it and get closer to my roots.

"They," who? Clear Channel never sold anything in Cleveland to Miller,
and Miller has never owned anything in Cleveland to the best of my
knowledge.

The stations in question are WCPZ/102.7 and WLEC/1450. Also, CC now
owns WMJK/100.9, licensed to Clyde, Ohio (Majic 100.9, and they stole
the logo and look-and-feel from Clear Channel's WMJI/Majic 105.7 in
Cleveland). I don't recall whether Clear Channel owns any other
stations in the Firelands region.

| >>
| As a matter of fact, I had lunch with a friend today whose daughter bought
the
| "junky AM station" she worked for when it went bankrupt. She paid a little
over
| $100k for it. The last offer to buy it in a small market was $3 million.
She
| said no.
| >>
|
| Sounds like Mary.
|
| Her and her family have indeed made a small fortune in small market AM
radio.

For everyone, there is a niche. And a little jealousy overriding a
productive use of time, will go a long way in helping an angry individual
with theirs.

Jeff in Sa-ra-so-ta

Amateur Radio Newsline™ Report 1337  March 28, 2003

Amateur Radio Newsline report number 1337 with a release date of Friday, March 28 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Keeping a repeater on the air in New Zealand could become very expensive and Australia considers complete restructuring of its Amateur Radio service.  Find out the details on Amateur Radio Newsline report number 1337 coming your way right now

(Billboard Cart Here)

**

## RADIO REGULATIONS:  NEW ZEALAND MAY START REPEATER LICENSE FEES

Ham radio operators could soon be paying a lot of money to keep a repeater on the air in New Zealand.  This as government regulators down-under look at instituting a new license fees that could make keeping a system on-the-air prohibitive for many clubs that sponsor multiple machines.  Amateur Radio Newsline's Jim Meachen, ZL2BHF,  is in Auckland New Zealand with the rest of this breaking story:

--
NZART stands for The New Zealand Association of Radio Transmitters and it is

the official national ham radio society here in New Zealand. It also functions much the same as the ARRL in the United States and is a member of the International Amateur Radio Union.

NZART has received proposals from government telecommunications regulators that could cost hams in this nation a lot of money just to stay on the air.  What the New Zealand regulators want to do is go to lifetime licensing with a one off license payment, That’s the good idea. But there is more.

Regulators have also proposed fees for repeater and beacon licenses that are just plain unacceptable to NZART or the New Zealand ham radio community.  Right now there is no repeater or beacon license fee. Under the proposed revision, there would a NZ$250 initial fee to put a one on the air and an on-going annual NZ $200 charge per system to keep it on the air. Currently the NZ to US Dollar exchange at just under 2 for 1.

The current no fee for beacons and repeaters was introduced some years ago for good reason.  This proposal is a very significant policy change with what NZART says are serious and unacceptable implications.  This is because, by definition and by international agreement, the Amateur Service is non-pecuniary and by international agreement cannot be used for money-making. Unlike other services that can pass on costs to others, in the world of Amateur Radio, there are no "others".  As a result, the NZART
intends to oppose this one, all the way.

Reporting from below the Southern Cross in Auckland New Zealand, I’m Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

An example of what Jim was talking about?  Since each repeater would pay the $200 license fee, a club with 5 systems -- which is quite common -- would be paying $1000 New Zealand dollars every 12 months.  (NZART)

**

RESTRUCTURING:  WILL AUSTRALIA CHANGE ALL?

The debate in Australia about the need for a new Entry Level license has now been expanded into a call for the review of the entire amateur licensing system.  Q-News Graham Kemp, VK4BB, in Brisbane is here with the details:

--

A research report entitled "Amateur radio and the challenge of change"  has been co-authored by Jim Linton VK3PC and Roger Harrison VK2ZRH. Here is Jim Linton VK3PC giving a summary report of the Linton-Harrison  Paper 2003.

--

(Note:  This is an expanded version of what is found in the audio newscast)

VK3PC:  “Amateur radio is at the crossroads, it can continue straight ahead down hill and virtually disappear, or set its own path by changing the amateur licensing system.

The time to act is now. When the UK Foundation License was introduced at the beginning of last year, there was not instant support for Australia to take a similar approach. However, some 15 months later there is majority support for a new license in Australia.

What the Linton-Harrison Paper 2003 does is to refocus the debate on the entire licensing system in Australia, the types of licenses, the syllabuses and examinations. We must not be tempted to simply copy the UK Foundation License. It does not meet Australian conditions and needs, and will not provide the necessary sustained growth for amateur radio here.

Australia's new Entry Level License should not be strictly an "operators' license" - a simple permit to use a type-approved transceiver. Entry Level Licensees should be able to enjoy the thrill and satisfaction of operating a radiocommunication system under as many circumstances and conditions and on a wide variety of bands across the RF spectrum as they wish to explore. This should be in keeping with long-standing amateur radio tradition and in line with the ITU definition, which says amateur radio exists for the purpose of self-training, intercommunication and technical investigations.

There will be changes to the licensing system as a direct result of the World Radiocommunications Conference in Geneva later this year where the mandatory Morse code testing requirement is to end.
The amateur radio community and the Wireless Institute of Australia must be ready to take action to revitalize the amateur radio licensing system at the earliest opportunity.

If the right action is not taken, the decline of amateur radio that the Linton-Harrison Paper identifies as being in now its 6th year, will lead to its ultimate demise.

Again, sustainable growth is absolutely essential. It is important to encourage people into the hobby who retain their license and their interest in amateur radio. A hobby that continues to interest, challenge or reward them.

Linton-Harrison advocates a two license system. An Entry Level with a syllabus set at a basic standard, along the lines of the original intention of the Australian Novice license. An Unrestricted License with a syllabus that is revised to comply with the ITU Recommendations for amateur licensing.

The Linton-Harrison Paper describes the current Novice and AOCP syllabuses as being "bloated" and beyond what is expected internationally. The WIA Federal Council agrees.

The current Novice license standard is recognized as being too high. It should not take 40 weeks study to get an amateur license. The Novice license is equivalent to the United States Technician License.

The current AOCP examination is also not relevant to the needs of today, and is at least two decades behind the times. The Linton-Harrison Paper calls for the whole licensing structure, the examination system and syllabuses to undergo a fundamental rethink. In its 8-pages the Paper covers much more than I can in this audio report.

--

Linton and Harrison wrote a similar paper in 1985 that is still being referred to today. (Q-News)

**

RESCUE RADIO: THE PARTNERSHIP FOR PUBLIC WARNINGS DRAFT IS NOW AVAILABLE

Here in the United States as well as around the world, letting the public know that an emergency situation is taking place can save lives. Because of this government agencies as well as the private sector are always trying to find betters methods of issuing alerts.

Now, comes word of a draft document for a new United States national emergency warning strategy from a group called the Partnership For Public Warning. A plan that some say holds the potential to truly modernize the way the public is informed.

For those not aware, the Partnership for Public Warning is a national organization formed in November of 2001. Its Board of Trustee’s include representatives from every area of public warning communications including at least one radio amateur. The stated goal of the Partnership for Public Warning is to promote and enhance efficient, effective, and integrated dissemination of public warnings and related information so as to save lives, reduce disaster losses and speed recovery.

This document they have released is said to represent the first time anyone has proposed an overall emergency warning strategy for the United States. The concepts outlined help to look ahead to more advanced warning systems than the current E-A-S, weather service products, and other offerings. After reading it, the Partnership for Public Warning invites your participation and comments. You will find it in cyberspace at:
http://www.ppw.us/ppw/docs/nationalstrategy.pdf (GCC, PPW))

**

RESCUE RADIO: S.DAKOTA EMERGENCY COMMS LOOSE TOWER

The town of Mitchell South Dakota has last its 180 foot communications tower used for public safety and public radio. According to Jeff Pierce of the South Dakota Bureau of Information and Telecommunications, the tower fell Tuesday, March 18th after a ground anchor rotted and gave way.

Pierce said it knocked out State Radio communications used by law enforcement and other agencies, though nearby towers picked up that radio traffic. South Dakota Public Radio in the area was off the air until a portable tower was put up the next day but reception of weather alerts will not be possible until the fallen tower is replaced. Also, Mitchell police have not been able to use handheld radios and instead must rely on radios in their cars. A replacement tower should be installed and operational the week of April 1st. (CGC)

RESCUE RADIO: NJ HAMS RESPOND FOLLOWING PROPANE BLAST

New Jersey radio amateurs were called up following a large propane explosion in the city of Newton the weekend of March 8th. Amateur Radio Newsline's Ken Locke, N8PJN, has the rest of the story:

--

It was Robert Stepanek, N2TTT who put out the call for more assistance. Stepanek is the ARES District Emergency Coordinator of Susan County who requested assistance in the form of additional operators after a propane tank exploded in the town on Newton New Jersey on March 14th. Hams from several other New Jersey counties responded.

Amateur radios' primary role was to provide back-up relief shelter communications. Many of the evacuated residents were sheltered by the Susan County Chapter of the American Red Cross.

Pat Day is the Executive Director of that Red Cross chapter. According to Day, about 1000 residents who were forced out of their homes. Those who did not have other places to stay went to nearby shelters operated by the relief agency where some stayed until March 16th. Hams from Somerset, Union, Morris and Hudson
counties volunteered during the emergency.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN, reporting

--

Rich Krajewski, WB2CRD is the Public Information Coordinator for the ARRL's Northern New Jersey Section and provided most of the information for this story. (WB2CRD)

**

RESCUE RADIO: KILLER TORNADO HITS GEORGIA

Amateur Radio operators in southwestern Georgia have been helping in the wake of tornadoes that hit the region on March 20th. The storms left six people dead and over 200 injured. Georgia's Governor has declared a state of emergency in two of the hardest hit areas.

According to an ARRL Bulletin, ARES was activated in Mitchell, Worth, Lee and Dougherty counties. There, hams have been assisting various relief agencies including the American Red Cross, the Salvation Army and Georgia Baptist Disaster Relief.

ARES members of the Albany Amateur Radio Club also responded. Most of them are Red Cross volunteers. They took emergency response vehicles to the affected areas to feed victims and provide communications.

The ARRL Lee County Georgia Emergency Coordinator is Bob Smith, K4PHE. He says that several ARES members have been volunteering continuously since the tornadoes hit. (ARRL)

**

ENFORCEMENT: NY HAM WARNED ABOUT INTERFERENCE

A Patchogue New York ham has been told that he could face a fine of up to $7500 if he continues to violate the Amateur Service Rules. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Anthony Satornino, N2QPY, was issued a Warning Notice concerning deliberate interference with other licensees' on the 2 meter Amateur band and engaging in unlicensed operation in the 10 meter band."

--

Satornino was also asked to clarify his actual address for FCC records and to do so within 20 days. (FCC)

**

ENFORCEMENT: THE FCC VS. K1MAN - AGAIN

The FCC has again written to Maine radio amateur Glenn Baxter, K1MAN, regarding he operates his Amateur Radio station. Amateur Radio Newsline's Paul Courson, WA3VJB, is in Washington with the details:

--

In its latest letter to Glenn Baxter, K1MAN, the Commission says he has not corrected problems that prompted their letter in January, which was based on monitored information and numerous complaints to the FCC.

The FCC claims that Baxter's Amateur Radio station is apparently being used for broadcasting non-ham radio matter including programs, talk shows, and children’s shows.  The agency also alleges transmissions from his station are being used for deliberate interference and for communications where Baxter apparently's trying to make money.

The FCC also notes that some of the transmissions start and stop erratically, and leave the air with no identification as required by Commission rules.  An enforcement official who wrote the letter said such operation indicates the transmissions are not under the control of a licensed operator.

The FCC goes on to say that the transmissions from Baxter’s station are tape recordings, which themselves wouldn't be illegal, but that in some cases it sounds to the FCC as if the recordings may have been questionably taken from an answering machine and off the telephone and broadcast without full compliance with the law.  Enforcement authorities also wrote some of the transmissions are repetitive, apparently for weeks, of the same telephone calls.

Baxter has raised controversy for years with what he portrays as a daily bulletin service on 14.272, 3.972 and 3.890 MHz, prompting interference complaints from sideband and AM communities alike.

Baxter has patterned his program to the style of commercial talk radio, right down to having a toll free telephone number for listeners to call in and chat. The FCC wants Baxter to respond to its latest letter to decide what if anything to do next.

For the Amateur Radio Newsline, I'm Paul Courson, WA3VJB, near FCC headquarters in  Washington.

--

This latest letter to Baxter came from Vincent F. Kajunski who is the FCC’s District Director in Boston Massachusetts.  Kajunski also directed K1MAN to submit weekly reports detailing certain aspects of his stations on air operations.  (FCC)

**

## ENFORCEMENT:  ALASKA  BROADCASTER FACES FINES $137,000

A Christian broadcaster is facing up to $137,500 in fines for alleged wetlands damage on Alaska’s Kenai Peninsula.  Fred Vobbe, W8HDU, of the National Radio Club’s D-X Audio Service has more:

--

The Anchorage Daily News reported on March 13th that  Alexander Kozned of Ninilchik poured gravel and other fill into about three and a half acres of protected wetlands, as well as a stream and intertidal zone that drains into Cook Inlet.

The charges against Kozned come in a complaint filed this month by attorneys for the United States Environmental Protection Agency.  The alleged violations are reported to have taken place during the summer of 2002 on Kozned's property a few miles north of Ninilchik. That’s a location where he reportedly wants to install a broadcast antenna array to broadcast religious programming to Russia and China.

An attorney for Kozned said the area affected is less than a tenth of an acre and that volunteers, not knowing about the wetlands, made an honest mistake. He also claims that the EPA's reaction amounts to overkill.

But officials at the federal agency said Kozned knew of the wetlands and filled them without a permit, despite a 1998 warning. The E-P-A and the U.S. Army Corps of Engineers issued cease-and-desist orders at that time after discovering that Kozned used earth-moving and road building equipment on wetlands to build antenna pads. The E-P-A ordered Kozned to restore and revegetate the wetlands he harmed. Kozned complied and was not fined in that case.

For the Amateur Radio Newsline, I’m Fred Vobbe, W8HDU.

--

The charge marks his second run-in with federal environmental regulators. (Anchorage Daily News)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: A NEW KIND OF POP UP SPAM

As if junk e-mail and pop-up ads weren't annoying enough on their own, now there's pop-up junk e-mail. This, as the result of a developer of bulk-mail software has figuring out how to blast computers with pop-up spam over the Internet through a messaging function on many Windows operating systems. Amateur Radio Newslie’s Bruce Tennant, K6PZW, is here with more on how it works:

--

The software is called DirectAdvertiser. The company that developed it is reportedly based in Romania. In recent weeks, Internet users have reported receiving pop-up messages such as one touting university degrees without classes or books.

DirectAdvertiser does not hack into computers. Rather, it uses a part of the Windows operating system called Messenger. It comes turned on by default with many Windows systems including 2000 and XP. Its meant for system administrators to broadcast service notices and should not to be confused with the various other instant messaging programs.

DirectAdvertiser was first reported by Wired.com, and appears to represent the latest attempt to bypass the increasingly sophisticated e-mail spam filters employed by leading Internet service providers and individual users. It also appears to circumvent federal and state laws designed to curb junk e-mail.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting

--

There is one major fault to DirectAdvertiser that makes it easy to beat. To receive the pop-ups Windows Messanger must be turned on. If you don't want to get them -- just turn Messanger off. (OnLine Technology)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM SEEKS PAPERS

The 2003 AMSAT-NA Annual Symposium, scheduled for October 17 to the 19th in Toronto Canada has put out its first call for papers to be presented at the event. The subject matter should be of general interest to amateur radio operators involved in satellite communications.

Papers may be presented by the author during the Symposium or simply offered for inclusion in the Symposium Proceedings publication. A brief abstract of the proposed paper should be submitted as soon as possible. The final date for abstracts is June 15th with copy ready papers must be received no later than August 15th. Electronic submittal is preferred in Microsoft Word format.
E-mail electronic submittals to Wayne Chandler at ve3whc@amsat.org (AMSAT)

**

INTERNATIONAL - AFGHANISTAN: NEW KANDAHAR RADIO STATION TO BE LAUNCHED

On the international scene, the Boston-based N-G-O Afghans for Civil Society has announced that former BBC producer Akhtar Kohestani will serve as station manager for Afghan Independent Radio or A-I-R. This is a new station which is to be launched this spring.

A-I-R will be the first independent radio station to be based in the former Taliban stronghold of Kandahar in southern Afghanistan. Plans are under development for program sharing with the BBC, Radio Free Europe, Radio Liberty, the Voice of America and Radio Afghanistan. (Stewart McKenzie)

**

INTERNATIONAL - POLAND: NEW BANDS FOR SP HAMS

Also, SP5HS reports that Poland's new national frequency allocation table came into effect on February 27th and its pretty good news for that nations hams.   The new rules allows S P amateurs to use the 136 kHz band, while the 50 MHz band is now allocated to amateurs in Poland on a secondary basis.  6 meters is still shared with government services.  (GB2RS)

**

BEACONS: 2 METER K7XC/B ON THE AIR FROM NEVADA

A new 2 meter propagation beacon is on the air from the state of Nevada. Amateur Radio Newsline's Don Wilbanks, AD5DW, tells us who put it on and where to find it:

--

Tim Mareck,  K7XC reports that the 2 Meter beacon operating under is call sign is now installed at it's new mountain top home here in grid square DM-09.  Tim says that its on 144.288 MHz and operating from 4900 feet atop Lahotan Peak. This is above the Lahotan Reservoir near Silver Springs Nevada.  Currently, the beacon consists of a 10 watt C-W transmitter into a single K-Q Loop at the 30' level on the tower.  If you hear it, you can be pretty sure that 2 meters is open to Nevada from where ever you are.

Tike adds that the next project is a 6 meter beacon from the same site.  It will use a Yaesu FT-620B running at 10 watts into a old style KB6KQ loop.  This antenna will be placed 2' above the 2 meter loop on the same mast.  Tim's target date to complete this phase of the project?  He says hopefully sometime in June.

--

Again, the frequency of the K7XC beacon is 144.288 MHz.  If you hear it you can send Q-S-N reports to Tim by e-mail at timm@cccomm.net  (VHF Reflector)

**

DX

In D-X, six German operators will be active as A-35-X-M from Tonga to the 4th of April.  They will concentrate on working Europe.  More information is at www.df3cb.com/a35xm  (OPDX)

And Tim Totten, N4GN, reports that all Oh-J-one thru Oh-J-8 QSL cards for W-R-T-C 2002 have been printed and ready for release.  If you want to obtain your QSL cards directly, send an S-A-S-E before April 15th to Toni Linden, OH2JTE, Ohratie 16E218, 01370 Vantaa, Finland. Tim also says that plaque and T-shirt and Early Bird submission   winners can be viewed at the following site.  Its out there  in cyberspace -- at www.n4gn.com/wrtc.  (N4GN)

**

## THAT FINAL ITEM: YHOTY 2003 NOMINATIONS SOUGHT

And finally this week, the nominating season for the 2003 Young Ham of the Year Award is now open. Our producer, Bill Pasternak, WA6ITF, is here with the details:

--

Each year, we at the Amateur Radio Newsline join forces with Vertex-Standard and C-Q Magazine to honor the accomplishments of a young radio amateur who has contributed in some special way to the hobby or to society through the hobby.

The rules are still the same. A nominee must be age 18 or younger, hold any class of Amateur Radio license issued by the FCC and live in the contiguous 48 states. And this year, thanks to Kevin Boudreaux, N5XMH, its easier than ever to file a nomination.

Kevin was the 1993 Young Ham of the Year award winner. He has now created a new on-line home for the award that has all the information, rules and downloadable forms needed to submit a nomination. And Kevin has taken it a step further. He has also created our first-ever fill in the blank on-line nomination form. Just provide the information on-line, click at the bottom of the page and your nomination is on its way to us.

After you finish filing your nomination, please click on some of the other pages and take a look around. You will find it in cyberspace at www.yhoty.org/2003.htm . There is also a link to it from our website at www.arnewsline.org . Printed forms are available for an SASE to the Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350.

--

Our thanks to Kevin Boudreaux, N5XMH, of Dynamic Marketing for taking the time to create this new website. He is one Young Ham of the Year who is still an important part of the award. (ARNewsline™)

**

## NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Norm Seeley, KI7UP, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Two of our stations went off the air abruptly Wednesday at 6 A.M. when the T-1 line we use for an STL went down. The local telephone company took until this afternoon to get the line back up. The cable department said the problem was something electronic (and therefore not their problem), while the "special services" people kept insisting it was a bad pair (and therefore not their problem).

Meanwhile, we lost two days worth of business on two stations.

What a bunch of bozos.

umar

Read your contract with them carefully. You might be able to claim the
damage.
Ruud

I find having two independent ISPs eliminates provider frustration,
pretty much.  Use the one that works when one doesn't work.

I imagine having an alternative mechanism would have a similar effect
in broadcasting.

You don't have an analog STL as a backup? There's something to be said about
redundancy.

Kick and scream as if your life depends on it.

If you dont get a reaction before the business day is over, go down to your actual COB (telco central office) and have a nice 'discussion' with them. They allways seem to 'like' that.... but in my experience, you usually get stuf done the easy way.

The techs always go there between jobs, and its pretty simple for them to track something down there if a pissed off business customer actually comes in and wont leave till the problem is dealth with, or begins to be dealth with.

Of course, you usually have to socially engineer your way into the cob, but after explaing your situation... and telling them (turn to 9x.x FM and tell me if you hear anything) really helps too.

;-)

The studios don't have line of sight to one transmitter site and only a grazing path to the other. Sometimes the STL works and sometimes it doesn't. On this particular occasion it didn't, so we were S.O.L.

I should mention that the permit granted us to occupy the premises contains a "no antennas" clause which we violated in putting an STL antenna on the roof. There is a local ordinance strictly prohibiting any sort of tower except at a handful of specific locations, none of which is ours.

At WOR we did a yearly radiothon for a children's charity. Two years ago telco screwed up badly. ISDN drops weren't made and the telephone banks weren't working.

We called to top honcho and repeatedly mentioned on the air what the cause of the problem was. It got fixed and we were able to get them to contribute $50,000 to the charity. They don't like it when we mention how badly they're screwing up on the air.

In Boston, WJIB (the original one) often had Boston Edison problems. We had a generator at the studio and repeatedly mentioned that Edison was not cooperating. Turns out the top honcho at Edison was a listener. He got help there fast. Nearly every time we had a problem he'd call the station to make sure it wasn't Edison's fault.

At one point, Telco sold our equalized 15KHz STL lines to someone. They removed the equalizers. We kept explaining to listeners why we sounded so bad. It got fixed fast. Another time they set us up with stereo lines that ran so far apart (44 miles) that phasing was terrible. Another round of mentions got us equal length lines.

Never be afraid to let your listeners know when a utility is causing you trouble.

Rich

Have your communications attorney look into that. FCC regulations may
override any local ordinance if it prevents you from serving your
market..

>What a bunch of bozos.

Whenever Telco gets involved between a studio and a transmitter I get
nervous. At WOR we had a huge phone cable cut by construction workers
who thought the copper was worth something. We lost all phone lines.
Since our STL was microwave we were still on the air.

Since I don't trust telco with POTS I don't want them controlling my
digital connections to the transmitter.

Rich

Can anybody here put me on to newsgroup(s) dealing with amateur FM
broadcast?
We are setting up a radio station at my school.

Thanx

Publish an article in a newspaper or magazine.
Call a talkshow.
Post to Usenet.
Send letters to trade journals.
I could go on.

> I have no problem with broadcasters expressing particular points of
> view; but they ought to leave some room on their airwaves (which,
> after all, are *our* airwaves) for the views of people who disagree
> with them.

But if they don't, there are many other ways to make yourself heard.

It isn't just a right, it is a mandate under the terms of the station
license. The license of a radio station MUST maintain control of its
airwaves at all times. If it does not, it loses the license.

> Are you
> advocating that a radio station should be forced to play a song it doesn't
> want to?  Because if you aren't, then you have no argument.

Any station that played anything that it did not deem suitable for the
airwaves would be in very serious trouble.

This is the "Me Journalism" of the 90's and 00's rearing it's ugly head. Just as Jim Gray did at the All-Star game a couple of years ago.  BEING THE STORY, rather than reporting it.  Maybe there is something to be said for the "good old days".

Unfortunately, the people (read: children) who listen to this combination of sounds (read: noise) are in the 18-25 demographic range. Prime real estate for advertisers and PD's desperately seeking a format.

Hi,

I'm looking where to find or to buy next items:

- Semi-rigid coax or rigid coax

- low impedance Teflon coax (to make broadband transformers)

- other good resources to make some FM amplifiers 50-100 MHz ( 300-600W)

- ferrite breads and cores

Thanks !

Let us not be over dramatic here about the "me" generation.....back in 1984 or so the play by play announcer for the Universtiy of Evansville got a technical for remarks he made as the official ran past him. He was fired at the end of the season I think....however....he then got hired to do PBP for an NBA team. Seems the NBA liked the passion of the guy. I'm sure there are older stories too.

My Dad was a High School principal in the 1970's and used to have to keep an eye on certain parents who might charge the floor over a bad call.

And who can forget Woody Hayes and the famous punch?

You gotta have passion for the game....just not too much passion!

Does anyone have any current information about progress being made, if any, for a new CP from 2001 in the Los Angeles area for 1500-AM, licensed to Culver City, with the call letters KIEV??  This would replace the old KROQ-AM on 1500 from Burbank, which went dark around 1984. (Anybody know why KROQ-AM went dark??)

This new CP for 1500 says it would be 50 kw days and 7.1 kw nights from xmtr site off the Pomona Freeway between Monterey Park and Montebello...

In the late 1980s and 1990s, this CP had the calls KRQR, I believe, and the licensee for the CP is out of Sacramento, Royce Intl. B.C.,

Any new details would be appreciated...Anyone think this will get on the air??
Hard to believe a new stand-alone AM in L.A. could make it.

Details:  www.FCC.gov: search: Facility No 57893

Thanks.

Jim Hilliker
Monterey, CA

AMERICA AT WAR:  HAM RADIO PREPARES

America's terror threat level has again been raised to "Code Orange."  This in the wake of President Bush’s ultimatum to Iraqui dictator Saddam Hussein. And with our nation on high alert for terrorist attacks, Homeland Security Secretary Tom Ridge outlined a national plan Tuesday March 18th.  One that he said would increase America's at-home defenses.  Part of it is in the area of personal communications.  Amateur Radio Newsline’s Norm Seeley, KI7UP, has the latest on this and the way ham radio can be prepared:

--

The plan, which Homeland Security Secretary Tom Ridge has named Operation Liberty Shield heightens security at the nation's borders, airports, seaports and railways.  It also provides additional security at nuclear and chemical plans along with protecting elements of the nation's food supply and distribution system.

As you have probably heard in other n ews reports, vehicles are again will be subject to random inspections on roads leading into and out of airports, sea-ports and similar facilities.  Most of those who will making inspection stops are probably unaware of ham radio equipment and why hams have it in their cars.  Akll they will sdee is a different kind of radio that they have never experienced before.  So, for the forseeable future Amateur Radio operators would be well advised to carry a copy of their license with them if they are driving a vehicle equiped with an antenna array anyplace close to a high security area.  Its much simpler to show you ham ticket to the inspector than to try to explain the hobby while a long line of cars behibd you are honking their horns.

Also suggested by Holeland Security is for every family put in place an emergency communication plan.  This plan should be specific to a given family unit, understood by all of its members and practiced regularly.

Some experts have recommended that a family communications plan not be totally dependant on land based or cvellular telephones that can easily become overloaded in an emergency.  Recommended are forms of personal radio including FRS and the new M.U.R.S. service.  Families where all members are licensed radio amateurs have a definite advantage here.  If your wife and kids are not yet hams, now might be a hood time to make getting them all tickets as a super high priority.  Three places on the web you can find training information are www.arrl.org, www.w5yi.org and www.gordonwestradioschool.com.  And gordonwestradioschool is one word.

Radio amateurs involved in civil defense and disaster preparedness should now be on high alert as well.  Radio gear should be in tip-top shape, tested daily and H-T batteries should be maintained at full charge.  Do the same spare battery sets.  Also, have one or more sets of alkaline cells ready to go.  If the power goes out you will have no way to quickly recharge your NiCad or NiMH packs.

If you belong to an emergency service group like ARES or RACES, make sure your leaders know how to contact you 24 hours a day, 7 days a week.  Take part in regular any scheduled on-the-air drills so that you will be knife-edge sharp if your services are needed.

And if you have never had Emergency Communications training, don't wait.  The ARRL is the only national Amateur Radio group certified to provide you with the schooling you need and courses are available right now.  As soon as this newscast is over we urge you to go to the League's website at www.arrl.org and to sign up.

Meantime, the American Red Cross is urging families and individuals across the nation to make appropriate preparations.  The relief agency suggests everyone follow the Red Cross Recommendations for the Homeland Security Advisory System. It's on the web at www.redcross.org.

For the Amateur Radio Newsline, I'm Norm Seely, KI7UP, reporting.

--

We will have more on ham radio and its part in defending America against the threat of terrorism in future Amateur Radio Newsline reports.  (ARNewsline™)

**

## AMERICA AT WAR:  PROTECTING THE NATIONS COMMUNICATIONS

With war now reality and  the possibility of terrorism, leaders from the telecommunications, Internet Service Provider, satellite and cable industries have begun consideration of widespread recommendations to help restore communications services in the event of an attack on the nation's communications infrastructure.  Some of the recommendations were presented by members of the Network Reliability and Interoperability Council at its quarterly meeting March 14th at the FCC.

In developing what the group calls its best practices for service continuity and disaster recovery, the industry representatives identified and analyzed more than 200 such concepts.  These cover a wide range of scenarios.  And for the first time in the area of cyber security the communications industry has conducted a thorough assessment and analysis of its vulnerabilities.

The 56-member council vote on which recommendations to put in place will be completed on  March 28th.  (Published news reports)

## HAM RADIO IN SPACE:  ARISS TO CONTINUE WHILE SHUTTLES ARE GROUNDED

The grounding of America's Space Shuttles following the February 1st Columbia disaster has not had any major impact on Amateur Radio.  Roy Neal, K6DUE, brings us up to date on whats happening in the shuttle program and with manned ham radio in space:

--

The announcements by NASA that its having Boeing build a new Orbital Space Plane and that it hopes to have the remaining Space Shuttles back in the sky by this fall signal a turning point for the space agency.  It is telling the world that things are getting back on track.

But in there here and now there are still several months before full space operations resume.  Amateur Radio on the International Space Station Chairman Frank Bauer, KA3HDO, says that ARISS is prepared for any eventuality.

According to Bauer, until the shuttles fly there will be less scientific work taking place on the International Space Station.  This is because of the reduced on-orbit staffing of two member crews.

Bauer believes the most probable scenario for a crew change will be what we reported two weeks ago.  That U-S Astronaut Ed Lu, KC5WKK and Russian Cosmonaut Yuri Malenchenko will fly to the I-S-S on a Soyuz rocket to become the Expedition 7 crew.  But Bauer adds that Astronaut Mike Foale, KB5UAC, is a back-up for the crew -- also in training -- just in case he is needed.  He also notes that Astronaut Pedro Duque, KC5RGG, who planned to use the ARISS equipment on the upcoming Soyuz transport flight, will now probably fly in the fall.

Baueer says that the only major setback for ham radio so far concerns upgrading the I-S-S ham station itself.  According to KA3HDO, with the shuttles not flying,  consumables like food and water are the highest priority items to be launched on the upcoming Progress re-supply missions.  This means that the ARISS hardware that was planned to be flown this year will probably be delayed.  The gear waiting for transport includes the Slow Scan Television  equipment, plus Kenwood D700 and Yeasu FT-100 radios and the Naval Academy’s P C Sat 2 ham satellite.  Bauer says that this equipment will be kept ready for any upcoming transport flight opportunities to the I-S-S.

The good news:  Bauer says that the opportunities for school contacts will remain at the same.  Look for them at a rate of at least two a week.  Maybe more if the Expedition 7 crew finds itself with extra free time.

Right now, it appears as if ARISS operation from the I-S-S will continue on as it has since operations resumed.  This, as investigators on the ground work to determine what caused the Columbia to disintegrate as it attempted to land last month and get ready to return the rest of the shuttle fleet to service later this year.

For the Amateur Radio Newsline, I’m Roy Neal, K6DUE.

--

The only item not touched on by Bauer was open contacts with the ham radio public.  These tend to occurr only when the crew has some unscheduled free time.  (ARISS)

RESCUE RADIO:  UK RADIO CLUB FIRE

Back on Earth, a radio club meeting is interupted by a fire.  It happened in the U-K and Jeramy Boot, G4NJH, joins us from Nottingham Englanmd with the details:

--

The Bredhurst Receiving and Transmitting Society's quiz night on the 6th of March was interrupted by what all members present assumed to be a power cut. However, club member Terry Wheeler, G7MIM, went out to investigate and discovered that a fire had broken out in the room above the club. He calmly asked the members to leave the premises and the evacuation of the building took place in a swift, orderly and calm manner. Richard, G7PPE, tried to open the door of the flat above the club room where the fire had started as the occupant was still inside, but was unable to break down the door. Fire crews arrived in a matter of minutes and the occupant was rescued and taken to hospital.  Jeramy Boot, G4NJH.

--

Jean Darley, G1DLL, the Secretary of the Bredhurst Receiving and Transmitting Society says -- and we quote:  "It's never a dull moment if you're a member of our radio society."  G1DLL is also now trying to find an alternative venue for the club to meet.  (GB2RS)

**

RADIO LAW:  ANTENNA PROTECTION - CALIFORNIA TRIES AGAIN

If at first you don’t succeed, try again.  And that’s exactly what hams in California are doing as they try to convince the state legislature and the governor that its time to offer protection for their antennas and towers. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--
March 26th is the date for a legislative hearing on California's latest attempt to pass an Amateur Radio antenna protection bill.  The ARRL Letter says that Assembly Bill 1228 was introduced February 21st by Assemblyman Bob Dutton.  It has been referred to the Committee on Local Government for consideration.

ARRL Pacific Division Director Bob Vallio, W6RGG, and the League's antenna expert Dean Straw, N6BV, are among those scheduled to testify on behalf of AB 1228. Several others also plan to attend.

Back in 2000, the California Legislature passed a bill incorporating the essence of PRB-1, but Governor Gray Davis vetoed the measure. At that time the Governor said his opposition stemmed from a lack of budgetary funds to complete the required studies and his personal belief that amateur antennas should be considered a local rather than a state issue. The earlier California measure had carried a price tag of between $70,000 and $100,000 to fund studies and a model ordinance that lawmakers required.

Organizers behind the current bill say the new measure, being called "The Emergency Communications Enhancement Act," will not carry any price tag. A copy of the current legislative proposal is available on-line the California State Legislature web site.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So far, 16 states have incorporated the essence of PRB-1 into their laws or have approved Amateur Radio antenna legislation that includes minimum regulatory heights for antenna structures. (ARRL)

**

RADIO LAW: CALIFORNIA WORKING TO MOBILE CELL PHONE BAN

Still in the Golden State, a bill requiring cell phone users to use handsfree devices while driving has been adopted by a powerful California Assembly committee. Bill Pasternak, WA6ITF, has been following the story and has the latest developments:

--

The measure passed the California Assembly Transportation Committee on a 14 to 5 vote on Monday March 10th. This, after falling a single vote short of passage for the past two legislative sessions.

The bill's author is Assemblyman Joe Simitian, of Palo Alto. He has called the committee's approval the first step to saving lives on California roads and highways.

Under the Simitian's bill a first offense for using a cell phone while driving a motor vehicle would result in a mandatory $20 fine. Subsequent violations would carry a maximum fine of $50. Drivers could use handsfree cell phones without threat of a penalty.

The measure is exclusive to mobile cellular telephone use. It reportedly excludes all other forms of two-way radio communications. The bill now heads to the state Appropriations Committee for further hearings.

Reporting from near the city of Valencia California, I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

If the measure eventually becomes law, California will become the second state to require handsfree use of cell phones by drivers. New York was the first back in 2001. (ARNewsline™ from various reports and sources.)

**

ENFORCEMENT: FCC ALLEGES NUMEROUS VIOLATIONS ONB MICHIGAN REPEATER

A pair of Michigan repeater operators have been told to cease operating their systems under automatic control. This, as the FCC launches an investigation into charges of several rules violations. The agency’s Daryl Duckworth, NN0W, has more;

--

Duckworth: “The Detroit District Director issued an order to cease autonmatic control of Amateur repeater station K5YHA to Sheri Gilbert and an order to cease automatic control of Amateur repeater station K5EKP to William Gilbert, both of Lupton Michigan. Both stations are under review by the Enforcerment Bureau for apparent violations of the Commissions rules inccluding inadaquite station control and deliberate interference.”

--

In a letter February 24th letter to the Gilberts, FCC Special Counsel Riley Hollingsworth alleges that numerous rule violations have taken place on the repeater. Also that the repeater is the source of interference to the K8GER system. He said that Violations on the repeater consisted of failure to identify by some users, use of false or misleading call signs by users and failure to have a control operator for the repeater. Hollingsworth alleges that back in January the Gilberts’ apparently turned the operation of the repeater over to a car rally. During that time several of these type of rule violations occurred for more than 12 hours during a two-day period.

The letters warns the Gilberts’ that that if they are unwilling or unable to prevent violations on their repeater, then their Amateur operator and station licenses will be subject to enforcement action by the Commission. This could include a fine, operator license suspension or station license revocation. The Gilbert’s have since informed the FCC that the repeater has been taken off the air. (FCC)

**

AT THE FCC: NOW WE HAVE COALS

The acronym laden Federal Communications Commission has added COALS to its dictionary. This, as the regulatory agency begins implementation of the Cable Operations and Licensing System by Report and Order on March 13th.

With COALS the FCC has expanded its electronic filing capabilities to make it easier for multichannel video programming distributors to submit applications, reports, and other documents. The FCC says that COALS also makes license and cable operational information more accessible to FCC staff. This in turn makes for more efficiency in monitoring spectrum usage and competitive conditions in the cable and multichannel video marketplace. The FCC adds that the introduction of COALS represents more progress in the FCC’s own modernization initiative. (FCC)

**

RADIO RULES: MEDIA OWNERSHIP HEARINGS

It looks like there will be more public hearings on media ownership restrictions. A Democrat on the Federal Communications Commission plans to hold two more hearings, sidestepping the wishes of the agency's Republican chairman.

Commissioner Michael Copps says he will hold hearings at the University of Washington in Seattle and Duke University in Durham, North Carolina. Copps is seeking public input on the F-C-C's review of whether decades-old media ownership restrictions are appropriate in a market altered by the growth of the Internet, satellite boadcasting and cable television.

FCC chairman Michael Powell had previously said that the hearing he held in Richmond, Virginia, on February 27th is all that's needed. Powell said that the agency has received 13 thousand comments from the public, most filed electronically. (FCC)

**

HAM RADIO CUDOS: PAUL HARVEY HONORS HAMS

Radio commentator Paul Harvey dchose Wednesday, March 19th to honor ham radio. In his broadcast, Harvey described radio amateurs as America's quiet warriors. He said that there are 700,000 of them who are unpaid, uncelebrated, civilian, radio operators, who are there during and after floods, fires and tornadoes. And says Harvey, after the 911 attack hams were indispensable in reuniting families.

It was a very unexpected salute to the nations ham radio community. You can find it on the web at www.paulharvey.com. Look for the show dated March 19th. (W6RCL)

**

CHANGING OF THE GUARD: MARC TONNA, F9FT, - SK

A pioneer in antenna design has passed on. According to a notice on thew A.F.T. antenna wwebsite, company founder Marc Tonna, F9FT died on March 2nd at the age of 91.

Way back in 1946, Marc Tonna revisited the design described by the Japanese searchers Yagi and Uda in 1926. Tonna brought to the Yagi improvements that made his antennas famous among the radio-amateurs, as well as in the field of the then uprising commercial TV. He later went on to become the co-founder of the company Antennes Tonna which today is known as A.F.T.. (AFT)

**

## NAMES IN THE NEWS: NEW ARKANSAS SM

Dennis Schaefer, W5RZ, has been appointed as the new Arkansas ARRL Section Manager. He succeeds Bob Ideker, WB5VUH, who first served as Section Manager from 1991 through 1995 and who returned to office in 2001.

And heres where it become rather uinteresting. Ideker had decided to not run for another term. Eldon Bryant, K7ZQR, was elected to replace him. But Bryant later decided not to assume the office and Schaefer was named as his replacement.

Schaefer’s term begins on April 1st. Arkansas ARRL members -- or anyone elser can contact him by e-mail to w5rz@arrl.org (ARRL)

## EMERGING TECHNOLOGY: CALL IT MC INTERNET

Hungry? You may soon get a surprising bonus when you dine at the Golden Arches. This, with word that McDonald's restaurants in three U.S. cities will be offering one hour of free high-speed Internet access to anyone who buys a promotional meal.

Ten McDonald's in Manhattan New York began offering wireless WiFi, or 802.11b, Internet access on Wednesday, Matrch 12th. By the end of 2003 McDonald's plans to extend the access to 300 restaurant locations in New York City, Chicago and a yet to be announced California city. Window signs will alert customers to which restaurants have WiFi wireless access. After using the hour of free access that comes with a meal, customers can pay $3 for another hour online or get more time by purchasing another extra value meal

Besides McDonald's, Internet surfers will also be able to tote their laptops to 400 U.S. Borders book stores, hundreds of hotels and a pair of U.S. airports where WiFi access will be available this summer.  (Published news reports)

**

SPACE AND SCIENCE:  MORE ON SETI@HOME

Last week Amater Radio Newsline's Henry Feinberg, K2SSQ, brought you the latest news on a project called seti@home.  Henry is back this week with some background on the project and how it got stasrted:

--

SETI@home first offered its screensaver to the world in May of 1999 as the first example of wide-scale distributed computing.  Its aim was to link idle computers through the Internet to tackle large computational problem involved in searching for intelligent signals from space.

The key to its success was the collaboration between two people who would become the principal architects of the project.  David Anderson is a computer scientist who was one of the principal developers of distributed computing. Dan Werthimer is a physicist with two decades of experience collecting radio data and parsing it in  search of unusual signals from space.  Together, they have drawn in not only the computer community, but many others as well.  This includes thousands of ham radio operators interested in offering use of their spare computer time to benefit worthwhile projects.

Werthimer, who serves as chief scientist for SETI@home has conducted his own Search for Extraterrestrial Intelligence for the past 24 years.  For 11 of those years he has been able to use the giant 1,000 foot diameter radiotelescope at Arecibo Puerto Rico to look again at promising locations and frequency ranges.  This, to determine if a strong radio signal is more than random noise or a transmission from an orbiting satellite.

So far no luck but Werthimer is not disappointed.  This is because SETI@home has mobilized so much more computing power than has ever before been thrown at signal analysis.  Also, the team has been able to perform much more detailed and complicated computations on the radio data than now possible with Werthimer's own ongoing SETI project, called Search for Extraterrestrial Radio Emissions from Nearby Developed Intelligent Populations.  Thats SERENDIP IV for short.

What is important is that SETI@home has performed the most sensitive and detailed SETI sky survey to date.  It has also demonstrated the power of the Internet for doing scientific distributed computing, and has allowed the general public -- and the ham radio communuity to participate directly in an exciting research project.

And the success of SETI@home has also spawned numerous other distributed computing projects.  These include Folding@home -- a distributed computing project to calculate the three-dimensional structure of proteins and climateprediction.net to improve scientific forecasts of 21st century climate. And scientists say that there is more to come.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

So far, 4,287,000-plus users have lent thir spare computing time to analyze radio data for the SETI@home team. You can become a part of the project by taking your web browser over to http://setiathome.ssl.berkeley.edu. And if you missed that U-R-L you will find it in the print edition of this weeks amateur Radio Newsline report. (W6RCL, Published Reports)

**

DX

In D-X, word that A35KB has gone QRT -- probably for good! Paul Kidd, A35RK, told the Ohio Penn D-X newsletter that he hasn't heard Father Kevin Burke, A35KB, on the air for some time. So, last week telephoned Father Kevin only to learn that he is very busy with his duties as parish priest on the Island of Eua. Because of this, he is no longer able to operate on the radio, has allowed his license to expire, his station is dismantled, he has no intention of getting back on the air any time soon. Nor can he any longer respond to QSL requests. (OPDX)

On a brighter note for D-X’ers, the OPDX also reports that SP9FIH will be active from Tonga through April 14th. He already has verbal permission to operate and his license will be given to him after arrival on the island. Activity will be SSB on 80 through 10 meters including the WARC Bands. QSL to P.O. Box 480, 44-100 Gliwice, Poland. (OPDX)

And lastly word that Meanguera Island in the Fonseca Gulf will ba activated by DL7IQ, DL7IO and YS1CF from march 27th to the 28th as HU1M. Modes used will be SSB, CW, SSTV and RTTY. On the 29th and 30th the same call letters will be from San Diego Beach El Salvador. Full information is on the web at www.dl7io.de. (The’ Modern DX’er)

**

THAT FINAL ITEM: SWLFEST 2003

And finally this week, hams are not the only radio hobbiests who get together at conventions. Shortwave listeners recently had a major get-together in Pennsylvania that saw guests and presenters from around the world. Steve Coletti of WBCQ was among them and has this in-depth report on SWL Winterfest 2003:

--

The listening side of the radio hobby made its 16th pilgrimage through the snow to the little town of Kulpsville, PA., for the annual SWL Winterfest hosted by NASWA. Although SWL stands for short wave listeners, the fest activities cover DC to daylight as again there were the usual demonstrations of overseas TV via satellite, the activities of the group who we affectionately call the "Scanner Scum", and a demonstration of DRM, the European digital shortwave broadcast standard by Jan Peter Werkman of Radio Netherlands, James Briggs of Merlin Communications and Kim Elliot, KD9XB, of the Voice Of America with additional help of a PC loaned by attendee Eric Cottrell, WB1HBU, to decode the broadcasts beamed specifically to Kulpsville.

This year, Bill Whitacre of the International Broadcast Bureau, parent of the VOA and other US international broadcast ventures, was able to schedule it's annual meeting of radio monitors to coincide with the Winerfest and 26 professional listeners from around the world joined the crowd in Kulpsville to explain that their job was more than just making sure that the signal was heard in the target area.

Although the Fest has been a listener only event, over one third of the attendees every year are hams and this year new ground was broken as Skip Arey, N2EI, ran an introduction to Ham Radio forum.  Not only the first time for this discussion, but it was also one of two first time evening forums held on Friday night.

The international broadcasters were represented this year by Adventist World Radio and Radio Free Asia in the forums as well as live broadcasts over WBCQ. In addition to some regularly scheduled programming that went remote on Friday night, WBCQ had a Saturday marathon broadcast by the station's engineering magician, "Tim Tron" Smith, WA1HLR.

Other forums featured reports on listening tips, a summation of a DXpedition to Australia, and a report on overseas SWL group, the European DX Council's annual meeting.

Last year, Bob Zenotti, HB9ASQ, co-host of the now gone Shortwave Merry-Go-Round on Swiss Radio International made his first appearance at the fest as a guest speaker.  This year he came on his own as regular attendee.

--

Zenotti: “This is one of the best ones I can remember.  Great bunch of people, fantastic discussions, and a lot of excitement here….and very little sleep.”

--

The fest was not without it's humor.  The hotel has the Stockholm, Copenhagen, and Oslo meeting rooms.  In honor of the delegation from Finland that attends every year, the hosts of the event, Richard Cuff and John Figliosi, unofficially named the fest's hospitality suite, the Helsinki room.

For the Amateur Radio Newsline, I’m Steve Colletti a-k-a Big Steve Cole of WBCQ Radio reporting fot the Amateur Radio Newsline.
--

The 2004 S-W-L Winterfest is slated a year vfrom now on March 12th to the 13th at the same venue.  You will find lots more about it on the web at www.swlfest.com.  (Strve Coletti for ARNewsline™)

I picked up a Gates m-6095 exciter the other day and have some questions about it. Its a mono tube unit from the 60's with 10 watt is all of the information I've been able to find on the internet. It has 12 screw terminals on the back, I cannot figure out what their functions are, I could trace for power but figuring out audio and possible remote power on would be hard & time consuming. On the front it has a switch labled mod 1, both, mod2, from what I gather this unit runs two modulators at once and compares their results when in the both position ? There is also a 1/4" jack on the from which maybe is for the audio ? Does it have built in preemphasis or must that be provided externaly ? And how hard/easy is it to recrystal it? If somebody has a manual that would be great too, I found on on a webpage but they want like 80 bucks for it.

Thanks, John

Hope this is helpful - haven't been in the radio game in a while so excuse my lay terminology.

Currently KIEV is an 870 AM station (licensed I think to Glendale?). I don't believe it's a 50kw. Current format is talk with some slots for folks who buy airtime and produce their own shows (I forget what this is called - not timeshare - wow it has been a long time.

My guess is if this pans out, KIEV would move to 1500 and then would sell the 870 freq to someone else...

This would replace the old KROQ-AM on 1500 from Burbank, which went dark around 1984. (Anybody know why KROQ-AM went dark?)
>>

IIRC, Geo. Cameron Communications itself went dark.

Then co-owned KROQ-FM, Pasadena, is currently owned by Infinity, and one of the original KBLA/KBBQ/KROQ/1500 towers is being used as an auxiliary for the FM incarnation of that station.

The original 1500 AM site (and present FM site) can be seen at ...

<http://www.topozone.com/map.asp?z=11&n=3784453&e=384060&s=25&size=l&u=2>

This station was originally on 1490, in a somewhat similar way (although MUCH more poorly engineered) as was WLQV/1500, Detroit.

>>
Anyone think this will get on the air?
>>

The best site is from ex-KRLA/1110's site ... but that will never happen now as ABC has apparently made a diplex agreement with KRLA/870.

My guess is what with Royce's problems with another of its stations, the likelihood of 1500 returning anytime soon is low.

For sale:

The "Radio Crazy" is back!

Partial ownership (Joint venture) in fulltime AM station in Quitman, GA. WSFB. 1490 KHz. On the air since 1955. Brooks county. Only AM in that county. Near Valdosta, GA.

Full price is $75,000. NO real estate is included. You heard it first here, kiddies! The rent for the combined studio/xmtr site is $400.00 a month.

Active or inactive (But not inept! HI!) investors with at least $10,000 are welcome. All investors would be on the board with full voting rights if desired. Please! No "AM bashers" or "negative nabobs" I suppose if you fit into that category you would not be answering anyway!

This is a nice little "Mom and Pop" type AM in small community. There are 900 historic register buildings in this community! One of the largest collections in the state!

The "Radio Crazy" is NOT THAT crazy! My last job in radio (2001) was Chief Engineer for a 5 KW fulltime AM in New York City. This market is somewhat (?) larger than Quitman, GA. (???)

Tel: (478)741-1710 or email.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy" aka "Meyer, da animal".

I guess I didn't make my point clearly enough. The broadcaster is not PART of the game, he is there to report it. When he gets thrown out for interfering, he MADE the news, rather than reporting it. I happen to love Jim Rome. I think he's the best sports-talk guy to ever hit the airwaves. The problem is that most that attempt to be, ARE NOT Jim Rome. He does a niche type show, and is damn good at it. The "clones" out there (not in the listener sense, but the on-air clones) try to interject talk-show style into their PBP, and it sucks.

Report the story, don't make it. That's my only point.

Rick

My undertanding was that 1500 went dark for two reasons: licencee problems
with FCC and inability to make money.
>
> This new CP for 1500 says it would be 50 kw days and 7.1 kw nights
> from xmtr site off the Pomona Freeway between Monterey Park and

Not zoned yet. NIMBY.

> Any new details would be appreciated...Anyone think this will get on
> the air??

> Hard to believe a new stand-alone AM in L.A. could make it.

It is hard to envision an AM in LA that did not make money. There are far more buyers than sellers. 1500, if it gets zoned and built, will have a perfect signal for many of the Asian communities in LA; there are more potential buyers of block time than there are stations. There are $920 million dollars in ad revenue in LA. There is always something left for the small, bottom feeding stations.

Remember, Sol Levine sold the 1650 Costa Mesa X-band station for $35 million... and it is Korean... with 10 kw days and 1 kw night.

For the coax, try www.cablexperts.com . Amidon and Palomar would have cores, but I don't know what the exact urls are. If nobody else comes up with it, I can find out about the teflon coax.

It's been a while since I've heard anything on which radio property Infinity will sell in the Los Angeles market.  I know they currently own

```
  93.1 KCBS Arrow 93
  94.7 KTWV The Wave
  97.1 KLSX Hot Talk
101.1 KRTH Oldies
106.7 KROQ Alternative
   980 KFWB 24H News
1070 KNX News plus
```

As CBS owns both KCBS 2 & KCAL 9 I believe they need to sell a radio station.  Who is on the chopping block?

Discuss.

KFWB. They already tried to put it in a blind trust pending the current FCC
review of ownership requirements.

980 is the only signal that does not rally cover the bulk of the population
centers of LA MSA day and night.

That's sort of old information...since then, the station at 870
adopted the historic L.A. calls KRLA (ex-1110).  Though I believe it
still does sell some brokered slots, it's mainly the Los Angeles
outlet for Salem's syndicated conservative non-religious talkers
(including L.A.'s own Dennis Prager...it's his flagship station now
after leaving KABC/790).  They do have a local morning show with
former KCBQ/San Diego GM and talk host Mark Larson and local radio guy
Mark Marino...the show is simulcast on KCBQ and KRLH/590 in the
Riverside/San Bernardino market.

It is now owned by Salem.

>My guess is if this pans out, KIEV would move to 1500 and then would
>sell the 870 freq to someone else...

Unlikely, considering the above events.

Mike

It was quite interesting to hear to some EAMs and SKYKING messages on the Global HF freqs that might be "for real".  Of course, it was also a little worrisome that some of the youngsters reading those messages got the giggles half way through or felt obligated to bring out the DJ in themselves and punch up the delivery just a little bit.

The old Iron Eagle must be doing the B-52 equivalent of barrel rolls in his grave right now.

870 in Glendale is licesnsed to the call letters KRLA, and has been for
about a year.
>
> My guess is if this pans out, KIEV would move to 1500 and then would

870 is owned by major grouo broadcaster Salem. It is not moving anywhere.
Especially 1500.

True ... but KRLA/870 is supposed to be moving in with ex-KRLA, KSPN/1110.

However, now KPSN and KDIS/710 are supposed to be swapping frequencies.

And, it was KIEV/1500, in an earlier incarnation, also owned by Royce, which
was supposed to be moving in with 710.

KROQ is the highest billing of all the infinity stations; it is the third or fourth highest billing station in the entire USA. That is the last one they will sell. The least profitable is probably KCBS right now.

Anyway, they already announced that the wanted to put KFWB in a blind trust pending the outcome of the FCC investigation into cross ownership. The FCC said no... so they are looking for another plan.

That seems to be true. If it gets built.
>
> However, now KPSN and KDIS/710 are supposed to be swapping frequencies.

They did at the beginning of the year. Has to do with night coverage for
KSPN's Angels Broadcasts. 710 goes deeper at night into Orange County.
>
> And, it was KIEV/1500, in an earlier incarnation, also owned by Royce,

That was when it was a CP for Burbank or Tujunga or somesuch. It has now
moved to Culver City as COL, making a San Gabriel Valley site essential.

Old news.

Radio Disney LA is now on 1110 and ESPN Radio LA is now on AM
71.

This happened months ago.

They should do what Clear Channel does: sell it to a company that will
be happy to sell it back if the possibility arises. In the meantime,
they can pay the new owner to continue to be allowed to provide whatever
programming they deem appropriate (with duly executed network agreements
of course).

Yea, it was funny when KROQ's PD went to New York's WXRK and created a KROQ
clone.  They even go by the name K-ROCK, whatever that means.

if you are not a broker or agent or owner...then why are you posting all of these station for sale? what do you get out of it???? maybe you are just friends with hundreds of people selling AM's. you hve posted at least 100 stations for sale. as I have said before....why would I fund your semi-retirement by throwing good money after bad AM's so you can get your cut and scram.
you need not respond, I know what you are...just making sure the others in here do to. just like Nixon...telling us you are not a crook...dont change the facts. have a nice day.

Agreed, KROQ concerts sell out in minutes.  I'd suggest a frequency switch
for KROQ as 106.7 is a weak signal compared to 93.1, 94.7 or 101.1 but there
is the frequency recognition working against that plan.

I've been a KROQ listener since '81, makes me happy my favorite station is a
mighty one.

Not sure that's an absolute.  Transfer the callsign to the LA 1070
(as the TV station has), and flog it off to... um... Entercom?  Hispanic?
  Heh... Wouldn't Dave Stewart love to have that one to take care of...

Would it be eligible to reclaim the "KQW" callsign?

Dear Gregg:

I don't mind responding re: AM in GA. I am (repeat!) not a broker, agent, etc.

I am simply trying to buy an AM station and elicit some help. Is there anything dishonorable about that.

I concede AM is a "hard sell" but I do resent the perception that you somehow believe I am less than honest. I was a civilian employee in 1972 with the US Dept. of Defense and has access to the Post Commander of the entire 6th Army. (A General). Do you really think they'd grant a SECRET level security clearance to a crook! It took the FBI six weeks of background checks before I got the clearance!

I have NOT posted 100 stations but I will admit I have reposted the same stations several times.

Why this would somehow bother you is a puzzle to me. I
have not taken a dime from anyone in this forum.

Cordially,

Meyer Gottesman

A number of "legacy" Infinity stations, including the very first one, were cut loose for the merger with CBS. Believe me, if a station doesn't fit the program, it will be gone in an instant. There is no sentimentality in radio acquisitions these days. Sure, if there is history in a station, then promote it. But other than that it has no value.

Interestingly, the CP no longer appears on the FCC website. Nor does the KLAC one, either.
>>

The one for 50 kW (days) into 1110's towers is still there, but the one for 50 kW (nights) into 1110's towers is gone.

At least in the "snapshot" of the database which I examined.

Kind of doubtful. KFWB is no billing slouch, doing around $30 million last year. Now, with the LA Dodgers, they will probably put even more bucks on the books.

We were even considering  using "sentimentality" and "Mel" in the same
sentence?

After WJW-AM 850 was sold off to a different owner, WJW-TV 8 here
became WJKW-TV for several years. When WJW-AM changed calls to
WRMR-AM, WJKW was allowed to return to its original calls. Channel 8
remains WJW to this day, through a number of ownership changes and an
affiliation flip from CBS to Fox.

Don't know if it's happened anywhere else.

Who says there not any news in AM radio?
Thanks Mike for the corrections.

I am so "sick" of reading Meyer's advertisements of junky AM stations
for sale.
Does he really think we are that stupid?
Hey, the man may not be a crook, but I remember getting a resume from
him waaaay back and it was soooooo weird!!!
Even the titles turn my stomach since I don't actually read the posts
anymore.
Does anyone in the group find these postings useful?
Maybe I am wrong. Prove that this is a useful expenditure of
bandwidth.
Will MeyerFans please speak up?

Would it be eligible to reclaim the "KQW" callsign?
>>

Not a chance.

*That* KQW was on 1010, and was licensed to San Jose.

So, there isn't even a frequency or a COL connection.

The "KHJ rule" (i.e., "KK" calls being somehow confused with the Spanish word for "feces") couldn't be applied, and other than that, no three-letter calls are permitted to be issued.

I seriously doubt if WFIL could get back it's old WFI call.

I don't think they're a big deal, not that I'm actually in a position
to buy radio stations. If we can come to a consensus about whether or
not he should post them, I'll adjust the posting rules accordingly.

I will respond this one time...

First: having a security clearance 30 years ago means nothing now....besides you are the one telling us you had it. A crook WOULD lie about that!

Second: Nowhere in your posts do you state that you are puting your own money into these ventures. So i assume you are getting others to invest so that you get a free ride if you get enough investors.

Third: If you are offering these stations for sale...that DOES make you an agent of sorts.

Fourth: I do believe you are close to 100 stations, but i don't keep track. You must have a great retirement package if you can invest in that many stations...even if it's only half or one quarter of that number. Being able to invest in 25 stations is pretty impressive. This goes to #2 and my assertion that you are funding your retirement by getting others to invest for you.... that would in fact make you a broker then. And a scumbag!

Lastly: I think you are posting in the wrong group! Many of the people that come to this newsgroup are naive about radio and don't have much money and can be sucked into a deal where they lose it all and you end up with that station. You should use a real broker.

I will always point out things that dont make sense and keep people from flushing their life savings down the toilet so you can play radio.

I won't stand by and watch this "harmless" old coot fleese my fellow man.

>Joe McCarthy had the solution.  No censorship, just an invitation to appear at the highly publicized un-American Activities Committee hearings. A number of people found other lines of employment.<

Yeah, that's probably why McCarthy died a penniless drunk, in disgrace and censured by his colleagues, who had finally had enough of his violations of rights guaranteed by the Constitution.

And before 27 people jump down my throat, comparing McCarthy to Bush is like comparing apples to vacuum cleaners.

The .1% who react create an entertainment for the 99.9% who listen, just like talk shows.  Even your reaction is part of the entertainment.  All bases are covered in advance in this story.  DJ's pile on to be part of the story.
It's better than dropping turkeys.

The trick is to find stories that have legs, which is mostly trite stereotypical stuff.

The test of a sense of humor for the Dixie Chicks is to make a country song out of it, dog died, truck broke down, unfaithful boyfriend, and career blows up at the hands of your moron audience.

Country music programmers are under tremendous pressure from angry listeners upset with the Chicks.  The outpouring is really overwhelming -- to the point that it cannot be ignored.

Whether or not the appropriate response is a ban, can be debated.  But some response is required.  What Natalie Maines said was extremely offensive to the Chicks' core audience.

The station I work for is NOT one of the country stations that has tried to make hay out of this by pulling stupid stunts like bulldozing piles of Dixie Chicks CD's.  We've tried to play it even-handedly and relatively low-key, and keep the on-air discussions relatively civil. We are owned by an artist and we treat artists with respect.  Still, our e-mails and calls are running overwhelmingly in favor of banning the Chicks from the air, and the volume is unprecedented.  We're hearing -- loud and clear -- that most of our folks don't want to hear the Dixie Chicks on the radio any more -- certainly not now, although attitudes may mellow over time. But the apology Natalie Maines released made things worse because it sounds like it was written by a lawyer.

It's really rather sad. This could be serious career damage for these very talented young women. And many of the victims in this are people like songwriters, radio stations, retailers and concert promoters who had nothing to do with the remark about Bush, but are likely to take some sort of economic hit for it anyway. But that's free enterprise.

Disclaimer -- I have no role whatsoever in deciding what music our station plays or doesn't play -- that's somebody else's job. I'm just explaining what we and other country stations are facing.

Mark Howell

Freedom includes a radio station's right to play or not play songs as they choose.  We as indivduals have the right to censor whomever we want, government does not.

Umm...The radio stations have a right to program what they feel their audiences want.  THAT is what America is about.  If you want to enjoy their songs, you can switch stations, or heaven forbid, go to Wal-Mart and buy their CD's.

Perhaps, but notice *your* post is the first to have done so ;-) .

OK, so which performers can we think of who stuck their foot in it on a political matter and lost airplay as a result?   Two that come to my mind are Sinead O'Connor and Holly Dunn.  Those careers didn't really bounce back, but they were nowhere near Dixie Chick level anyway.

I have yet to forgive the Chicks for Goodbye Earl, a song which celebrated two women who murder someone for his crime after they've determined that going through legal process would be too risky or cumbersome.

That's a different story, entirely. When an overwhelming response from
listeners says we don't want to hear them, a station has to take note.

>The station I work for is NOT one of the country stations that has
>tried to make hay out of this by pulling stupid stunts like bulldozing

>relatively low-key, and keep the on-air discussions relatively civil.

That's a station I'd listen to because it responds and acts
thoughtfully and I can believe what it does is perceived to be either
in my best interest or responding to the will of its audience when
that will becomes obvious.

Hmm. I've been telling people that for years, though I believe
censoring personalities and artists for their opinions violates the
spirit of the First Amendment. If it's driven by listener response,
that's one thing. If it's a corporate decision designed to feed on
controversy the corporation no longer has a legitimate standing to
protest any attempt by the government to do the same thing.

This is silly, Rich. The First Amendment assures speech is free only from government censorship. Companies and individuals are free to censor themselves, which is what happened here. That's a free market at work.

# GELLER MEDIA INTERNATIONAL NEWSLETTER
SPRING 2003=20

## KEEPING IT POWERFUL

### DO YOUR SHOW ON THE AIR, NOT IN THE HALL!
It happened again last week.  I'm standing in the hallway of a station,=20
overhearing a morning team talking, laughing, enjoying themselves,, and=20
having fun.  THEN moments later,  ON THE RADIO I am absolutely BAFFLED at=20
what happens -- They turn on the microphone...and the genuine stuff that was=
=20
going on in the hallway STOPS...

And NOW, "RADIO PRESENTING" BEGINS.  OK, while they do sound slick, well=20
produced and very professional, employing excellent skill and training on=20
air, something is missing. It's fake.  Manufactured.  They are employing=20
craft, not art.  =20

What happened to that real feeling, moments ago, of real people just being=20
together?  Talking, laughing. Issues of the day, being genuine, EXPERIENCING=
=20
REAL LIFE.  That thing I just heard you do two minutes ago in the HALL. =20

All great presenters on air elicit the same response in the audience. =20
Listeners say: "Although we've never met, I feel like I know this person whe=
n=20
I hear him/her on the air..."  The audience feels that they could go out and=
=20
have a meal at this person's home and feel totally comfortable with him or=20
her.  A total stranger, but someone they feel  they know, someone on air who=
=20
has allowed the audience "in." =20

Telling the truth, a key element in powerful radio, also translates into=20
being genuine and authentic on the air.  That is what powerful radio is=20
about.  It works when it is real...Not these fake plastic conversations, tha=
t=20
sound manufactured, or forced to fill the time, but rather people who=20
communicate and make you feel like you know them, and that they'd have this=20
conversation ON or OFF the radio.  That's when a show is in REAL power...and=
=20
it's so rare.   =20

The closer it is to real life, a conversation around the breakfast table or=20
in the car between friends, and the less it sounds like: "and now, another=20
topic manufactured for your Radio Listening on My Radio Show..." the more=20
powerful it is.

Listeners come to radio for lots of reasons, they want to be entertained,=20
informed, inspired, and connected to other people.  In these times with talk=
=20
of war, terrorism and fear looming, what people are concerned and talking=20
about outside the on air booth is powerful and real and some of that should=20

be coming through the airwaves as well.=20

So, at the risk of hammering home what you already know... it's time to=20
remember some of the basics:

1) Talk to ONE PERSON.  Not "all those listeners out there in radioland..."=20=
=20
NOTE: If you are part of a team show...put an extra chair at the console or=20
table...that's your listener. Now genuinely include and involve that=20
listener.

2) Who are you?  Do we know you from your show?  Show Prep from your life. =20
Use your own experiences, things you've overheard, observed, or have had=20
happen to you or someone you know.  Don't depend on guests or show prep=20
services or become completely dependent on the newspaper. =20

Audiences can get information from many places now.  The only thing they=20
cannot get elsewhere is YOU.  If you do something that offers authentic self=
=20
revelation each show and allow the audience to get to know who you are, it=20
works.  (Remember though, it's never about YOU, it's always about the=20
listener, but the personal is universal and if you focus the topic in an=20
engaging way, using your truth and the power of storytelling, it will work.)

SUGGESTION: Try talking about things on the radio because you care about=20
them, things you'd talk about anyway, even if you did NOT have a radio show.=
 =20
Do not feel obligated  to talk about things just because they are in the=20
front of the newspaper.  If you genuinely care about a topic, have thought i=
t=20
through and have a real opinion or position on it, it will work better.  Whe=
n=20
in doubt, leave it out.

3) Use visuals.  Describe details.  I just heard American newsman and=20
commentator Paul Harvey talk about the R&R Talk conference he'd attended in=20
Los Angeles.  At the very end, he not only gratefully acknowledged the=20
organizers for inviting him to Los Angeles and presenting him with an award,=
=20
but he also thanked them for giving him a "romantic weekend" at a hotel with=
=20
his wife of some 50 years, a room overlooking the ocean -- his words: "Thank=
=20
you for the Polynesian moonlight through a venetian blind... "

If you can give your listener a movie in the mind..it will always work.  Use=
=20
the language to create pictures...it is powerful.

4) Finally, relax.  If you relax, the natural moments of humour will come. =20
If  a performance is too tight, or formatted, or rehearsed or if you are=20
nervous, it will never work as well.  When you make a listener laugh, it's=20

like handing him or her a chunk of solid gold... and our research shows if=20
you make them laugh, often you 'buy" more  time spent listening to you...in=20
hopes you'll make them laugh again!

NAB/RTNDA
If you are planning to be in Las Vegas next month to attend the NAB/RTNDA,=20
please find me and say hello...I will be hosting a panel on April 7th at 2:1=
5=20
PM in the Hilton, on Powerful AIrchecking Techniques. =20

PRODUCER'S WORKSHOP 2003 set for October 11, 2003

SAVE THE DATEl Come if you can.  Mark the date for the 2003 10th Annual=20
Geller Media International Producer's Workshop!  This unique one day seminar=
=20
is geared for managers, programmers, on air talent and producers! =20
It takes place on Saturday, October 11th, 2003 at the Cornell Club in New=20
York.  You must pre-register and can do so from the website =20

<HTML><FONT FACE=3Darial,helvetica><FONT  SIZE=3D2><B>GELLER MEDIA INTERNATI=
ONAL NEWSLETTER<BR>
SPRING 2003 </B><BR>
<BR>
KEEPING IT POWERFUL<BR>
<BR>
<B>DO YOUR SHOW ON THE AIR, NOT IN THE HALL!<BR>
</B>It happened again last week.&nbsp; I'm standing in the hallway of a stat=
ion, overhearing a morning team talking, laughing, enjoying themselves,, and=
 having fun.&nbsp; THEN moments later,&nbsp; ON THE RADIO I am absolutely BA=
FFLED at what happens -- They turn on the microphone...and the genuine stuff=
 that was going on in the hallway STOPS...<BR>
```

```
<BR>
And NOW, "RADIO PRESENTING" BEGINS.&nbsp; OK, while they do sound slick, wel=
l produced and very professional, employing excellent skill and training on=20=
air, something is missing. It's fake.&nbsp; Manufactured.&nbsp; They are emp=
loying craft, not art.&nbsp;&nbsp; <BR>
<BR>
What happened to that real feeling, moments ago, of real people just being t=
ogether?&nbsp; Talking, laughing. Issues of the day, being genuine, EXPERIEN=
CING REAL LIFE.&nbsp; That thing I just heard you do two minutes ago in the=20=
HALL.&nbsp; <BR>
<BR>
All great presenters on air elicit the same response in the audience.&nbsp;=20=
Listeners say: <I>"Although we've never met, I feel like I know this person=20=
when I hear him/her on the air..."&nbsp;</I> The audience feels that they co=
uld go out and have a meal at this person's home and feel totally comfortabl=
e with him or her.&nbsp; A total stranger, but someone they <I>feel</I>&nbsp=
; they know, someone on air who has allowed the audience "in."&nbsp; <BR>
<BR>
Telling the truth, a key element in powerful radio, also translates into bei=
ng genuine and authentic on the air.&nbsp; That is what powerful radio is ab=
out.&nbsp; It works when it is real...Not these fake plastic conversations,=20=
that sound manufactured, or forced to fill the time, but rather people who c=
ommunicate and make you feel like you know them, and that they'd have this c=
onversation ON or OFF the radio.&nbsp; That's when a show is in REAL power..=
.and it's so rare.&nbsp;&nbsp;&nbsp; <BR>
<BR>
The closer it is to real life, a conversation around the breakfast table or=20=
in the car between friends, and the less it sounds like: "and now, another t=
opic manufactured for your Radio Listening on My Radio Show..." the more pow=
erful it is.<BR>
<BR>
Listeners come to radio for lots of reasons, they want to be entertained, in=
formed, inspired, and connected to other people.&nbsp; In these times with t=
alk of war, terrorism and fear looming, what people are concerned and talkin=
g about outside the on air booth is powerful and real and some of that shoul=
d be coming through the airwaves as well. <BR>
<BR>
So, at the risk of hammering home what you already know... it's time to reme=
mber some of the basics:<BR>
<BR>
1) Talk to ONE PERSON.&nbsp; Not "all those listeners out there in radioland=
..."&nbsp; NOTE: If you are part of a team show...put an extra chair at the=20=
console or table...that's your listener. Now genuinely include and involve t=
hat listener.<BR>
<BR>
2) Who are you?&nbsp; Do we know you from your show?&nbsp; Show Prep from yo=
ur life.&nbsp; Use your own experiences, things you've overheard, observed,=20=
or have had happen to you or someone you know.&nbsp; Don't depend on guests=20=
or show prep services or become completely dependent on the newspaper.&nbsp;=
 <BR>
<BR>
Audiences can get information from many places now.&nbsp; The only thing the=
y cannot get elsewhere is YOU.&nbsp; If you do something that offers authent=
ic self revelation each show and allow the audience to get to know who you a=
re, it works.&nbsp; (Remember though, it's never about YOU, it's always abou=
t the listener, but the personal is universal and if you focus the topic in=20=
an engaging way, using your truth and the power of storytelling, it will wor=
k.)<BR>
<BR>
SUGGESTION: Try talking about things on the radio because you care about the=
m, things you'd talk about anyway, even if you did NOT have a radio show.&nb=
sp; Do not feel obligated&nbsp; to talk about things just because they are i=
n the front of the newspaper.&nbsp; If you genuinely care about a topic, hav=
e thought it through and have a real opinion or position on it, it will work=
 better.&nbsp; When in doubt, leave it out.<BR>
<BR>
3) Use visuals.&nbsp; Describe details.&nbsp; I just heard American newsman=20=
and commentator Paul Harvey talk about the R&amp;R Talk conference he'd atte=
nded in Los Angeles.&nbsp; At the very end, he not only gratefully acknowled=
ged the organizers for inviting him to Los Angeles and presenting him with a=
n award, but he also thanked them for giving him a "romantic weekend" at a h=
otel with his wife of some 50 years, a room overlooking the ocean -- his wor=
ds: "Thank you for the Polynesian moonlight through a venetian blind... "<BR=
>
<BR>
If you can give your listener a movie in the mind..it will always work.&nbsp=
; Use the language to create pictures...it is powerful.<BR>
<BR>
<BR>
4) Finally, relax.&nbsp; If you relax, the natural moments of humour will co=
me.&nbsp; If&nbsp; a performance is too tight, or formatted, or rehearsed or=
 if you are nervous, it will never work as well.&nbsp; When you make a liste=
ner laugh, it's like handing him or her a chunk of solid gold... and our res=
earch shows if you make them laugh, often you 'buy" more&nbsp; time spent li=
stening to you...in hopes you'll make them laugh again!<B><BR>
<BR>
<BR>
NAB/RTNDA</B><BR>
If you are planning to be in Las Vegas next month to attend the NAB/RTNDA, p=
lease find me and say hello...I will be hosting a panel on April 7th at 2:15=
 PM in the Hilton, on <B><I>Powerful AIrchecking Techniques.&nbsp; <BR>
</B></I><BR>
<BR>

I just updated my Iraq War information pages at www.MilAirComms.com
This includes military frequencies and SWL freqs and schedules.

Just copies KOL Israel�s news broadcast at 1730 UTC on 17545 (excellent signal into Daytona Beach, FL). KOL Israel is reporting that they feel very strong that the war will begin VERY shortly after the 8 PM EST deadline.  They feel strong that the war will begin in the early morning hours (local Israel time) as well as they have a strong feeling that Iraq will launch an attack on Israel in the early morning hours as well.

I�m sure the next few days/weeks are going to be busy on the airwaves�..

George

Except that the First Amendment defines what the government may do, not what corporations or private individuals may do. There is no provision to micro-manage corporate motives in the Bill of Rights.

Not even!

Modern day rap is mostly one guy spouting psychopathic gibberish over a mis-matched drum machine.  Listen to someone like 50-cent or any of these new people and you'll see what I mean.

You don't have the days of an MC and a deejay in the background spinning and sampling beats anymore where the MC would rap in time to the beats pumped by the deejay.

Guess they don't want to pay royalties on the loops they sample.....cheap bastards.

There's no hook!

Remember k.d.lang? She was actually starting to be accepted in the country western world, even though she was gay....

Then she got onto a vocal anti-meat-eating platform ("Meat Stinks", etc.) which made all the cattle ranchers angry. Suddenly, she wasn't being played on too many C&W stations anymore....

I would have thought Natalie Maines of all people would know that ideas and opinions are much easier to take in song than spoken.  I'm surprised she didn't express them that way in the first place.  Then we wouldn't be discussing this silly behavior by ABC.

I've been telling Talk Show hosts this for years when they complained
that their First Amendment rights were being violated - that they were

being censored by management. While the "official" prohibition is on the government, I think most Americans see the spirit of it as much broader.

Are we willing to ban every artist who says or sings something we don't like? Sounds like the death of Hip Hop. What would happen if Eminem or 50Cent had done the same thing? How many stations would stop playing them and how many listeners would complain to either force stations to drop them or object to banning them? My guess is that Hip Hop listeners would object to banning. They're used to artists speaking their minds.

Is there more free speech in Hip Hop than in Country?

It'll be interesting to watch how many Hip Hop artists release songs commenting on the war and how many of them get banned. I'll bet there are artists all over this country recording such songs as we type.

Rich

[ Moderator's note: Wasn't sure whether or not to post this. Might be relevant in light of the Dixie Chicks thread! ]

We are a concerned citizens group and we are asking you to Boycott a California hiphop

group with a CD called "OUT THA TRUNK" because we feel their lyrics have gone too

far.They have a huge web following but I wont mention

the web site because I don\'t want to draw it any attention. We were sucessful from getting

OUT THA TRUNK removed from the shelves of the

Warehouse Chain. Also because of me the

FYE chain is not accepting the CD. We are trying to get the CD off the shelves at the

Rasputin Chain but have been uncessful. However they

have a huge presence on the Internet and we need your help driving them off the net, and

are asking you not to patronize them or buy their CD.

We will not give you their home site but some of the other sites link to their site and we can

help that. OUT THA TRUNK is on the following sites:

Below are the sites that we would like you to complain to about the CD but more importantly

please write the

two major hiphop radio stations that OUT THA TRUNK is submitted to for rotation in the US

:

106Kmel

(write: bigvonjohnson@clearchannel.com or jamesarcher@clearchannel.com) and Hot97

(write: hot97@hot97.com) Write in Subject field "Dont Play OUT THA TRUNK" if they

get

enough of these letters they will not

add to rotations and all the other Stations will follow suit.Remember these stations

broadcast

worldwide on the

internet also. Also please write or call you local station.

Also Boycott these sites

1. http://www.newmusic.clearchannel.com/artist/SanFranciscoHipHop.com

2. http://www.artists.mp3s.com/artists/371/out_the_trunk.html

3.www.AMAZON.com

www.CDBaby.com www.CDNow.com (if you go to

these sites and keyword

OUT THA TRUNK) those are top sites they are on but they

are on a lot more sites they we are boycotting.Also please write the sites and express your

displeasure with the CD and ask that they remove it.

Please help us even if you like hiphop because it will help hiphop as a whole in the end.

Thank You

Sorry if you dont share our enthusiasm and we will try to make this a one time mailing. If

there is a mistake and we mail twice plese put remove in subject window

For sale:

(The Radio Crazy is back!!)

Partial ownership of 1 KW fulltime AM radio station in Quitman, GA. Brooks county. Near Valdosta, GA.

Joint venture. WSFB, 1490 KHz, 1 KW. On the air since 1955. The only AM in Brooks county. Nice area. 900 historic register buildings in Quitman!

Asking price is $75,000. NO real estate is included. Studios and transmitter under one roof. Leased at $400.00 per month.

Active or inactive investors with at least $10,000 each are welcome. You must be a US citizen with no felony convictions. (FCC policy).

The "Radio Crazy" is not THAT crazy! Hi! He is a semi-retired broadcast engineer. Last job in radio was Chief Engineer for a 5 KW AM in NYC. The "Radio Crazy" lives in Macon, GA. Ham since 1950. (W6GIV, Advanced class). Age is 67. Active and healthy.

Tel: (478)741-1710.

PLEASE! No "AM bashers" or other "negative nabobs" (Yes, I don't know what the hell a "nabob" is either but it ain't no compliment! HI!)

More details only to those who properly identify themselves. That means your REAL name and tel. number at the very least and your word of honor that you will (a) Not contact the station directly and (b) That you have available IMMEDIATELY at least $10,000.

All investors would be on the board with full voting rights if desired. No single investor may own more than 49 percent and this goes for me too!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
Macon, GA

wrote:

>Is there more free speech in Hip Hop than in Country?

My guess is that speech is more free in the Hip Hop format. Of course, that's no indication of the quality of the speech itself. Clearly the Hip Hop listeners are used to the obnoxious or stupid behavior and don't mind wading through it for the occasional kernel of truth.

Although I don't listen to that format regularly, and I find it hard to take at times, I have to give credit where it's due.

Each of us will tolerate various indignities and ugliness so that we can celebrate the arts in all its forms. Anyone who decides to filter their artists by political persuasions before sampling their creations would be facing a very bleak life.

Only when an artist becomes obviously and deliberately disgusting, obnoxious, and rude, do I sit up and take notice. Naturally, like pornography, I know it when I see it. IMHO, while the Dixie Chicks may be treading closer to the fringe of what their audience will approve of, they're barely even in the same league as the Hip Hop crowd.

In this scheme of things, I think ABC is over-reacting. I'd leave it up to the Program Director of each station to decide for themselves.

Interesting.  We are supposedly fighting a war to protect freedoms (such as freedom of expression).  Yet for those who use that freedom in a way that displeases us, we advocate censorship.  That inconsistency appears to bother no one--least of all those in the media industry.

The concept that private enterprise should be exempt from the important task of preserving such social guarantees also appears to be more than just a little self-serving.

And we wonder why some in the wider world have come to the conclusion that the American Constitution is just a collection of empty words.

John Figliozzi

At least one station is looking at the subject correctly as reported in the Thursday (3/20/03) Detroit Free Press. Quote:

LET FREEDOM SING: Maureen Lesourd, vice-president and general manager of Detroit's dominant country station WYCD-FM (99.5), says, "We are obviously mindful that many of our listeners might disagree" with Dixie Chicks' Natalie Mains' London stage slagging of President George W. Bush. "But it's not a song content issue; it's a comment by a free American who is free to speak her mind." So the Chicks stay on 99.5. "We're really a music station" Lesourd said, that plays what its audience wants to hear and separates the song from the political position. Also still on the playlist: Toby Keith's "Courtesy of the Red, White and Blue (The Angry American)."

My hat's off to Maureen. I think she's doing the right thing. Alleged patriots claim our guys are protecting the freedoms we enjoy out of one side of their mouths and wanting to ban speech they don't like out of the other side. My guess is there are a lot of soldiers out there still listening to the Dixie Chicks in the middle of the desert.

Allowing opposing opinions does more to validate what our soldiers are doing than anything else I can think of. They're trying to topple a tyrant who has made censorship a mainstay of his regime. It doesn't make sense to me for us to be doing the same thing under a different banner.

Let them speak. In the end we'll be more faithful to what we stand for and it'll have absolutely no effect on the outcome of this war.

What inconsistency? Are you saying that those who would react to what someone else says under their "First Amendment Rights" should be prevented from expressing a counter view or, put another way, "censored" in their reaction? No one and nothing guarantees ANYONE an audience, nor is there a guarantee of a favorable response or freedom from consequences for one's self-expression.

> The concept that private enterprise should be exempt from the important
> task of preserving such social guarantees also appears to be more than
> just a little self-serving.

So you would deny private enterprise from expressing its own views? If you don't like what the industry did, then you have means at your disposal to express yourself. The antidote to speech or actions you don't like is more speech, not condemnation for such expression.

> And we wonder why some in the wider world have come to the conclusion that
> the American Constitution is just a collection of empty words.

No, it is a "collection of empty words" if we allow SOME people to
express themselves and not others.

The Dixie Chicks would not have been banned for a cover of "Imagine." A fairer test is whether hip-hop artists can get airplay assailing Bush by name. Maybe they can. The Dixie Chicks' free speech rights are no less guaranteed than those of hip-hop artists, but the tolerance of it by their audience is entirely a matter of marketplace choice.

Why should a radio station be forced to play something that it's listeners don't want to hear?

Why should the listeners be forced to listen if they want to hear the station's broadcast?

I often say in many spam discussion forums (like
news.admin.net-abuse.email here on Usenet) that free speech rights
don't trump personal property rights or the right not to listen. A
similar principle is at work here.

> And we wonder why some in the wider world have come to the conclusion that
> the American Constitution is just a collection of empty words.

So you advocate changing the law so that, for example, you can't get
into trouble for yelling "Fire!" in a crowded theater?

Jeez! Not another "Concerned Citizen's Group." Especially one that won't identify itself or tell us what the target of the boycott has done to deserve a boycott. From what I found on www.sanfranciscohiphop.com it appears to be a compilation of San Francisco artists.

Before you ask us to destroy someone's efforts you should extend us the courtesy of telling us who makes up your group and what the "offenders" have done.

Re: NYC Metro Airwaves - TOO MANY SOUND-ALIKE STATIONS

This is a problem for all of us grownups everywhere who love real music. In a shameless gesture of self-promotion, I'd like to invite everyone to listen to the radio station I work for, "The Whip."  We play rock, blues, real country, bluegrass ... all things considered American Roots music, i.e., no Contemporary Top 40 or Rap. If you have the capability to listen online, tune us in at
http://wwhp.com

Thanks!

Punchy.
"Somewhere between Memphis & Chicago is 'The Whip'"

The Dixie Chicks' free speech rights are no less guaranteed than those of hip-hop artists, but the tolerance of it by their audience is entirely a matter of marketplace choice.

Hmm. I read a poll of listeners in one of New York's newspapers (it was a wire service story, not New York). It showed about 66% of listeners surveyed either wanted the songs kept on the air or didn't care, either way. The "yes" votes said they believed she had a right to say whatever she believed and they would continue to listen to their music.

Doesn't sound like a marketplace choice to me.

Rich

>So you advocate changing the law so that, for example, you can't get into trouble for yelling "Fire!" in a crowded theater?<

Steve, you're the moderator of this here place.  You really should know better.

The First Amendment, according to Mr. Justice Holmes, does not protect FALSELY yelling "Fire!" in a crowded theater.

If there's a fire, would you remain silent and let everyone in the theater die?????

In honor of Mister Rogers' March 20th birthday, we're pleased to announce that our spontaneously produced 3/1/2003 tribute program is now available on-line at www.slbradio.com in streaming MP3 format.  Broadcast three days after his passing, this edited aircheck includes many original Mister Rogers songs (including historic recordings), puzzles based on Neighborhood characters, and heartfelt calls from listening kids and adults.

John Higdon <no-spam@amadeus.kome.com> writes:

>So you would deny private enterprise from expressing its own views? If
>you don't like what the industry did, then you have means at your
>disposal to express yourself.

That is, of course, absolutely untrue, since I lack the access to the public airwaves that a large broadcasting company has.

>No, it is a "collection of empty words" if we allow SOME people to
>express themselves and not others.

And that is indeed what has happened.

I have no problem with broadcasters expressing particular points of view; but they ought to leave some room on their airwaves (which, after all, are *our* airwaves) for the views of people who disagree with them.

Mea culpa! I meant yelling "Fire!" when there is no fire.

What does the Constitution have to do with this?  A radio station (or group of stations) has the right to play or not play what they want, no?  Are you advocating that a radio station should be forced to play a song it doesn't want to?  Because if you aren't, then you have no argument.

When the dust settles, it will probably turn out to have been some programmers trying to get their stations noticed and talked about.

When one of our stations decided a few years ago to ban opera from its airwaves there was a huge hue and cry. The local newspapers vilified us, accusing us of "selling out" and spearheading the cultural "dumbing down" of America. We got deluged with angry letters and phone calls, including some death threats. And then the fall book came out, and the ratings were higher than I'd ever seen them. They stayed high, too, for a year or two.

People let me tell you 'bout my best friend, Rich Wood
<richbwood@earthlink.net>'s a warm hearted person who'll love you 'til the
end.

> I was under the impression that the military was fighting for all the
> good things the US stands for. One of which is freedom of speech.

They sure are.

> Doesn't it make their efforts less valiant when we then censor those
> who exercise the rights these men and women fought for?

I wasn't aware they were censored. In fact, I'm pretty sure Natalie's
thoughtless and narrowminded statement was broadcast and printed in just
about any news related medium there is in this country.

Or is what you're confusing "censor" with actually what we call our right
to not support someone we might consider shallow and inconsiderate of the
very things that gave them the freedom to be callous in the first place?

> Are we willing to ban every artist who says or sings something we don't like? Sounds like the death of Hip Hop. What would happen if Eminem or 50Cent had done the same thing? How many stations would stop playing them and how many listeners would complain to either force stations to drop them or object to banning them? My guess is that Hip Hop listeners would object to banning. They're used to artists speaking their minds.
>
> Is there more free speech in Hip Hop than in Country?

The market decides who gets played and who doesn't.  Hip-hop gets played because there is an audience willing to buy it, and it appeals to some advertisers.  Cop-killing hip-hop doesn't get the play it once did because a large segment of the audience didn't want it.  Country stations program to a country audience, and the country audience doesn't seem interested in the Dixie Chicks right now.  Neil Boortz made a comment last week that Natalie should make those comments on the stage of the Rymen Auditorium and "see how that crowd likes it."

Each station (or group of stations) can make their own marketplace
decisions.  Are their decisions always accurate?  If they were, then nobody
in radio would ever get fired for making bad format decisions, bad
programming decisions, etc.  A radio station mis-read its audience?
Nooooooo!  That's never happened.

Real music has tonal and rhythmic characteristics that can be
definitively qualified. There are sounds played on some radio stations
that are definitively NOT music.

I understand that a color commentator for Cincinnati's Basketball games was ejected from the arena for yelling at officials.  This came after Cincinnati coach Bob Huggins was ejected for arguing with officials.  This is the first time I can ever recall a sports broadcaster actually being ejected from a game for arguing with officials.  I used to engineer high school and college sports games for some stations here in Kentucky, and some of our announcers would get pretty heated on the air about poor officiating.  One guy I worked with wife's was a coach for a girls high school basketball team and his voice was gone after the game broadcast because he got so heated about bad calls going against his wife's players.  There may be something on some of the sports web pages about this.  I just thought this was interesting.

This is most likely NOT a knee jerk reaction.  Remember, Radio is in the "Moving Products off of clients shelves" business.  If 90% of existing listeners thought that they had no problem with the Dixie Chicks and 10% would leave and go to my competition everytime they heard a DC song then guess what?  10% of my audience migrates when the song comes on and I'm now screwed.  Do I see the 90% leaving because I do NOT play them?  No way.    I DO see the 10% (And my numbers show well over 50% here) leaving when they hear the song.  What do I do?  Drop the group and avoid the subject.  If you turn on the radio and hear the song playing, you might be annoyed.  If you

```
turn on the radio and DON'T hear the song playing you won't be annoyed NOW
and this whole thing will most likely be over before anyone realizes we
dropped it.

It's all about the money and the perception...

TT

It's a very funny site. I particularly enjoyed the thread about hum at
the fringes of the signal. Someone suggested that the power supply has
to be free of ripple (electronic, not booze). It would seem to me that
a noisy power supply would make the signal noisy at all distances, not
just on the fringes. My guess is the guy has high voltage power lines
where he's testing.

Help Need Abbott and Costello Nov 04 1943 Radio Show Season Premiere OTR

Help, I'm looking for Abbott and Costello Nov 04 1943 Radio Show.
It was the Season Premiere that was broadcasted live the same day
Lou's son drowns. Bud gave a heartfelt speech at the show's close.

I've checked the usual places on the internet but only found the
following shows for 1943 at several OTR sites.

43-01-14 Hunting Guide with Claire Trevor - 29:12
43-03-16 At the Circus with Alan Hale - 29:05
43-11-18 Nylon Stockings with Lucille Ball - 29:43
43-11-25 Costello's Pet Turkey with Jane Wyman - 27:00
43-12-02 Trip to Palm Springs with Veronica Lake - 29:43
43-12-09 English Butler with Arthur Treacher - 29:35
43-12-16 The Wild West with Lynn Bari - 28:36
43-12-30 The Lawyer with Bert Gordon - 29:15

I'm would like to find the show 43-11-04 "Abbott & Costello
Season Premiere". It may have also been rebroadcasted on another
date.

I also heard there is a show where Lou has a show talking about
his son but I don't have a time or date.

Please email or post any info that you have.

No, there is actually some theoretical substance to that issue. Ripple in the transmitter power supply would create asychronous AM noise on the carrier. In a receiver that had a solid signal, this would be a non-issue due to limiting in the receiver's IF stages. In a fringe reception situation, the IF would be unable to clip off the AM component and that noise would be passed to the FM discriminator. Some FM detectors are better than others at rejecting AM noise, but the fact is that AM noise on an FM carrier may become apparent when the signal strength drops below full receiver limiting.

But I agree: in addition to high voltage power lines overhead, most of those folks have bats in their belfries.

Hi,

For years my brother and I have referred to the name "Hartley Benson" to denote a certain type of rich, nose-in-the-air person because we remember a character with that name in an old time radio show.  I've done loads of searches with different spelling but can't come up with anything.

Does anyone out there remember the character and can tell me what show he was in or (what would be wonderful) to hear an old show the character was in.

NYCPaul

Pardon me, but the title of this thread includes the letters "am".  You and I both know that AM receivers don't have limiting in their IF.

Sorry. When talking about toy radio stations, I naturally assume FM. I
can't imagine that any of these wanabees would bother with AM. And I'm
used to seeing "AM", not "am".

Yes, if you're talking about an *FM* transmitter.  The person who started that thread was referring to an *AM* transmitter.

I suspect you and I know what's wrong with it, but the children with the toys are obviously the experts, so let them figure it out.

Absolutely right. I had no thought that we were talking about Amplitude
Modulation. That means the article in question is indeed complete
technical nonsense.

Bats make noises that sound like hum, sometimes. My bet is that
there's a barbershop quartet nearby.

WOW...with over 100 posts in this thread do "old DJs" deserve their
own Google listing or at least a web page to hang out in?

I started at the CBS affiliate WGBI AM/FM and WDAU-TV in Scranton, PA back in the early 60s while going to college. The stories in this thread are full of memories for me. I still dream about those FCC readings; especially when you add the regular broadcast log AND the occasional ASCAP survey of the records you played. I never worked with an engineer - did all my shows from the board. But my day included preparing and doing the 7pm and 11pm TV weather and "after the movie" on-camera cut'n'read news. And I also had a late night radio show down the hall.

My occasional nightmares include being on the "throne" down the hall, alone in the station when the red light and buzzer in the hallway goes off telling you there has been at least 15 seconds of dead air. Then there was the young couple who called to request "Tenderly" and nine months later calling to tell me they named the baby after me. Or I recall the terror of seeing my "old timer" mentor at the station get his finger caught during a live aluminum window commercial. Another nightmare for me was not remembering to tape the network feed of a show that was to play the next day and forgetting this while you were doing your own live show.

Oh well, thanks for letting me vent and letting me know that we could organize our own convention of "old DJs" by sending invitations to everyone in this thread. Anyone know if there is a web page for us relics from the Golden Age of Radio - - - when it was a hell-of-a-lotta FUN?

Thanks all,

Paul Lowry

Couple more possibles: assuming there really is a hum on the main
signal, he may not be hearing it due to the thing being near full
reduction in the first stage.

Also, given a lot of AM rec'rs have a high-pass filter just past the
detector stage,(usually to limit the phase induced distortion caused
by motion of the radio relative to the signal, etc) or else the
amp/speaker simply doesn't respond down that low... either of these
situations would also account of the hum only being on the edges; At
the edges you pick up more of the harmonic, which, by the fact it's
twice the original hum freq, would get by the filter.

I was on KOSI, Denver, in the '50's when it was the first rock-and roller. One weekend went to see a girlfriend in Goodland, Kansas, right across the state line, and she introduced me to a teenage girl who worked at the same newspaper she did.

The girl said nothing, but turned bright red and literally ran away.

Later she admitted to my friend that she and her boyfriend regularly listened to me in the car when they were....  Remember this was about 1957. She said she realized that it was foolish because I had no way of knowing....  Which made her doubly embarrassed.

Ted Cooper

>
> Now we're under more pressure to put wildly ill-advised Amber alerts on the air with the same technology and we get the same indefensible results. Ugh.

Here, too.  It doesn't lose its mind nearly as often with the UPS, but I think I can still remember which menu items the "one-button" functions are...  (and yes, it's interesting that those seem to be the only settings that are lost - I can't remember last time I've had to set the clock...)

We have the scrolling remote sign. It was a huge pain when it was first installed - and when we installed the Amber firmware in the 911, it lost its mind too. I just about lost *my* mind trying to get it working again.

Luckily all we do is log and initiate RWT and relay RMT - Amber isn't yet established in Nashville. I wish y'all hadn't reminded me that someday soon, it will be...

Hello,
My name is Paul and I run the Joe Franklin Fan Club. Some of you might remember Joe's TV show that ran for 40 years. He still has a radio show on WOR 710AM in NY Saturday night at midnight until 5AM Sunday. I am a personal friend of Joe's and appear on his show regularly. I wanted to invite all that are interested to join this great, fun club. You will find oldtime songs, plenty of links to fun and interesting websites, photo's, and a sneek preview of each week's show. All free of charge. Joe is very thrilled about this club and every Saturday I show him anything I've added to the website. So feel free

to check out this nice tribute to Mr. Memory Lane.

Unfortunately, here in the land of the free, radio isn't free on the net, as has been pointed out here. However, outside the U. S., in Canada and Great Britain for instance, there's some streaming happening. A sight called Mike's Radio world is one of the best refernces for who is streaming, and he does keep the listings pretty current. I don't have the URL handy but it shows up readily in search engines.

Peace,

Larry

Put their names inside quote marks on www.google.com and try it.....
That makes Google do a string search for the entire name so make sure
it's spelled right.

For sale:

The "Radio Crazy" is back!

Partial interest in fulltime 1 KW AM radio station in
Western Kentucky. On the air since the 50s of the last

century.

No real estate is included. You heard it first here, kiddies!

Joint venture. Active/inactive investors with at least $15,000 each are welcome. All investors would be on the board with full voting rights if desired.

This is a wonderful city and I will disclose more only to qualified and ready investors who fully identify themselves. The full price is expected to be at least $100,000 including all the technical gear except the tower which is leased. Additionally we get the FCC license, callsign and goodwill. We will have to find and build new studios.

I am a semi-retired broadcast engineer. My last job in radio was Chief Engineer for a 5 KW fulltime AM in New York City. I think that gives me the right to call myself "Diplomat with Portfolio" eh? HI HI!

Tel: (478)741-1710 or email.

73,

Meyer Gottesman, W6GIV

There is a biography of McLendon by Garay available from Amazon; a CD on
Storz is available form a website you can find by searching on "Todd Storz."

Also, several of the "History of Top 40" books have sections on early Top
40.

For those who don't have a progressive, Radio Pacifica radio station near you, or who would like to listen to one, let me recomment for your listening pleasure WMNF of Tampa, Florida, available on the internet at:

http://www.wmnf.org

Public affairs programming is aired from 11:00 a.m. to 1:00 p.m. EST daily. Their local and international news at 6 p.m. EST is also informative. They have great music, and a wide variety of programming. WMNF is listener supported, and appreciates all donations.

Hello, looking for video footage from 7/12/79 Disco Demoltion from Comiskey Park, Chicago Illinois. This was led by Chicago DJ's Steve Dahl and Garry Maier. I have partial video coverage but am aware that the complete deal was released shortly on video back in the mid '90s or so in Chicago. I also think a version from alternate sources is out there. This happened between games of a double header between the Tigers and White Sox in Chicago. I saw this as a kid and remember the first game was quite a sight to see also with the stadium packed full of fans ready to riot. Please contact me directly if you can help me cause. altv2k@yahoo.com

Maprather <maprather@aol.com> had written:
|
| I'm doing some personal research on early Top 40 radio. Does anyone know
| if there are any books that have been published covering the careers of Todd
| Storz and Gordon McClendon???

An obscure source regarding the topic is a Ph.D. dissertation at the University of Wisconsin, "The Development of the Top 40 Radio Format", by David Thomas MacFarland, in 1973. I found it in a state university library in the Midwest.

My notes stated "great material on McLendon". It also deal with the early days of KOWH and WHB. My notes indicate it as the only source for the date when WHB dropped its Mutual affiliation (10/17/1954).

Unfortunately, here in the land of the free, radio isn't free on the net, as has been pointed out here.  However, outside the U. S., in Canada and Great Britain for instance, there's some streaming happening.  A sight called Mike's Radio world is one of the best refernces for who is streaming, and he does keep the listings pretty current.  I don't have the URL handy but it shows up readily in search engines.

Peace,

Larry

Joint venture. Active/inactive investors with at least $15,000 each are welcome. All investors would be on the board with full voting rights if desired.

This is a wonderful city and I will disclose more only to qualified and ready investors who fully identify themselves. The full price is expected to be at least $100,000 including all the technical gear except the tower which is leased. Additionally we get the FCC license, callsign and goodwill. We will have to find and build new studios.

I am a semi-retired broadcast engineer. My last job in radio was Chief Engineer for a 5 KW fulltime AM in New York City. I think that gives me the right to call myself "Diplomat with Portfolio" eh? HI HI!

Tel: (478)741-1710 or email.

73,

Meyer Gottesman, W6GIV

Put their names inside quote marks on www.google.com and try it.....
That makes Google do a string search for the entire name so make sure
it's spelled right.

There is a biography of McLendon by Garay available from Amazon; a CD on Storz is available form a website you can find by searching on "Todd Storz."

Also, several of the "History of Top 40" books have sections on early Top 40.

For those who don't have a progressive, Radio Pacifica radio station near you, or who would like to listen to one, let me recomment for your listening pleasure WMNF of Tampa, Florida, available on the internet at:

http://www.wmnf.org

Public affairs programming is aired from 11:00 a.m. to 1:00 p.m. EST daily. Their local and international news at 6 p.m. EST is also informative. They have great music, and a wide variety of programming. WMNF is listener supported, and appreciates all donations.

Hello, looking for video footage from 7/12/79 Disco Demoltion from Comiskey Park, Chicago Illinois.  This was led by Chicago DJ's Steve Dahl and Garry Maier.  I have partial video coverage but am aware that the complete deal was released shortly on video back in the mid '90s or so in Chicago.  I also think a version from alternate sources is out there.  This happened between games of a double header between the Tigers and White Sox in Chicago.  I saw this as a kid and remember the first game was quite a sight to see also with the stadium packed full of fans ready to riot.  Please contact me directly if you can help me cause.  altv2k@yahoo.com

| if there are any books that have been published covering the careers of Todd
| Storz and Gordon McClendon???

An obscure source regarding the topic is a Ph.D. dissertation at
the University of Wisconsin, "The Development of the Top 40 Radio
Format", by David Thomas MacFarland, in 1973. I found it in a state
university library in the Midwest.

My notes stated "great material on McLendon". It also deal with the
early days of KOWH and WHB. My notes indicate it as the only source
for the date when WHB dropped its Mutual affiliation (10/17/1954).

Mike Batchelor still is running it, I believe. He is in the process
of relaunching it as www.missouriradio.net. A site relaunch is
tentatively planned for Monday.

I'm a collector always looking to buy live concert radio shows such as King Biscuit Flower Hour and Westwood One Superstar Concert Series on CD.  I prefer to buy large lots of 25-50 shows but will consider any number large or small. If anyone has anything available, please e-mail me and I would be happy to make a cash offer.

Best regards,

Steve

Steve, have you ever downloaded from alt.binaries.sound.radio.oldtime or alt.binaries.sounds.radio.oldtime or alt.binaries.sounds.radio.oldtime.highspeed newsgroups?

There are thousands of radio shows per month to download for free. They are in MP3 format, usually very low bitrates (32Kbps), but they sound as good as the original transcription they came from.

Give it a listen.  I probably have 300,000 here....(c;
Newsgroups are loaded with things to listen to and collect!

Will regular contributor Gottesman be kind enough to advise any
potential investor the number of stations he has helped put on the air
since his  commercials began. Also.what are the call letters of the
radio station in New York City where he was last employed. This is never
mentioned> Potential investors do like references.

You want decent music??? You'll have to try DMX, Sirius or XM. WLIR 92.7 when Dick Neer and Mike Harrison were spinnin' real vinyl, that was great radio.

I don't understand why people like Chris can't grasp that others might like music that they don't. Personally, I am extremely picky about what I'll listen to WRT hip-hop but some of it is really good and, believe it or not, takes more than two brain cells to enjoy. (Arrested Development and A Tribe Called Quest, for example.) I'll even listen to stuff like Ludacris that has no redeeming social value whatsoever if the beats and the rhymes are good enough (and their lyrics are pretty good). Not all rap artists write songs about how many people they shot this morning.

BTW, I am watching this thread very carefully. I'm concerned that it is going to descend into a flame war. Everyone's done a great job of avoiding the personal attacks so far; please keep it civil. Thanks.

Does anyone happen to remember who the PD was behind the "Smoking Oldies jukebox" programmes when KHJ used the call KRTH on AM 930.

Is he still around in radio?

Many thanks.

For sale:

The "Radio Crazy" is back!

Partial ownership (Joint venture) in 1 KW class "C" AM
(Formerly called class IV) AM radio station in S.
Georgia. On the air since 1955. Only $75,000 total
asking price. NO real estate. You heard it first here,
kiddies! HI!

Active or inactive investors with at least $10,000 are
welcome. All investors would be on the board with full
voting rights if desired.

Station in near prospering Valdosta, GA.

Studio/transmitter rent is $400.00 per month.

Call (478)741-1710 in Macon, GA or email.

I am not a crook! Also, be advised that I am not an agent, broker, shill, owner or part owner of this mess! I am a semi-retired radio engineer. Again, I am not a crook, etc.

Only those properly identifying themselves will be told the callsign and city of license.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy" aka Meyer, the animal!

Are you kidding?

Each of the companies you mentioned is either nothing but:

a) a jukebox (DMX)
b) filled with lame programming/soundbytes that repeat over and over and over (XM)
c) voice-tracked boringness (Sirius)

To return to decent music/radio, you would have to invent a time machine. Live, interesting choices simply don't exist in most areas from any source. Some Internet radio maybe, but generally, it too is focused too much on repeating programs, or jukebox styled radio.

I've tried all of the above mentioned. You just can't pay any amount to get the quality of programming you could for free even as late as the mid 1990s in most areas.

Just Curious - Might you be the Wendy Craig who worked at WTKO/Ithaca in the
early '60's??

-----------------

I don't know why there is so much denial about what was essentially
the nuts n' bolts of American culture from basically the '50s up
untill the late '80s or so.  To consider it "KKK" culture is (sorry)
ludicrous, and beyond that, at least to my knowledge weren't trying to
rewrite the English language:

Ludacris, Mystikal, 50(pron. "fitty"cent)Cent - fer cryin' out loud!
My kids will NOT become a part of THAT culture.

I will admit I do like some rap - as long as it's more than 20 years old. But I will always remain partial to those parts of our culture that to me remain as iconic of it as the good ole' American flag. Which I assure you will never be waved over Bush's 51st state!

-ChrisCoaster
"Awhh you should've seen what I tore in half with the front end of my 79' Camaro - it used to be a Civic CRX with cha-cha music blarin' out the windows! Now it's just an add-on to my front bumper. In the hospital, the driver said the last words he heard were "MORE THAN A FEELING!" (Boston) and then he blanked out..."

No one is telling you you have to like {insert-specific-music-genre-here}.

No one is denying that certain things happened between the 50s and the 80s, although your comment about "KKK culture" seems to imply you think everything that happened back then was ok. (I'm not saying that's the way you feel. I'm saying that's what it might look like to some people.)

All *I* personally am saying is... hold on for a second. Let me tell you a quick story:

If you visit Google Groups and search for posts of mine from a few years ago, you'll notice comments about Cleveland's WENZ-FM switching from modern rock to urban, with an emphasis on rap and current R&B.

There were a couple people who were really pissed off about that flip!

But the fact of the matter is that the majority of residents of the city of Cleveland (and a number of suburbs) are African-American and Hispanic. Radio One very likely bought the station because they saw a huge market not being served, and wanted to make money; programming to the people who make up most of the population of Cleveland is *what they do.*

I was very sad to see 107.9 the End shuttered. But the fact is that it never made money. Beasley(sp?), Ardman and Clear Channel, the three companies that owned the station between 1992 and 1999, had other properties too. In fact, Clear Channel (at the time) owned WNCX-FM, which was a big money-maker... classic rock and oldies have always played well in this market, and in addition, WNCX has Howard Stern in the morning and he was *hot* back then.

When Clear Channel bought Jacor, which already had five stations in Cleveland, they dumped WNCX to Infinity, and suddenly had two other properties (WENZ and WERE 1300) that were poor performers. Both stations were sold to Radio One, which also picked up adult urban WZAK 93.1 and "Solid Gold Soul" WJMO 1490.

I mean, I can't stand the homogenization that pervades radio these days -- and wasn't that the original point of this thread? -- but on the other hand, I don't expect any radio station owner to hold on to a money-loser, either.

> I will admit I do like some rap - as long as it's more than 20 years
> old.

You really ought to get yourself an Arrested Development CD. "3 years, 5 months and 2 Days in the Life of..." was their breakthrough album. It RAWKS. I think you'll be pleasantly surprised.

Speech, one of the members of AD, has a new solo album and a website
(speechmusic.com). He mentions on the website that the band also has a
new album. Look into it.

I vote for the Sangean DT-200V. It meets all your requirements to the
tee that you mention. I've owned them for years and would never use
anything else.

They are available from the C Crane Company (www.ccrane.com) and run
$65. But it's well worth the price.

No I don't kid around.  I listen and grab cut's off  DMX and Sirius.  The closer it is to a Juke Box, the more I like it.  I would agree that both Sirius and XM should shitcan the stupid soundbites and useless announcers that step on the intro and outros of some songs.  DMX provides the best service.  Wall to wall music with no annoying interruptions.

For sale:

The "Radio Crazy" is back! Partial ownership of
fulltime 1 KW AM radio station for sale. Joint
venture.

In S. Georgia in very nice community of about 5,000
population. Only AM in community. Near much larger
city. NO real estate included. Studio/transmitter site
combined and leased at $400.00/month.

Active or inactive investors with at least $10,000 are
welcome. PLEASE! No "AM bashers" or "negative nabobs"
(I don't know what a nabob is, either! HI!)

Tel: (478)741-1710 in Macon, GA.

I am NOT an agent, broker, shill, owner or part owner
of this station. You heard it first here, kiddies!

I am not a crook! In fact I am former Chief Engineer
for a 5 KW fulltime AM in New York City.

73,

Meyer Gottesman, W6GIV

> properties too. In fact, Clear Channel (at the time) owned WNCX-FM, which was a big money-maker... classic rock and oldies have always played well in this market, and in addition, WNCX has Howard Stern in the morning and he was *hot* back then.
>
> When Clear Channel bought Jacor, which already had five stations in Cleveland, they dumped WNCX to Infinity, and suddenly had two other properties (WENZ and WERE 1300) that were poor performers. Both stations were sold to Radio One, which also picked up adult urban WZAK 93.1 and "Solid Gold Soul" WJMO 1490.
>
> I mean, I can't stand the homogenization that pervades radio these days -- and wasn't that the original point of this thread? -- but on the other hand, I don't expect any radio station owner to hold on to a money-loser, either.
>
> > I will admit I do like some rap - as long as it's more than 20 years old.
>
> You really ought to get yourself an Arrested Development CD. "3 years, 5 months and 2 Days in the Life of..." was their breakthrough album. It RAWKS. I think you'll be pleasantly surprised. Speech, one of the members of AD, has a new solo album and a website (speechmusic.com). He mentions on the website that the band also has a new album. Look into it.

________________________________________

I have heard a lot of modern rap - most of it by accident - blaring out of car windows, over the PA in record stores, surfing the cable, including AD that you mentioned.  I'm simply not impressed, even though I will admit the beat can be quite catching.

Nor do I condone *everything* that went on in American culture 20 to 50 years ago.  I simply mourn the loss of everything CULTURAL - that is, our music, movies, even the English language to some point - over that period.

Doesn't it piss you off when you go into a retail establishment, particularly one where you must order something, only to have to repeat the order 2 or 3 times?  Past that, the counter help then needs to go in back, ask their supe or boss to come out to clarify to them what you are asking for.

Why?  Because even in the business world(not limited btw to those "glass towers") in this country knowing English is not even a REQUIREMENT to get a ferakin' job!!  Call me a racist if you want, flame me, I don't care - but your native tongue, whatever it may be, is your own business - AT HOME.

In the American business world, from the CEO's corner office down to the individual cleaning the toilets at X-Mart, English is the spoken language.  It is the language when you are asking directions in the store.  It is the language when you request the concierge to call a taxi to your hotel.

And...

It is the language used to alert a passing "clerk" that there is a suspicious looking person or sign of smoke in a place of business, where seconds make the difference between an arrest or a mass shooting, or between an extinguished dumpster fire or the loss of dozens of lives.

These people are coming to OUR shores to find a better life, jobs, education. They therefore should be required to learn OUR language and USE it while they are here.

Now come on Scott Muni, play me some rock n' roll!

Amateur Radio Newsline™ Report 1335 – March 14, 2003

Amateur Radio Newsline report number 1335 with a release date of Friday, March 14 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  The FCC has a new tool to keep people honest and the ARRL tries again in Congress.  These stories are first on Amateur Radio Newsline report number 1335 coming your way right now.

(Billboard Cart Here)

**

RADIO RULES:  FCC SAYS YOU HAVE TO TELL THE TRUTH

If you have to contact the FCC, be sure to tell the truth.  This is because the Commission has revised its own rules to strengthen the requirements for the submission of truthful statements to the agency.  Amateur Radio Newsline's Bruce Tennant, K6PZW, tells you who is affected and what it all means:

--

As amended, section 1.17 of the Commission's Rules prohibits written and oral statements of fact that are intentionally incorrect or misleading.  It also prohibits written statements of fact that are made without a reasonable basis for believing that the statement is correct and not misleading.

In requiring that submitters of written statements in fact-based adjudications and investigations have a reasonable basis to believe that what they say is correct and not misleading, the Commission is imposing on the submitters a duty of due diligence.  This includes the obligation to take appropriate affirmative steps to determine the truthfulness of what is being submitted.

The now revised section 1.17 broadens the category of persons subject to its requirements to include any applicant for, or holder of, any Commission authorization.  Also subject is any person performing without Commission authorization an activity that requires Commission authorization; any recipient of a Commission citation or letter of inquiry, or any person subject to a Commission or staff investigation

Others covered include those in a proceeding to amend the FM or Television Table of Allotments, any person filing an expression of interest, and, to the extent not already covered, any cable operator or common carrier.

Perhaps the most interesting of these is any person performing without Commission authorization an activity that requires Commission authorization. That's a fancy, legalese way of saying bootleggers.  And its telling bootleggers that lying to the Commission can bring with it some pretty hefty penalties.    Consequences far more severe than just the act of unlicensed operation, itself.

The amended rule applies to all investigatory and adjudicatory matters.  It does not apply to declaratory ruling or to rulemaking proceedings except for expressions of interest in proceedings to amend the FM or Television Table of

Allotments, and tariff proceedings. Attorneys and engineers acting in their representational capacities are not covered by the amended rule.

Simply stated, almost everyone is now subject to the revised and enhanced section 1.17 FCC rule. This includes all of us with Amateur Radio Service callsaigns attached to our names.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The FCC claims that this new rule is a clearer, more comprehensive, and more focused articulation of the standards for truthful statements than the old rule. The Commission also said that it will enhance the effectiveness of its enforcement efforts. You can read it all at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-231908A1.doc and at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-45A1.doc (FCC)

**

RADIO RULES: FCC TO CONSIDER RECEIVER STANDARDS

The FCC has decided to consider on an item that it has been extremely reluctant to act on in the past. That being the setting of interference immunity performance specifications for receivers.

Specifically, the FCC says that it will consider a Notice of Inquiry concerning the possibility of incorporating receiver interference immunity performance specifications into its spectrum policy on a broader basis.

It all falls under MM Docket No. 00-39. Its titled Interference Immunity Performance Specifications for Radio Receivers; Review of the Commission's Rules and Policies Affecting the Conversion to Digital Television. You can read more on the web at the U-R-L appearing in the print edition of this weeks Amateur Radio Newsline report. Its all in cyberspace at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-231820A1.doc (CGC)

**

RADIO POLITICS: AR SPECTRUM PROTECTION ACT IN BOTH HOUSES

The ARRL Letter reports that the Amateur Radio Spectrum Protection Act of 2003 now has been introduced in both chambers of Congress. Idaho Senator Michael Crapo introduced the Senate version of the bill, S 537, on March 6. Its original cosponsors were Senators Daniel Akaka and Larry Craig. Florida Representative Michael Bilirakis put the latest House version of the bill, HR 713, into the legislative hopper on February 12th.

HR 713 and S 537 are twin ARRL initiatives aimed at ensuring the availability of spectrum to Amateur Radio operators. The legislation would protect existing Amateur Radio spectrum against reallocations to -- or sharing with -- other services unless the FCC provides equivalent replacement spectrum elsewhere.

The Amateur Radio Spectrum Protection Act legislation has already been introduced twice before Congress.  League President Jim Haynie, W5JBP, believes this third time could be the proverbial charm.  (ARRL)

HIGH TECH SHOWDOWN:  IRAQ MAY TRY TO JAM SATS

I'm Blair Alper, KA9SEQ, with this late breaking story.

If Iraq could tries to jam U.S. military satellites during a possible invasion, it will be in for quite a surprise.  This, according to a Pentagon official who hints that the United States already has countermeasures in place.

News reports say that Iraq is reportedly seeking ways to jam the Global Positioning Satellites that would be used to help guide so-called smart bombs. But Brigadier General Franklin Blaisdell who is the Air Force's space operations director says it really can’t be done these days.  He says that any enemy that would depend on G-P-S jammers for their livelihood is in grave trouble.

Blaisdell says that, as it did during the 1991 Persian Gulf War, the Defense Department is buying access to commercial communications satellites.  This, to help provide the massive bandwidth needed to connect all the high-tech gear a modern army uses.  He adds that the military also successfully launched a broadband communications satellite on Monday the 10th.

For the Amateur Radio Newsline, Im Blair Alper, KA9SEQ, reporting.

**

RESCUE RADIO:  HAM RADIO ASSISTANCE REQUESTED IN MA. PLANE CRASH

Ham radio was called out on March 3rd to help locate a missing aircracft. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--

John Spencer, WA1NTI, was listening to his radio club’s 146.91 MHz repeater in the Pittsfiels Massachusetts area early on Monday morning March 3rd. That’s when John Lindley, WA1ZHM , put out a call looking for hams who could assist in locating a downed aircraft.

According to information provided by Arthur Rowe, N1ORC, Lindley said it was the Massachusetts State Police who requested radio amateurs assist in the search. In fact it was about 4 a.m. when a Lieutenant from the State Police Task Force came knocking on WA1ZHM's door. At the time the location of the aircraft was unknown and there was a wide search area to cover. The police told Lindley that the agency needed people with radio knowledge and equipment who could help triangulate the location.

Spencer says that the operators who could help out were told to report to the Sheffield Massachusetts Police Department. There they were briefed and shown an area of Beartown State Forest where the crash site was believed to be. The hams were tasked with listening for the airplanes 121.5 MHz Emergency Locator Transmitter and trying to T-hunt its exact location.

Gary Kleinerman, K1SXA, was put in charge of the group of seven hams. The downed aircraft was located by a Search and Rescue helicopter about 3 miles in from where Kleinerman and Spencer had been assigned to search. The chopper pilot also saw that there was at least one survivor.

Due to terrain, another heavy-duty rescue helicopter was called in from Albany New York to help rescue three boys who survived the crash. Unfortunately rescuers found the boys parents and two of their siblings were dead at the scene.

And even though the ham radio operators were not the first to find the downed aircraft, those involved in organizing the search and rescue effort thought enough of the skill of radio amateurs to have them take part. That's why they knocked on WA1ZHM's door in the middle of the night.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.
--

The three hour rescue involved police, fire and E-M-S from Massachusetts and New York. Volunteer manpower for the search came from Massachustts and Connecticut. (N1ORC)

**

ENFORCEMENT: NO AUTOMATIC CONTROL FOR YOU

On the enforcement scene, the FCC told David Price, WA6FUL, that he may not operate his repeaters under automatic control. This, while the enforcement Bureau reviews allegations of rules violations.

In a letter to Price from the FCC's Riley Hollingsworth, the Redwood City California ham was informed that these include charges of failure to identify and transmitting false call signs. Price was also warned that continued violations could lead to a fine or license revocation proceedings filed against him. (FCC)

**

## ENFORCEMENT:  DOJ SEIZES WEB SITE DOMAIN USED FOR ILLEGAL ACTIVITY

Sellers of allegedly illegal FM transmitters might want to take heed.  Bob Gonsett's CGC Communicator reports that the government has seized a web site used to sell chips designed to circumvent electronic copyright protection.  And now a Washington Post news story quotes government officials as indicatinfg that this move could be a harbinger of other such enforcement actions.  Its all on-line in cyberspace at http://www.washingtonpost.com/wp-dyn/articles/A7996-2003Feb26.html  (CGC)

**

## RADIO RULES:  FCC ADJUSTS ALLOCATIONS BELOW 28 MHZ

Also from the CGC Communicator comes word that the FCC has amended various parts of its rules.  This, to implement the decisions from the World Radiocommunication Conferences regarding various frequency bands below 28 MHz.

Affected spectrum and users include the expand A M Broadcast Band, International Broadcast Stations, the Amateur Service, and continued use of 26.110, 26.130, 26.150 and 26.170 MHz by Broadcast Auxiliary Remote Pickup stations.  There appeared to be no earthshaking items affecting the Amateur Radio Service.  Its too is in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-39A1.doc  (CGC)

**

## NAMES IN THE NEWS:  N1WRY BIKES THE SOUTH-EAST

Jason Baack, N1WRY, says that he will be looking for a few good  contacts. This, as he bikes across the South-Eastern United States over the next few months.

The SERA Repeater Journal says that Baack will be riding through Georgia and Florida during March as part of his 400 mile trek.  His bicycle is equipped with VHF FM and High Frequency SSB gear.  For more information please drop by Jason's website at www.n1rwy.com  (Repeater Journal)

**

## HAMVENTION 2003:  N8IGS REPLACES KB8OUO AS GENERAL CHAIRMAN

With only 10 weeks till the doors open on Hamvention 2003, Pat Neff, N8IGS, has swapped places with Jim Trangenstein, KB8OUO, and become the event's General Chairman.  According to sources close to Hamvention, Trangenstein stepped down because he had changed jobs. This left him little time to full-fill the obligations of the Hamvention's General Chairman's post.  Neff says that plans for Hamvention are on-target:

--
Pat Neff, N8IGS:  "We are planning on having a great 52nd show and see

interest picking up as we get closer to Hamvention 2003.  And, we continue to look at ways to inprove the show and make it the Amateur Radio event that every ham should experience at least once in their lifetime.”
--

Hamvention 2003 is slated for May 16th through the 18th at its longtime home at the Hara Arena in Dayton Ohio.  More information is on the web at www.hamvention.org  (ARNewsline™)

**

HAMVENTION 2003:  11TH ANNUAL CONTEST DINNER

Tickets are now on sale for the 11th Annual Dayton Contest Dinner.  According to this years Master of Ceremonies is Tim Duffy, K3LR, this years gathnering will be held on Saturday night, May 17th, at 6:30 PM at the Crowne Plaza Hotel on 5th and Jefferson Streets in downtown Dayton.  Rich Strand, KL7RA, is scheduled to be the after dinner speaker and the 2003 Contest Hall of Fame inductees will be formally announced by the CQ WorldWide Contest Director Bob Cox, K3EST.

All dinner ticket orders are handled exclusively by Craig Clark, K1QX at the Radio Bookstore up in Ringe New Hampshire.  You can place your order Monday through Friday from 10 AM to 6 PM eastern by calling 1-800-457-7373. International orders must use the comopany’s 603-899-6957 direct dial line. For more information please visit www.radio-ware.com on the World Wide Web (K3LR)

## NEW FRONTIERS: THE DCC WANTS YOUR PAPERS

Technical papers are being solicited for presentation at the 22nd Annual ARRL and TAPR Digital Communications Conference. The gathering is slated for Hartford, Connecticut, from September 19th to the 21st.

These papers will also be published in the Conference Proceedings published by the ARRL. Presentation by the author at the conference is not required for publication. Information on paper submission guidelines are available on-line at www.tapr.org/dcc.

Submission of papers is due by August 5th, 2003 and should be sent to Maty Weinberg, ARRL Headquarters, 225 Main Street, Newington, Connecticut 06111 or by e-mail to maty@arrl.org (WB8IMY, VHF Reflector)

**

## INTERNATIONAL - AUSTRALIA: THE MORSECODIANS RADIO SHOW

Mark Titterington, W1EOF, says over the web that ABC Australia has a radio program available about the early history of the telegraph called "The MoreseCodians." The program traces the electric telegraph from its invention in 1832 by Samuel Morse until it became obsolete in V-K land in the early 1960s when the last line ceased to function in Australia.

The show’s full summary can be found by taking your web browser to www.abc.net.au/rn/history/hindsight, click on more summeries and then scrolling down to the link "MorseCodians." W1EOF says that he is making arrangements to make the program audio available on the hamnutz.com website. He also plans to distribute it on CD for those that don't have a fast enough internet connection. His e-mail is w1eof@hamnutz.com. (W1EOF)

**

## INTERNATIONAL - WORLDWIDE: RADIOMINISTRIES.ORG

Radioministries.org is a new website dedicated to assisting missionaries in remote regions with the communications through Amateur Radio. According to the groups Director, Scott Thile, K4SET, many missionary and relief groups are working in areas without access to land based phones, cell phones, or the Internet. These groups must find alternative ways to communicate within the group, and with family, friends and supporters back home.

Thile says that only a small number can afford satellite telephone service. Others must rely on alternate channels including ham radio.

K4SET hopes the new website will be of assistance to those in the missionary field. For more information visit http:// radioministries.org. You can contact Thile by e-mail to k4set@radioministries.org (K4SET)

**

DX

In D-X, Peter McKay, G3WQU, who has been active for a couple of years as CN2PM and S07PM from Morocco and the Western Sahara, will be moving to East Timor at the end of March. He operates almost exclusively CW. Look for him operating with a 4 W prefix from his next Q-T-H. (GB2RS)

Also, DL2GAC, who has been active from several Papua New Guinea island groups as P29VMS, has moved on to the Solomon Islands. He plans to be active as H44MS until mid-April. (GB2RS)

And the Balkan Contest Club LZ1KZA will operate with the special event callsign LZ125O through the 31st of March. This to commemorate the 125th anniversary of the liberation of Bulgaria. Activity is on CW, SSB and RTTY on all the HF bands. (Via e-mail)

**

THAT FINAL ITEM: A MILESTONE FOR SETI@HOME

And finally this week a story about a screen saver that is close to the hearts of many radio amateurs. Amateur Radio Newline’s Henry Feinberg, K2SSQ, is here with the latest on a project called seti@home:

--
After what adds up to more than a million years of computation by well over 4 million computers networked worldwide, the SETI@home screensaver that crunches data in search of intelligent signals from space has produced a list of candidate radio sources that deserve a second look. And in a few days the scientists behind the project will use a giant radio telescope to take a second look based on this data.

SETI@home is a more than the usual screen saver. Its actually a very high tech data processing program disguised as a screen saver. It springs into action after a computer is idle for a given length of time. Its purpose is to analyze radio telescope data downloaded to the machine over the Internet, search for strong or unusual signals from space and file a report back.

Many hams world-wide have embraced SETI@home and have it running around the clock on their P-C’s. They are the first to tell you that that the project is in keeping with the spirit of Amateur Radio itself.

Now, three members of the SETI@home team will head to Puerto Rico to use the giant radio telescope at Arecibo to revisit up to 150 places in the cosmos. These places in space have been identified as the source of possible signals from intelligent civilizations based on data already processed.

The candidates for that second look are particularly strong signals or ones that have been observed in the same spot more than once.  Some of them five or six times.  SETI@home project coordinators say that limited analysis of the signals will be done while the team collects the new data.  This will permit the observations to be halted and repeated if -- by chance -- a very strong signal reappears.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ
--

SETI@home users could find out the results of the re-observations within two to three months.  More on SETI@home in next weeks Amateur Radio Newsline report. (W6RCL, Published Reports)

OK. So, what's the point of the rest of your rant?

> Doesn't it piss you off when you go into a retail establishment,
> particularly one where you must order something, only to have to
> repeat the order 2 or 3 times?

I generally only have to do that when people aren't paying attention.

> Past that, the counter help then needs
> to go in back, ask their supe or boss to come out to clarify to them
> what you are asking for.
>
> Why?  Because even in the business world(not limited btw to those

> REQUIREMENT to get a ferakin' job!!  Call me a racist if you want,
> flame me, I don't care - but your native tongue, whatever it may be,
> is  your own business - AT HOME.

And exactly WTF does this have to do with music, or radio?

Alright, I agree that there are a lot of people who play their music
too loud. As long as they are *not* doing that, I can't see where it's
OK to insist that *other people* not listen to it. That's the whole
point of my replies, and each time I say something you use it as a
launching point for you to get on your soapbox. And you still haven't
answered my question, so at this point I can only assume it's because
you don't *have* a good answer.

> These people are coming to OUR shores to find a better life, jobs,

> education.  They therefore should be required to learn OUR language
> and USE it while they are here.

Nice. Now, can you answer my question? I'm not calling you names. I'm asking you a question. *A* *single* question, which you refuse to answer. I am wondering why I even bother wasting keystrokes asking it.

Cut to the chase. Answer the question, leave the politics out of it. One or two sentences is all that's needed. Why do you have such a boner about people listening to music you don't like, even if they are not listening in a manner that is intrusive to others?

the fire this time special tues march 18 12-3 pm EST

this tuesday, march 18 from 12-3 pm on wcbn there will be a feature on the album "the fire this time," an audio documentary on the gulf war that features an electronic music soundtrack (featuring orbital, aphex twin, etc.), a multitude of field recordings and other audio sources (speeches, interviews, news broadcasts) and commentary on us relations with iraq. the cd documents the circumstances around the first gulf war and its aftermath, focusing on the mainstream media's portrayal of the war.

the show will feature a lengthy interview with grant wakefield, who produced the documentary, and deals with the current impending war with iraq and the international peace movement that has emerged in response to it.  there will also be other music and audio dealing with iraq and the anti-war movement.

the cd will be released domestically on march 18 and is available at www.firethistime.org which also features a complete transcript of the cd and a multitude of other related information.

tune in to wcbn at 88.3 fm or wcbn.org on tuesday march 18 from 12-3 pm EST

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

As much as I would like to do a whole dissertation, let me provide the simple response:

In every wave of immigrating where the immigrants were not born English speakers, it takes a generation to become bilingual. The original immigrants, in their vast and extreme majority, never become proficient in English. While they may be somewhat functional, they are not bilingual or assimilated. The first generation is bilingual and multicultural; the second generation is usually pretty assimilated.

Learning a language as an adult is extremely hard for most humans. Language learning ability is impaired upon entering adolescence, and pretty limited by adulthood.

Anecdote: New York had an Italian language station more than 50 years after the last significant immigration of Italians to the USA; Chicago still has 5 or 6 stations fulltime or part-time in Polish.

In the Four Corners area, there are several all-Navajo stations. And the Navajos have been here longer than the rest of us.

There is nothing wrong with being bilingual or a polyglot. In fact, it improves cogitative skills and the ability to reason.

Don't tell them that or you'll find them off to buy every CD these groups ever made. Kids love to irritate their parents. If I were you, I'd tell them you hate Kenny G and would never allow such pablum in your home. Their Kenny G collection will bloom.

If they talk about getting something pierced all you have to do is say that's a great idea and offer to go with them for a piercing of your own. You'll quickly find them filling existing piercing holes with super glue.

You're so much fun to irritate that I only regret I'm not one of your kids.

Rich

You don't have much of a sense of humor, do you? Or political awareness,
either.

Puerto Rico has had non-binding referendums now four times do determine if
it becomes state #51.

In the pecking order, it's chances are considerably better than those of Iraq.

I do have to ask: what is "McFly" a reference to? Some TV show?

Learning English as a second language is supposedly much harder. I know (well, used to know :) Hebrew and French, and I am going to be taking Spanish classes in a few months. None of those languages has the large number of exceptions to common rules that English has.

To me, , 53 to late 50's. Remember, top 40 existed before rock n roll. KOWH in Omaha had 30 shares in 1953 with their Top 40 format (ref; Sept 1953 editions of Broadcasting Magazine).

Biff, the villain in the _Back to the Future_ movies, used to pick on
George McFly (Marty McFly's dad; Marty was played by Michael J. Fox
and George by Crispin Glover).

Some maintain that English at a basic level is easy; speaking it to
perfection is impossible for even native speakers.

Good luck with the Spanish classes. If you do well, you can watch the soaps
on Univision.

Hmm. I am culturally deprived. Or depraved.

Pitfalls in English for second-language speakers include idioms and syntax. This is frequently observed by native English speakers who drop in on English classes in foreign countries. No matter how up-to-date the institution teaching the classes, their use of idioms is almost always hopelessly out of date.

This contributes to the "Engrish" phenomenon: hilarious misapplication of English grammar rules combined with distorted colloquial diction, frequently seen in Japan...but visible throughout the non-English-speaking world.

-----------------

Not the way Bush wants to go about things in Iraq!  That's what I'm getting at.
If he wants to kick out Hussein's regime - can statehood be far behind?

Good move!  Country music fans are well known for their patriotism and high rates of military service histories.  What the DC's did in London was an incside to Texas, the Commander-in-Chief and all those that have or are serving.  Did they have the right to say it?  Yes.  The same way radio and the fans have a right to toss their CD's away.  The backtracking the DC's are trying to do now is disgraceful and shows just how vapid and shallow they really are.  Let them take the fall and pay the price for now.  Country music fans are also good people with forgiving souls.  Maybe the DC's should cut short their money grubbing tour of Europe and do some free shows for the men and women proudly serving around the world on ships, military bases and foreward areas in the Middle East,  Let them look at those faces and see how it makes them feel.  Let them see who really deserve hero worship and

allegience.  These young people that willingly put themselves in harms
way, far from their families and friends, risking death itself so that
others that live under the oppressive thumb of an arrogant and
murderous dictator can breath free.

I'm not surprised, talk about NOT knowing your audience.  Though they did do
a good rendition of that Stevie Nicks song.  Me thinks there may be a
re-invention in the works.

I am almost done developing software that keeps records for radio
stations such as: How many times songs get played, statistics on
individual songs, records of old play lists, and much more...

Interested?

If you have any questions or comments, please ask.

I was under the impression that the military was fighting for all the
good things the US stands for. One of which is freedom of speech.
Doesn't it make their efforts less valiant when we then censor those
who exercise the rights these men and women fought for? A real patriot
would fight to keep them on the air.

We could do what Saddam would do and execute them.

I absolutely agree. It must also be said that speaking one's mind
carries consequences. One is perfectly entitled to walk up to his boss
and tell him what he thinks, but he also has to be prepared to join the
unemployment lines.

Same with entertainment types. Their job is to entertain the public.
Also, they have every right to speak their minds. What they don't get is
the guarantee that they will be immune from reaction from either those
providing them with a microphone or those who are entertained. If fans
turn against a performer for his views, that is a consequence the

performer will have to bear. If that impacts his marketability, then he may also have to endure having his platform removed as well.

We all have the right to speak out in this country, but none of us (performers included) is guaranteed access to a printing press or a recording or network microphone.

> We could do what Saddam would do and execute them.

That is a bit extreme. I think losing one's job-related podium might be sufficient.

Joe McCarthy had the solution.  No censorship, just an invitation to appear
at the highly publicized un-American Activities Committee hearings. A number
of people found other lines of employment.

What a dumb, knee-jerk reaction. I admired the Dixie Chicks for saying what they believed. Fans who don't agree and want to stop buying their songs are certainly welcome. But for a station or network to ban their songs denies those who agree with the Dixie Chicks, or those who don't care what they said, the enjoyment of their songs.

This is not what America is about.

Amateur Radio Newsline™ Report 1333 – February 28, 2003

Amateur Radio Newsline™ report number 1333 with a release date of Friday, February 28 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. An amazing feat. Alaska to the United Kingdom using one watt on 136 Khz. Find out who did it and how on Amateur Radio Newsline™ report number 1333 coming your way right now.

(Billboard Cart Here)

**

RADIO RECORDS: UK TO ALASKA ON 136 KHZ

Reaching Alaska from the United Kingdom using just one watt ERP is quite a feat for any band, but Laurie Mayhead, G3AQC, has just achieved this on the 136 kHz band. And in doing so he has set a new record. RSGB Newsreader Jeramy Boot, G4NJH, has the story:

--

In the early hours of the 15th of February he transmitted to KL1X in Anchorage, and just before UK dawn at 0615 his callsign was clearly identified. G3AQC was using QRSS - very slow CW - with a 60-second dot period. The distance was 7278 kilometres, a record for one watt ERP on 136kHz.

Last year G3AQC became the first person to cross the Atlantic on the 73kHz band. KL1X is perhaps better known to UK amateurs as Laurence Howell, GM4DMA. Laurence said, "What is more surprising than the distance is that the path is notoriously poor between south-east Alaska, on the east coast of the Pacific, and Europe.

The signal would theoretically go on a great circle route to nearly 80 degrees north, over the northern Canadian Arctic, northern Greenland, east of Iceland, Glasgow, then over the UK to the South Coast - across and through the Auroral oval. There are some thoughts that the actual path might have gone round or even under the Auroral zone as no Auroral Doppler was seen on the received signal."

--

A lot of research and preparation work was carried out by G3NYK, G3LDO, W3EEE and W4DEX. This pre-planning is probably in good part responsible for helping to set this new work 136 kHz record. (GB2RS)

**

ON THE AIR: THE 5 MHZ EXPERIMENT - AN UPDATE

Also from the United Kingdom comes word that progress is being made with the analysis and future direction of the 5 MHz band experiment. This, following a meeting between members of the 5 MHz Working Group and experts from the Rutherford Appleton Laboratory. As a result, work is now under way to convert contact logs to a computer readable form with analysis results by April.

The meeting also looked a the fundamentals of the 5 MHZ experiment and came up with a number of suggestions of ways of improving how it should be conducted in the future. These ideas will require further development and consideration by the full 5 MHZ Experiment Working Group. It is hoped that this experiment and others conducted around the world could eventually lead to a new ham radio band. (RSGB)

RADIO RULES: ARRL CONCERNED ON PROPOSED 70CM CHANGES

Back on this side of the Atlantic the ARRL says that its concerned about two FCC proposed actions. Its says that both could negatively affect Amateur Radio and it has made its position known in comments filed to the FCC.

Of the two proposals, the one with greatest impact comes from the National Telecommunications and Information Administration. It would greatly increase the geographical area in New Mexico and western Texas where amateurs in the 70 cm band would be limited to 50 Watts peak envelope power to protect military radiolocation operations.

The ARRL says that there are 67 Amateur repeater in the proposed area. It says that most of these are far beyond line-of-sight paths to any military facilities. So the League has asked the FCC and NTIA to cooperatively evaluate the proposed restrictionton to determine whether it is overly broad. The ARRL adds that weak-signal operations in the region could also affected.

The other propsal comes from the National Weather Service. It wants to deploy wind-profiler radars in the 448 to 450 MHz segment of the 70 centimeter band. Here, the League says that it understands that the National Weather Service would notify ARRL of their locations as selected. The League notes that amateur repeaters are incumbent in the band at this time. It suggests that the National Weather Service select sites that minimize the effect on repeaters in that part of the band. (ARRL)

ENFORCEMENT: HAM TURNS IN LICENSE FOR RUNNING UNLICENSED BROADCAST STATION

A Berkley Michigan ham radio operator has turned in his ticket after the FCC finds he has operated an unlicensed radio station. The Commission’s Daryl Duckworth, NNZ0W, explains:

--
Duckworth: “The Enforcement Bureau has issued a Notice to Thomas Brothers KI8BE, acknowledging the cancellation of his amateur license as a result of a

finding by the Detroit office that he operated an unlicensed FM station.”
--

The action rescinding Brother’s ham radio license is the result of monitoring and direction finding by the Detroit Field Office. It established that Brothers operated an unlicensed FM radio station from his home in 2001. In addition to canceling his current ham radio license the Commission is prohibiting Brothers from applying for a new one until December 5th, 2007.
(FCC. RAIN)

**

ENFORCEMENT: STILL MORE FINES

Hams are not the only ones feeling the sting of Uncle Sam. In fact, the FCC is continuing its enforcement activities in all of the services it oversees. Roy Neal, K6DUE, has the details on what they are doing outside of the world of Amateur Radio:

--
The CGC Communicator reports that a$ 5,000 Notice of Apparent Liability -- better known as a fine -- has been issued to an AM radio station. This, for failing to maintain a record of the its efficiency factor that is used to determine its actual operating power. The station was also dinged for operating in excess of 105% of its authorized power,

Another A-M broadcast station has been socked for $10,000. This, for failing to register its antenna structure and failing to maintain a presence at its main studio during its normal business hours.

But the big one -- a fine of $20,000 went to a company for operation of radio transmission equipment without the required Commission authorization. It was also cited for use of a radio frequency device that failed to comply with Commission regulations.

This is just a sample of the non-ham radio enforcement the regulatory agency has been involved with. In all, its been a pretty busy time for the protecxtors of the airwaves at the FCC.

For the Amateur Radio Newsline™, I’m Roy Neal, K6DUE.
--

The details on all of these actions are on the FCC’s website. You can read the details at
http://www.fcc.gov/Daily_Releases/Daily_Digest/2003/dd030206.html (CGC Communicator, FCC)

**

ENFORCEMENT: UK MAN CONVICTED OF SELLING ILLEGAL CCTV GEAR

Meantime, across the Atlantic a British electronics supplier has been convicted of selling Closed Circuit TV transmitters that operated illegally in an amateur radio band. According to Jim Merachen, ZL2BHF, the British might say what he did just isn’t cricket.

--

The United Kingdom’s Radiocommunications Agency says that David Burrows plead guilty on February 10th in Newark Magistrates' Court to two charges of selling non compliant radio apparatus. The prosecution by the Radiocommunications Agency followed a complaint about interference from a licensed U-K radio amateur in May 2002.

The source of the interference was identified as an illegal Closed Circuit TV transmitter installed at a farm in Lincolnshire. The Radiocommunications Agency says that the tranasmitters had been bought from David Burrows's company valled A-E-R-C.

Inspectors searched the company's premises last July. At that time they seized a number of television transmission modules capable of illegal operation on amateur frequencies. The company website had claimed the surveillance equipment was exempt from the need to obtain a U- K licence.

Burrows, of Newark England, was sentenced to serve 60 hours of community service and ordered to pay 300 Pounds in court costs. Also, the equipment seized from Burrows business was ordered forfeitted to the government.

For the Amateur Radio Newsline™, I’m Jim Meachen, ZL2BHF.

--

It appears as if the Radiocommunications Agency may be using the Burrows case to send a message to others thinking of selling similar equipment by calling it ham radio gear. (GB2RS)

**

RADIO LAW: NY STATE HAMS TRY AGAIN TO GET ANTENNA PREEMPTION

For the third year in a row, Amateur Radio antenna legislation has been introduced in the New York Legislature. If approved and signed by Governor George Pataki, it would prevent passage of any zoning ordinance that would prohibit or -- effectively prohibit -- the construction of an antenna support structure by a federally licensed Amateur Radio operator.

But theres more. The ARRL Letter says that municipal ordinances in New York State that impact the placement, screening or height of antenna support structures would have to reasonably accommodate amateur radio antennas and impose the minimum regulation necessary. It would also prohibit municipalities from passing laws or ordinances to restrict antenna support structure height to less than 95 feet above ground level or restrict the number of antenna support structures. The legislation also would require municipalities to adhere to the provisions of PRB-1.

Last year's bill passed in the State Senate but died in the Assembly's Rules Committee. (ARRL)

**

THE WAR AGASINST TERRORIOSM:  FREE EMERGENCY NOTIFICATION ALERTS

Even though the government says that it may downgrade the national terrorism alert back to Code Yellow, the Emergency E-mail & Wireless Network says that it is increasing its efforts to encourage everyone to sign up for its free Homeland Security notices.  This  by e-mail and wireless device. You can sign up for the messaging notifications at www.emergencyemail.org

The Emergency E-mail & Wireless Network is the largest public service notification network and a provider of e-mail notification and wireless messaging services to government, the private sector and non-profit organizations.  The organization serves over 3160 local areas in all 50 U. S. States.  Its website is located in cyberspace  at www.911message.com.  (EEWN)

**

THE WAR ON TERROR:  THE FIRST RESPONDER

The latest terror alert has law enforcement agencies on guard and preparing for the worst.  And after September 11, 2001, emergency crews are better prepared for disasters, thanks to new technology.  Amateur Radio Newsline's Bruce Tennant, K6PZW, tells us about First Responder:

--

One major problem on September 11th 2001 was communications between emergency crews.  Most could not talk to one another because they were all using different types of radios, in different services and on different frequencies. In fact, the only group with common communications channels in the days immediately following the 911 terror attacks were the ham radio operators who had their own gear and volunteered to assist.

But that all could soon change thanks to a a new mobile command center built into a Sports UtilityVehicle and dubbed First Responder by its designer Raytheon.

While the exact information on how it works has not been made public, First Responder is designed to allow emergency crews to communicate on the same radio channel anywhere, anytime - even if phone and power lines are down.  In addition to normal two-way radios, the design includes satellite phones, a mapping system, hacker-proof computers and infrared cameras.  Just about any type of communications you can imagine except for ham radio and C-B.

Raytheon says that it developed First Responder to improve homeland security. It will also soon be equipped to detect biological and chemical agents as well as providing inter-service communications.

For the Amateur Radio Newsline™, I'm bruce Tennant, K6PZW, reporting.

--

According to news reports, the first, First Responder is already in use in the

Los Angeles California area, but more of these S-U-V's may soon be seen nationwide. This, thanks to new federal legislation that could release billions of dollars in Homeland Security funding. (Published news reports)

**

WITH THE HANDI HAMS: A-R-T FOR THE BLIND

A descriptive audio version of the new ARRL video "Amateur Radio Today" will soon be available for the visually impaired from the Handi Hams. According to Pat Tice, WA0TDA, the ARRL has agreed to let the Handi Hamd reproduce a special version of the show in audio for its members with disabilities who cannot use regular video.

Tice says that the audio only version will contain added dialogue to describe the action that would be on-screen in the original version. No date for when this special version of Amateur Radio Today will be available, but you will have to be a Handi Hams member to be eligable to receive a copy. You can join by calling the toll free Hamdi Ham membership line at 1-866-HANDIHAM. For those who perfer numbers, thats 1-866-426-3442. (HandiHams)

COLUMBIA DISASTER: NASA SEEKS HELP FROM SKY WATCHERS

NASA is still seeking help from the American public to supply video and still images of the Space Shuttle Columbia on its return flight to Earth. The agency says that while there has been a great public response, more material will help the investigation of the Columbia accident.

Anyone who may have video or stills of Columbia's entry path are encouraged to send it to investigators. You can mail videotapes to the NASA Johnson Space Center, Mail Code JA17, 2101 NASA Road 1, Houston, Texas 77058. Email digital images to columbiaimages@nasa.gov

NASA adds that videotapes and photos can be returned upon request and the materials will not be released to the media without the submitter's permission. For more information call the Johnson Space Center Emergency Operations Center at area code 281-483-3388. (NASA)

**

VOLUNTEER NEEDED:  AMSAT SATELLITE REPORT NEEDS NEW EDITOR

AMSAT says that it s looking for a new Editor for its Weekly Satellite Report. If you are interested in volunteering to help your fellow satellite operators stay abreast of the latest status of the ham-sats, please e-mail n1jez@amsat.org  (AMSAT-NA)

**

CONVENTIONS AND HAMFESTS:  CHARLESTON W VA IN MARCH

Between 600 and 700 Amateur Radio Operators are expected to gather on Saturday, March 15th, for the 19th Annual Charleston Area Hamfest and Computer Show.  The venue for this one is the Coonskin Armory, on Coonskin Drive in Charleston. The event is a giant flea market of new and used amateur radio, computer and related gear.

Representatives of Governor Bob Wise will be present, along with people the Board of Public Works.  Also, the states Office of Emergency Services will have their Mobile Command Center on display.  And for those want to get into the hobby or upgrade, ham radio testing will be availabe.

The Charleston Area Hamfest, which is open to the public draws attendees from West Virginia, Ohio, and Kentucky.  It runs from 9 AM to 3 PM with an entry fee of only $5.00.  For more information on the Charleston Hamfest, e-mail n8tmw@arrl.net or call  304-965-5349 during normal business hours Eastern time. (N8TMW)

**

INTERNATIONAL – BAHAMAS: 6 METER BEACON MOVED

On the international scene, Steve Rutlidge reports that his C6AFP beacon is back on the air from grid square FL16.  The beacon, which operates on 50. 062 MHz was moved from Great Abaco Island to Green Turtle Cay.  The distance is about five miles and the grid square in the same.  The beacon is now operating from the home of C6AGN.  (VHF Reflector)

**

INTERNATIONAL – FINLAND:  BEACON STOLEN

Users of the five-band Northern California D-X Foundation beacon network may have noticed the absence in recent weeks of transmissions from the Finnish OH2B beacon.  The reason?  The transmitter hass been stolen.  The good news -- the beacon is expected to resume transmissions in the European spring.  No other transmitters in the word-wide NCDXF beacon string have been affected.  (RSGB)

**

INTERNATIONAL - SINGAPORE:  NEW FREQUENCIES FOR HAMS

And word that Singapore’s telecommunications regulators have approved several UHF spot frequencies for Amateurs to operate. They are 433.425 , 433.450 and 438.450 MHz, and a maximum of 5 watts effective radiated is permitted.
(Q-News)

**

DX

In D-X, Q-News reports that the Air Force has closed down Johnston Island and demolition will start shortly on the remaining buildings. There will be probably DXpeditions to the island later but not under the call of KJ6BZ. The good news is that the history of the Johnston Island Amateur Radio Club will be held in the Air Force archives. (Q-News)

The ARRL DXCC Desk has announced that the VKZ0MQI Macquairie Island operation from January 1, 2002 through March 15, 2003 has been authorized for DXCC credit. Also approved the 3C2MV Equatorial Guinea DXpedition from November 11 through December 12, 2002. (ARRL)

**

THAT FINAL ITEM: HAPPY RETIREMENT TO N6AWE

Before we go, a word of congratulations to Amateur Radio Newsline’s own Mert Garlick, N6AWE, on his retirement from Fox Television’s KTTV in Los Angeles. Mert started with the station back in October of 1966 when it was still a part of Metromedia. Over the years he has done every job a broadcast engineer can perform at a television station. From manning the transmitter atop Mt. Wilson to microwaving signals back from the scene of a breaking news story to covering the annual Tournament of Roses Parade in Pasadena -- Mert Garlick, N6AWE, has done it all -- and a lot more.

Now its time for him to travel other roads and Mert tells us that retirement will not really slow him down. Instead it will give him a lot more time to pursue his other interests which include genealogy and of coarse Amateur Radio. And you will still be hesrsring him regularly, right here, on these weekly Amateur Radio Newsline reports.

So before we sign off, please join us in wishing one of the nicest people in ham radio -- Mert Garlick, N6AWE -- many happy and fulfilling years of retirement. And don’t be surprised if you run into him more regularly on the air. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's™ only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Norm Seeley, KI7UP, saying 73 and we thank you for listening." Amateur Radio Newsline™ is Copyright 2002. All rights reserved.

For sale:

The "Radio Crazy" is back!

Partial ownership of AM radio station in West Virginia next to the Ohio border.

Home included in the sale with a basement. This serves as the studios. Transmitter site is leased and is adjacent at $350.00 per month. The home has been appraised at a value of at least $52,000. Almost the asking price for the station! This is the only AM station in the community and the FM is moving out.

Daytimer, 1 KW with 500 watt PSA and some night power sufficient to cover city of license.

Active or inactive investors for our joint venture with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

Please, no "AM bashers" or "negative nabobs"!!

Full disclosure only to those completely identifying
themselves.

The "Radio Crazy" is a semi-retired broadcast engineer
and a ham since 1950. Not THAT crazy! HI!

Tel: (478)741-1710.

Last but not least. I am NOT a broker, agent, shill or
owner in any way of this station. In other words, I
have "no ax to grind" !!!

73,

Meyer Gottesman, W6GIV
Macon, GA
aka "The Radio Crazy"  aka "Meyer, the animal".

If you are the owner of a small AM or FM, you know how it is to be on a budget! We give you an alternative. Whether its an ID, sweeper, show billboard, regular production, or anything, we give exactly what you want.....at a very reasonable price! From one ID, to a monthly package. No job is too small or large!! 27 years in the business. Let us work for you. More information at: hendersonville@mchsi.com    and thanks.

If you can't get hold of the BA1404 and live in the UK or Ireland, check out this reliable source for the hard to find BA1404 IC's.  You may get some advice about 38khz Crystals also if you ask nicely.

HEY.

True AM believer here.

Proven winner.

Making $$$ in AM NOW.

Ready to retire and looking for a project.

Are you taking my $$$ or on the level??? Previous people who have dealt with you tell me you are questionable. You got a position...???

How about Details, Background, Requirements???

The Winner...

The only time 'NEW-FM had ratings was in 1985 - when they were the only game in town. That was a very self-serving piece - but I'm into reading self-serving pieces.

Larry and I have posted back and forth in other newsgroups, but I believe he's new here. ("Here" being rec.radio.broadcasting, which I moderate.)

I think his problem is that he's not aware of what's typically posted here. In the spirit of the late Bill Pfeiffer (the original moderator of RRB) I try to let as much through to the newsgroup as possible. Stuff that's obviously flamebait or off-topic isn't passed through, and stuff that's obviously spam isn't passed through, but this post from Mr. Holt wasn't spam as far as I'm concerned. FS/FA posts are okay too, though I am pretty strict on what I'll allow to get by me.

It's my fault. I've been meaning to post an RRB charter for the regulars to review and critique. It's been on my To-Do list just this side of forever.

Dear Mr. Cheese: (LOL!)

Thanks for your interest. I am not a crook. Richard Nixon once said that too! (grin!) Actually I am a semi-retired broadcast engineer. I am not an agent, broker, shill, owner or part owner of said station!

I am in WV now visiting with the owner and have seen the station. It is very nice with excellent coverage for the power. It has a 24 hour license tho the night power is lowered from 1 KW to 20 watts. Enuff to cover city of license, however.

Please call me if you wish. (478)741-1710. I will be
back to my apt. in Macon, GA Sat. AM so anytime after,
say, 6 PM Sat. will do.

I do want to participate so if you intend to only buy
100 percent or nothing at all, it is nothing at all,
with all due respect.

Cordially,

Meyer Gottesman

1985?  By then their influence was probably waning.  Their impact was
in the late 1960s and 1970s.

He has stated several times that if you are a serious investor, such
information will be provided via email, but just posting jabs on the NG will
result in nothing.  I'd be willing to bet that if you emailed Meyer as a
serious investor, he would quickly and willingly answer any and all of your
questions.

I said, regarding Larry's post

>> It's my fault. I've been meaning to post an RRB charter for the
>> regulars to review and critique. It's been on my To-Do list just this
>> side of forever.

Steve Holt replied

> OK, no probs. BTW is there a FAQ for this group?

Ummmm... No. :>

The reason is because the vast majority of people who post at all are regulars. I could cook something up and post it along with the charter.

I accept that he is looking for protection with regard to his business plans.  NO PROBLEM.

HOWEVER, this is a legitimate question. Certainly we should not expect our moderator to investigate his past. Ditto we should have an idea of who he is. I suspect there is a fair amount of resources on this group. Some which MAY be inclined to chase a few of this guy's proposals. (Otherwise he would not be here.)

I know he was involved in the Blue Lake CA AM construction permit and I see it was sold for a tidy profit. So all can not be bad. Anyone (Especially you) have any other details? I know there were offerings in Missouri, Pennsylvania, Oklahoma and Kentucky ( I think).

'Da Cheese.

Phat Beats Radio is on the air just for spring break.  Playin Rap
Hiphop R&B & Techno.  Anybody elese goin to be on during spring break.
 Looking for a use fm amp that only needs 4 to 5 watt to drive it from
150 to 300 watts under $500.  This msg is form a station that is part

of the RPM Radio Network stay tuned for more info.

Prior to 1985, there was at least one other rock station with a City grade
signal.
Over the years the swinging door consisted of stations such as WOR-FM,
WPIX-FM, WPLJ, WQIV, and WAPP.
WXRK debut the day of Live-Aid in July 1985. But there was about 6 months
before that WNEW -FM was the only rock station in town.
The idea was that Metromedia cared more about the AM and TV stations and
paging systems during that time as FM, in NYC, was not as popular.

quickly and willingly answer any and all of your questions.
>>

Or even a serious (and courteous) inquirer, not necessarily as a serious
investor.

Besides, a little sleuthing on one's part will usually turn up the precise identity of the property which Meyer was referring to in the abstract.

If "Mr. Cheese" would ID himself with his "real" email
address I would be glad to discuss the AM station
joint venture with him.

The station is WMOV, Ravenswood, WV.

For sale:

Part interest in AM radio station for sale. Joint venture. WMOV radio, Ravenswood, WV next to the Ohio border. Only station in county. 1360 KHz, non-directional. 1 KW days, 500 watts PSA and 20 watts at night. Covers city of license at night.

Real estate IS included. Home, aprox. 100 ft. tower and 4 "dishes". Two 1 KW xmtrs (Gates) tube type and one 30 watt LPB solid state night transmitter set at 20 watts nominal output. PC automation. Tower site is adjacent and leased at $350.00 per month.

Active or inactive investors with at least $10,000 each are welcome. PLEASE! No "AM bashers" or negative nabobs. (I don't know what a "nabob" is either! HI!)

I am not a crook! I am also NOT an agent, broker, shill, owner or part owner of WMOV. I am a semi-retired broadcast engineer and Advanced class ham. Last job in radio (2001) was Chief Engineer for a 5 KW fulltime AM in New York City. Does that make me "Diplomat with Portfolio" ? Maybe.

Those who still think I am a crook need know that in 1972 I worked for the US Dept. of Defense as a civilian and held a secret level security clearance. I have worked for two major airlines. (PanAm in 1960 and TWA in 1968). 'nuff said?

I was the past President and founder of non-commercial KPOO FM, San Francisco, CA. It is on the air since 1973. Probably the zaniest non-comm FM in America!

My BIO was listed in "Who's Who in Entertainment".

Tel: (478)741-1710 in Macon, GA.

PLEASE DO NOT contact WMOV directly!! The seller will not allow you to do an "end run" and I would not want to deal anyway with those with such a glaring lack of ethics and fair play!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"  aka "Meyer, the animal"

Amateur Radio Newsline™ Report 1334 – March 7, 2003

Amateur Radio Newsline report number 1334 with a release date of Friday, March 7 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A national ham radio socierty on the brink of faiulure and how ham radio will survive in space while the shuttles are grounded. These stories are first on Amateur Radio Newsline report number 1334 coming your way right now.

(Billboard Cart Here)

**

## INTERNATIONAL: COLOMBIAS NATIONAL AMATEUR RADIO SOCIETY SAVED BY A MIRACLE

Colombia’s national Amateur Radio Society has received a reprieve from extinction. At least a temporary one. We have this in-depth look at what happened and whats being done to save the L-C-R-A.

--

Colombia’s national ham radio society remains on the brink of being dissolved and you may soon hear very few of that nations hams on the air. This, according to Fred Laun, K3ZO in a report that originally appeared in a number of D-X newsletters. The reason? The economy.

According to Laun, his old friend Beto Rojas, HK3DDD, in Bogota informed him that postal rates in Colombia were doubled as of January 1st. That it now costs the equivalent of $2.00 U-S to send a letter to the United States. And as a result Colombian hams would have to pay the equivalent of 13 cents per QSL to send outgoing cards through the bureau.

That 13 cent fee would not be to bad except for the fact that the bureau probably won't be available much longer. This, because the Colombian I-A-R-U member society -- the Liga Colombiana de Radioaficionados -- L-C-R-A -- was to meet on Saturday, March 1st to dissolve itself. The problem is that L-C-R-A membership is down. It now only has 200 paid members. It also had the equivalent of 8000 United States dollars in debt. It’s leaders felt that it could no longer stay in business.

But says Laun, a miracle actually happened. At the meeting one of the members donated $7000 to pay off most of the current debt. So, L-C-R-A will continue to operate as Colombia’s national society for at least the next three months. During that time the leadership will try to figure out what went wrong and see if they can get the organization back on an even keel.

In a note to Amateur Radio Newsline, Laun says that several Colombian hams were apparently moved by the messages they received from around the world and have vowed to try to rescue their almost 70 year old society from the brink of oblivion. Even so, HK3DDD tells Laun that many Colombian hams have stopped calling C-Q and some have even terminated all high frequency operations. This is because they can no longer afford to handle the economic consequences of the demand for QSL cards.

Also says HK3DDD, some Colombian DXers who are still on the air are simply listening, searching and pouncing on rare ones these days. Instead of being the DX, they are selectively looking for new countries for themselves.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP .

--

The bottom line to all of this? H-K prefix hams may soon become very rare on the H-F ands and those whom you work may never be able to QSL. (K3ZO)

**

RADIO RULES: WRC-03 GETS US POSITION

The U. S. Department of State has forwarded several agenda items to Geneva as being this nations opening position at the 2003 World Radiocommunictions Conference. The most important of these relate to International Radio Regulation s-25 and its sub-parts. Included in the initial United States position is rewording S 25 subpart 1 to give member nations more authority to determine the points of communication of the amateur stations it has licensed. The suggested modifuication reads that administrators shall verify the technical and operational qualifications of any person wishing to operate an Amateur station.

The United States is also proposing to eliminate regulation 25.5. This is the rule that mandates Morse Code peoficiency examinations for all candidates for an Amateur license with high frequency operating priveleges. The United States says that its time to remove the Morse testing requirement and leave the decision as whether or not to test for code up to individual I-T-U mermber nations. (W5YI)

**

HAM RADIO IN SPACE: CREW OF 2 TO THE ISS

It will be a two man crew rather than a three man crew on the International Space Station until the U-S Space Shuttle flies again. But ham radio will remain on the air from the I-S-S as the investigation in the Columbia tragedy continues. Amateur Radio Newsline’s Roy Neal, K6DUE, has more:

--

NASA’S WORST NIGHTMARE BECAME REALITY WHEN AN ORBITTING SPACE SHUTTLE BLEW UP, KILLING ALL SEVEN ABOARD AND PUTTING UNITED STATES SPACE ACTIVITY OH HOLD FOR AN INDEFINITE FUTURE. NOW, OUT OF THE DEBRIS, INVESTIGATION AND SORROW, NASA HAS BEGUN TO REORGANIZE.

ADMINISTRATOR SEAN O’KEEFE HAS TOLD A CONGRESSIONAL PANEL THAT AN AGREEMENT HAS BEEN REACHED WITH THE INTERNATIONAL PARTNERS. THE INTERNATIONAL SPACE STATION WILL CONTINUE IN ORBIT FOR AT LEAST THE NEXT 18 MONTHS.

THE TWO ASTRONAUTS AND ONE COSMONAUT ON BOARD WILL BE BROUGHT BACK TO EARTH IN LATE APRIL OR EARLY MAY ABOARD THE SOYUZ SPACE SHIP THAT’S DOCKED AT THE STATION. THEY WILL BE REPLACED BY A NEW CREW OF ONLY 2 PEOPLE, ONE ASTRONAUT AND ONE COSMONAUT, PROBABLY ED LU AND YURI MALENCHENKO, WHO ARE NOW IN TRAINING

AT RUSSIA’S STAR CITY. THEY WILL KEEP THE STATION OPERATIONAL, EVE N PLAN TO TALK TO ONE OR TWO SCHOOLS ON EARTH EVERY WEEK. FUTURE CREWS WILL COPNSIST OF TWO PEOPLE FOR THE TIME BEING.

RUSSIAN PROGRESS SPACECRAFT WILL BE USED TO FERRY SUPPLIES, SOYUZ WILL CARRY PASSENGERS. ONCE NASA HAS FIGURED OUT WHAT CAUSED THE SHUTTLE COLUMBIA TO DISINTIGRATE, THEY HOPE TO FIX AND FLY THE THREE REMAINING SPACE SHUTTLES. THE BOEING COMPANY HAS BEEN ASKED TO GO TO WORK ON A NEW CARRIER TO AUGMENT THE SHUTTLE FLEET.

RUSSIA HAS AGREED TO ACCELERATE THE DELIVERY OF 2 PROGRESS RE-SUPPLY VEHICLES FOR A TOTAL FLEET OF FOUR THIS YEAR AND FIVE IN 2004 AND THERE IS TALK OF AUGMENTING THE SOYUZ FLEET.

EXISTING HAM RADIO EQUIPMENT ON BOARD SHOULD KEEP THE STATION ON THE AIR. OTHER EQUIPMENT MAY BE SENT UP IF NEEDED. THE SPACE AGENCIES HAVE COMMITED TO STAYING IN SPACE WHILE THEY MAP A FUTURE AND HAM RADIO IS AN INTEGRAL PART OF THAT ORBITING STATION.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE.

--

NASA says that having only two people aboard the I-S-S will help extend supplies while the shuttle fleet remains grounded. (NASA, ARNewsline™)

RESCUE RADIO: METRO-COMM AND THE NORTH-EAST BLIZZARD

A follow-up to our recent coverage of the severe weather that has blanketed the North-East in recent weeks. Steve Bromhead, KB2TRZ, reports that the Metro-Comm linked repeater system did yomens duty during last months blizzard.

According to Steve, their Snow Watch Net was activated for 42 consecutive hours handling storm related traffic for 12 counties in New York, New Jersey, Pennsylvania and Delaware. This included 10 formal messages to the National Weather Service office in My. Holly New Jersey.

Steve says that Metro-Comm is a linked repeater system covering Binginghamton, New York to Ocean City, New Jersey. The system has machines on 144, 220, 432, and 1296 MHz as well as a packet BBS. (KB2TRZ)

## THE VEC SYSTEM:  QPC RELEASES DRAFT GENERAL CLASS SYLLABUS

You have the answers.  They have the questions.  So says the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators.

The Q-P-C has just released a draft syllabus for the new Element 3 General class Question Pool.  This is the syllabus will be used when developing the new General class question  pool that will become effective July 1, 2004.

This draft syllabus is available for download at www.arrl.org/arrlvec/pools.html. The public is invited to comment on this syllabus, as well as to suggest questions for consideration in the next General Pool.

The Question Pool Committe says that all responses must be received prior to July 15, 2003. Please direct your comments to the following people:
Scotty Neustadter, W4WW, Chair QPC email: W4WW@arrl.net
Bart Jahnke, W9JJ, Member QPC email: vec@arrl.org
Fred Maia, W5YI, Member QPC email: w5yi@w5yi.org
John Johnston, W3BE, Member QPC email: johnston.john1@worldnet.att.net  (NCVEC)

**

## ENFORCEMENT:  NO RULES BROKEN

A ham accused of running a telephone call-in program on 75 meters has been cleared of any wrong doing.  Amateur Radio Newsline's Bruce Tennant, K6PZW has good news for one California ham:

--
Back on October 15, 2002, the FCC wrote to James S. Watkins, KI6GU, of Burbank California.  This, regarding complaints that his station was involved in a telephone call-in like program on 3.830 MHz on August 16th and 24th.

The complaints alleged that Watkins had operated the call-in show using reverse phone patch.  Copies were provided to him and the FCC requested additional information from Watkins in regard to that operation.

Watkins provided the requested information in a response dated last November 12th.  Following a thorough review the FCC now says that that there were no violations of Commission rules since licensed operators were in control of the station during all transmissions.  As a result the inquiry is closed and no enforcement action is deemed to be necessary.

For the Amateur Radio Newsline, I'm Bruce Tennant, K7PZW, in Los Angeles.

--

The FCC also thanked Watkins for what it termed as his quick reply and his cooperation.  (FCC)

**

## ENFORCEMENT:  WARNING LERTTER FOR ALLEGED KEY-DOWN

A Michigan ham has recieved a Warning Notice from the FCC.  This time the letter went to to George Albrecht, N8PGB, of Lansing , and says that the FCC is in posession of information alleging that Albrecht’s station was the source of deliberate interference to the W8LCC repeater system on 442.025 Mhz.

The notice says that the interference took the form of unidentified transmissions and keying down to cause sound effects from a link to 52.525 Mhz. In its note the FCC warned all Albrecht of the possibility of fines and revocation proceedings against him if the alleged problems continue.   (FCC)

**

## ENFORCEMENT:  NY CAR SERVICE FINED FOR UNLICENSED OPERATION

International Car Service, Inc. of Brooklyn, New York has been fined $10,000. This, for operating of unlicensed radio transmitters on  33.20 Mhz.

The original forfeiture order was issued on October 22, 2002 by the District Director of the Commission’s New York Field Office. International Car Service never filed a response to the N-A-L.  Based on the information before the Commission, the fine has been affirmed and International has been ordered to pay.  (FCC)

**

## ENFORCEMENT:  HACKER SENTENCED

A federal judge has ruled that a California man who quit his job to work for a competitor and used his old computer password to snoop on his former employer must pay $21,600 and serve five years probation.  The sentence comes after the San Dimas man pleaded guilty in September of 2002 to one count of illegally obtaining information from a protected computer

Until February of last year, the man reportedly worked for  a contractor specializing in large retail buildings.  After leaving that job to work for a competitor, the man admitted that he used a password to access its computer system more than 20 times.  (Published reports)

**

## FM AND REPEATERS:  REPEATERLINK.ORG WANTS YOU

Hams and repeater owner operators interested in connecting their system to another cirty or another nation now have a new resource.  Its in cyberspace at www.repeaterlink.org and once there you will find a growing list of who’se repeater is linked to where and how its being done.

repeaterlink.org is the work of Jim Willmore, KC9BIX. He says over several Internet remailers that his site is unique in that it lets you to search for repeater systems that connect two different cities together or linked systems that have repeater in a specific city. It also allows hams who own a repeater system to log in and maintain your own system information in real time.

According to Willmore, repeaterLink.org is totally independant and supported by the ham radio community. It does not buy data from the FCC or the ARRL, but rather relies on the architects and engineers who own the repeater networks to register their own systems.

Again, that site is www.repeaterlink.org. If you have any questions about the site, email Jim at kc9bix@repeaterlink.org (KC9BIX)

**

## HAM RADIO HONORS: NAB ENGINEERING ACHIEVEMENT AWARD WINNERS ANNOUNCED

The National Association of Broadcasters has honored a ham radio oprtator with one of its two, 2003 Engineering Achievement Awards for Radio and Television.

John Reiser, WQ4L, the retired Senior Broadcast Engineer of the FCC International Bureau, will receive the award for Radio. Robert Eckert, Branch Chief - Electromagnetic Compatibility Division, Technical Analysis Branch of the FCC's Office of Engineering and Technology, will receive the award for TV.

The Engineering Achievement Awards for Radio and Television will be presented at NAB's Technology Luncheon on April 9th. The NAB annual convention takes place April 5 - 10 at the Las Vegas Convention Center. The Amasteur Radio Reception is Wednesday April 9th from 6 to 8 P.M. right next door at the Las Vegas Hilton Hotel. The complete details are in cyberspace at www.nab.org/newsroom/pressrel/n2003/c2603.htm) (CGC)

**

## CONVENTIONS AND HAMFESTS: THE ZL TECHNOLOGY CONVENTION

No plans for this springs Easter holiday? Well think down-under as in Hamilton New Zealand because that’s where this years Technology Convention will take place. The dates are April 19th and 20th at the Hamilton Astronomical Society meeting facility.

This years Technology Convention will be hosted by the Hamilton Amateur Radio Club. Plans for the event call for presentations on such subjects as microwave equipment construction, homebrew test equipment, APRS, 10 GHz ATV, plus others state of the art Amateur radio disciplines. And if the weather permits, some viewing of the Southern Hemisphere’s night sky from the facility’s optical telescope may be included.

Want to find out more? You can write to the New Zealand Technology Convention 2003, PO Box 606 Hamilton New Zealand. Or better yet send an e-mail to Gavin Petrie at gavinwp@ihug.co.nz. (NZART)

**

HAMFESTS AND CONVENTIONS:  WEAK SIGNAL BANQUET IN DAYTON OHIO

Here in the United States tickets are now on sale for the 11th Weak Signal Banquet slated for on Friday night May 16th in Dayton Ohio.  This is one of the largest gatherings of V-H-F weak signal enthusiasts held anywhere in the United States and is timed to coincide with the Dayton Hamvention.  Cost is $35 per person and only 125 people can be accommodated.  For information and reservation information take your web browser to www.wa8wzg.com and click on Dayton Banquet 2003.  (WA8WZG)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

TRAVEL WARNING:  DX'ERS ADVISED TO USE CARRY-ON LUGGAGE ONLY

If you are planning a D-Xpedition, you might want to think in terms of smaller being better.  This following reports of vandalism to the luggage of a recent DXpedition by none other than those highly trained security folks at Seattle Washington's Sea-Tac Airport.  Amateur Radio Newsline's Jim Meachen, ZL2BHF,  in Auckland New Zealand reports on what happened to a bunch of DXpedition operators who were headed home:

--

When the D-Xpedition group returning from the recent AH3D operation reached Seattle for their connection to Copenhagen Denmark, all their Samsonite case's locks were been broken by the Sea-Tac Airport security people who just had to take a peek inside.  The checking was done in a secure area of the Seattle airport.  As most seasoned travelers know, security is supposed to find the passengers to get the keys to luggage that they want to inspect.  In this case security simply broke into them, resulting in damage to the luggage and some rather messy repacking.

As a  result of this experience, D-X'er Martti Laine, OH2BH, says he will be going hand carried from now on.  When he operates the ARRL SSB Contest from the Canary Islands as EA8BH it will be using the new Yaesu FT-897.  This is a radio that weighs in at only 8 and 1/2 pounds and can be toted along in the passanger cabin with him.

Laine says that EA8BH will be on the air on all bands using the new Yaesu radio. He adds that the QSL for this operation will feature information on this new, compact DXpedition, approach.

>From down-under I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

Several D-X publications quote Laine as saying that during these turbulent times it is advantageous to have all your equipment hand carried. He says that such rigs as the FT-897 and the FinnFet FF-1001 solid-state kilowatt will all fit into a small airline hand-carry bag. Laine adds that if you work him, QSL direct to OH2BH. (OPDX, others)

**

ON THE AIR: CELEBRATING THE FIRST NATIONAL WILDLIFE REFUGE

Meanwhile, closer to home, the Vero Beach Amateur Radio Club as announced a special evebt operation for March 15th and 16th. From 1400 to 2100 UTC both dats the club will operate station W4OT to celebrate the 100th Anniversary of the nation's first National Wildlife Refuge on Pelican Island. Suggested frequencies are 14.290, 21.360 and 28.390 Mhz. If you make contact QSL to P O Box 2082, Vero Beach Florida. The zipcode is 32961. (VBARC)

**

INTERNATIONAL - UK: THE RADIO COMMUNICATIONS FOUNDATION

The Radio Society of Great Britain has announced the launch of the Radio Communications Foundation. As envisioned. the new foundation will be used by the RSGB to channel all its work in the field of education and training. It will support the promotion of amateur radio to a wider audience in the U-K. The Foundation is being registered as a charity and will operate independently of the normal commercial activities of the RSGB. (GB2RS)

**

INTERNATIONAL - GERMANY: NOMINATIONS SOUGHT FOR THE HORKHEIMER PRIZE

The German national ham radio society -- the DARC -- is seeking nominations for the 3003 Horkheimer Prize. The award is named after Rudolf Horkheimer was one of the first radio amateurs in Germany. Its awarded annually by the DARC for contributions to amateur radio, its further development, and the goals of the society.

According to DARC, the prize can be awarded to one or more persons or institutions. Any member of an amateur radio society in the IARU is entitled to field a nomination and self-nominations are also allowed.

The 2003 prize will be awarded during the Ham Radio 2003 fair in Friedrichshafen. Nominations must be submitted by March 31st to DARC, Lindenallee 4, 34225 Baunatal, Germany. (GB2RS)

**

THE WORLD ABOVE 50 MHZ: QSOP PARTY HONOR ROLLS POSTED

Back here in the U-S-A, Tim Marek, K7XC, says over the W6YX VHF Reflector that the V-H-F Q-S-O Party Honor Rolls through September 2002 have been updated and posted to his website. The U-R-L is a bit complex to read, so look for them in the print edition of this week's Amateur Radio Newsline report. You can find it http://k7xc.tripod.com/VHF_Records/index.html (K7XC)

DX

In D-X word that G3TBK, is returning to work in St. Vincent and will be active again as J88DR until the 10th of April. He will be on all bands from 80 through 10 meters. mostly CW. There may also be a possibility of some operation on 160 metres if he can find sufficient space for an antenna. All QSLs go to G3TBK, either via the bureau or direct. (RSGB)

And FO5RK reports that he is planning to be active again from Rapa Island through March 20th. Rapa Island is located in the Australs group, which counts as a separate DXCC entity from French Polynesia. QSL this one as directed on the air. (OPDX)

THAT FINAL ITEM: W2NSD ADVISES ON THE WAR ON TERRORISM

And finally this week a word on how to win the War on Terrorism without firing very many shots. It comes in some advice from 73 Magazine's Wayne Green, W2NSD. And as we hear from Blair Alper, KA9SEQ, Green has some rather interesting albeit offbeat ideas -- all using radio:

--

Writing in his March editorial, the prolific W-2-Never-Die quotes a rather strange idea he says comes from Newsmax.com. Its a story recommending that Israel set up narrow passages at every checkpoint with sandbags to absorb any explosions. Then use UHF transmitters to detonate any explosives that a terrorist may be trying to sneak in. That says Green would get rid of a lot of suicide bombers in short order.

But Green takes it a lot futher. He suggests that the United States adopt a psychological approach to fighting terrorists. He says that we should set up a series of radio and television broadcasts in the Arabic language. He says that the programs would be made up of psychics supposedly interviewing dead suicide bombers who are screaming that they are roasting in hell and not enjoying the after-life that they were promised. The psychics would also claim that God is furious with them and has put a curse on their families.

Would it work? On this one we won't even venture a guess. But 73's Green does add this comment. He says that it is far better to outsmart enemies than to try to outfight them.  It’s cheaper, says W2NSD, and that it saves lives.

For the Amateur Radio Newsline, I’m Blair Alper, KA9SEQ.

--

Green also has some advice for the United States military on how not to fight a war with Iraq.  That one you really have to read for yourself.  You will find that information on page 4 of the March 2003 issue of 73.  (73 Magazine)

Cars 4 Christmas meets a Radio Station with Heart in Kansas City

In 1999 Radio station 99.7 KYYS was approached by Cars 4 Christmas founder Terry Franz, to help the Kansas City project grow and he was greeted with open arms. Cars 4 Christmas is a not for profit organization that provides free basic transportation to less fortunate individuals that are unable to obtain it on their own. Recipients have included a young mother with a 2 year old child with heart problems walking a hour in the cold morning to get to a bus stop to get the child to daycare and her to her job, A man caring for a premature baby on oxygen and a feeding tube that was riding the bus in a emergency to get his child to Childrens Mercy Hospital, and a disabled Desert Storm Veteran with his family living on disability and unable to afford a car to get to doctor appointments.

Morning show hosts Max, Tanna ,& Moffit putting their hearts in the project, asked listeners to donate vehicles and had people submit stories on why they or someone they knew needed a free vehicle. The vehicles donated were not the newest or fanciest vehicles but were checked to be mechanically sound and safety inspected by the Cars 4 Christmas organization. They read recipient stories daily on the air calling it the Twelve days of Christmas then called them to say they would receive a car on Christmas Eve morning. Listeners called and offered money for gas , insurance or whatever else might be needed. Some in tears after hearing the stories , unable to make a donation but calling to say how proud they were to be KY listeners.

Recipients didnt care how new the car was as it wasnt about winning a prize, it was about freedom, the freedom to get to the doctor, store or get to a job across town, get to town if you live in a rural area or live where public transportation is poor.  Since 1999 they have helped give over a hundred vehicles to people in the community and if you wonder if there is a need for such a project, they receive over 2000 requests a year in Kansas City alone.

I work with other radio stations but the key to our success as been the personal efforts of Max , Tanna, & Moffit , Franz stated at a recent interview. Some DJs think it is just a great radio promotion giving away cars at Christmas but they dont have the heart these guys do.

Franz added a story about Tanna Guthrie; Our Christmas eve give away was over and it was Jan 5th , Tanna called me and said she never does this but she saw a woman walking in the snow with groceries about 9:00 at night and stopped to offer her a ride. During the ride she learn the woman had recently gotten herself out of a homeless shelter and was living on disability income. She was hoping to save some money to get a vehicle so she could get out of the cold walking everywhere but mostly so she could visit her daughter and grandchildren about 40 miles away. Tanna called me late that night and asked if we could help this lady. A few days later we gave her a 1992 cavalier and she thought an angel had given her a ride and answered her prayers. There was no television cameras, mentions on the radio, or newpaper articles, and I dont think the lady knew Tanna was a radio personality but she is an angel. They do this because they know they are making a difference in the community. In fact, I have never mentioned this story to anyone until now Franz added.

A radio station with a heart does not say enough, if arbitron ratings measured DJs by what they did in the community these guys would go off the chart. Last Christmas Eve 25 area Car dealers , repair shops, parts stores, gas stations joined the program. Local TV stations joined the live remote with Max Floyd, Tanna Guthrie, and Larry Moffit, to pass out keys to the cars on live TV news shows. Truly a community effort, even local law enforcement was there to install donated child safety seats and listeners brought presents to put in the vehicles.

Cars 4 Christmas was also active in Junction City, Kansas and has hopes of expanding to Springfield, St. Louis and Columbia in 2003 and looking for more radio stations with a heart. For information see www.cars4christmas.org

It has happened here again in the northeast. NYC now has TWO hip-hop stations(97.1 & 105.1FM), FOUR "pop-40" stations(95.5, 100.3, 106.1 just east, on the Island, and the latest casualty, "Where rock once lived", FM102.7!!). New York is also served by TWO modern rocks(92.3 and 92.7 - again from the Island).

In contrast, New York is covered by ZERO country stations(the last, FM107.1, went Latino in 2001), and only ONE Classic Rock(104.3 - the ex-classical station).

How I'd love to go back in time the 70s-80s, and tell folks all this, that hip-hop actually is the mainstream of our culture. I'd probably either get shot or sent to Bellvue - but there it is, like it is.

Sad - what I'd do to be in a parking lot, ordering a burger and shake from an ENGLISH-speaking drive-up, and hear a rusty old CHEVY pickup - not some tricked out, farty sounding rice suckin' 92 Acura!! - blasting Van Halen(Lee Roth mind you), Bryan Adams, or some good ole' Zeppelin.

At least we can take comfort in the same old bigotry we had in the
70's and 80's.

Thanks, but I know this page.
But adding Dolby changes the signal path considerably.

Well, not much has changed there, apparently. Back in 1954, my father was doing field service for some military project at Sheppard AFB (near Wichita Falls). I remember the constant tornado watch/warnings. Back then, there weren't any crawls. They threw a slide up and announced it, interrupting the programs. The programs were also frequently interrupted with slides that read "Trouble on the Cable". They weren't talking about CATV, but rather the telephone lines that delivered the programs to the affiliates.

The rains? Yes, indeed. And don't forget the icky red mud. It was there I saw my first scorpion. While Texas gets its network programming in synchronization with the east coast, that is not enough to make me want to move...to Texas, anyway.

So you DO admit it exists, after all! Well, I suppose I could move to the east coast...but then I realized that I was enjoying shirt-sleve weather today (as usual). I guess I'll just have to keep sacrificing and suffering with network television on the forgotten coast.

Hello
I taped a radio show back in 1984 on cheap tape (yes heck there is such a thing as cheap tape) eg. Radio Shack Concertmate tape. NEVER archive using odd brand tapes!

19 years later (last week) I played it back and the tape had too much tension on one side and even when taken out of the case and respooled in another cassette it had a chipmunk effect every other second. It seemed to play smoothly despite the tension.

Is there an audio program that can eliminate this. I have CoolEdit but having to adjust tempo 1350 times (on a 45 min per side tape) is ridiculous if it can be done automatically.

Thanks
Ken

I do admit it exists. I've seen it. Delayed TV is your punishment for
shirtsleeve weather.

Hello!!

I�ve been looking for information about the kinds of radio audience measurement,
untill the moment i just have found the arbitron�s method.

I desperately need this info, becuase i�m doing a research of this subject to obtain my master degree. (any journal you can suggest me wold be great)

Any info would be useful

Thank You

Alesis wants $100 bucks for a schematic !!!!

Service manuals are $100 + shipping. You are also required to sign a non-disclosure agreement. Unfortunately, they are not available in PDF format. I only have Xeroxed copies.

Paul Lucia
-----Original Message-----
From: Paul Lucia [mailto:plucia@numark.com]

I wrote back and said something obscene
Well, unfortunately Sir, the sale of Service Manuals is directed towards
service centers who would be profiting on the repair of several units. For
someone who wants to repair a single unit, it is certainly not cost
effective.Which is why you should send the unit to a repair facility capable
of repairing your Studio 32.

Sorry for the inconvenience.

Get Real Paul
I dont know of any broadcast engineer
that would pay $100 for a service manual . or for that matter buy or
recommend that we buy any more of
that brand .  We could fill up the rack with a mackie mixer

There is no "height" limitation for your antenna, and 30 seconds of effort
on your part with any search engine is all you need to figure out the
maximum
LENGTH of your antenna, as well as the maximum driving power.  The Part 15
rules, easily accessible on the FCC website, explain all of this in detail,
assuming you're capable of digesting all that "hard legal talk".

The limitations on power and antenna construction are unlikely to result in

useful range of more than 1/2 mile.  But being the hardcore radio pirate
that
you are, you're probably not interested in strictly adhering to these rules.

#hamradio called.  They have a bucket of punctuation and a cluebat for you.

```

The Austrian government ceased financing "Radio Austria International" (ROI) at the end of 2001 and left it up to the discretion of the Austrian public broadcaster, the ORF, to provide an international service at its own expense. The ORF does not regard such a service as part of its core obligations and points to its own financial constraints.

European listeners' associations are making an appeal to the ORF's executive body, the "Stiftungsrat" or board of trustees, to ensure the continuation of ROI. At the same time the members of the Stiftungsrat were asked to make their decision public.

Letters were sent to every member of the board; you can read the text as well as the result of the poll on www.radio-portal.org  (links have been established on the English and German start pages).

Answers are expected to arrive not before next week, though.

Regards,

Willi Passmann, DJ6JZ
Editor ADDX Radio-Kurier

Amateur Radio Newsline™ Report 1331 - February 14, 2003

Amateur Radio Newsline report number 1331 with a release date of Friday, February 14 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The terrorism warning level goes up in the United States and ham radio operators should be prepared. The details on Amateur Radio Newsline report number 1331 coming your way right now.

(Billboard Cart Here)

**

THE WAR ON TERROR: NATION GOES COLOR ORANGE: HAMS SHOULD BE ALERT

Homeland Security Secretary Tom Ridge says every American must be vigilant. This as the Bush administration raises the nations terror alert from Code Yellow to Code Orange and says this represents the most significant warning since the Sept. 11, 2001 attacks. Among those best equipped to assist the nation in fighting terror are its ham radio operators. Amateur Radio Newsline's David Black, KB4KCH takes a look at how hams can prepare themselves and how they can help:

--

The government isn't minimizing the threat. Officials expects more attacks against the United States and its allies in coming days. The only thing they can't do is predict when and where an attack will occur.

Federal officials recommended that Americans should take basic disaster preparation steps. This includes maintaining a three day stockpile of food and water. They also recommended obtaining duct tape and plastic sheeting to seal a house in the event of a chemical or biological attack or disaster. They also say to have some sort of emergency radio receiver. One that can operate for days without being plugged into a power outlet is best. This will be the primary way the government talks to you should the unthinkable happen.

How can ham radio operators help? Start by making sure that your ham gear works. Especially your hand held and mobile radios. If you only have one battery pack for your H-T, go out and buy one or two more. Or even better, get a case that lets you use alkaline batteries that are widely available. If the power goes out, you can't recharge Ni-Cads or NiM-H cells. But you can operate for a number of hours with Alkaline batteries. So have several sets of these on hand -- at least enough to get you through 72 hours of non-stop operation.

If you are a trained communicator active with an ARES or other emergency communications group, be sure to let the chain of command know where you will be. Give them a list of phone numbers where you can be reached 24 hours a day -- 7 days a week. Better yet, get a pager and give its number only to the person who will be calling you. That way if that pager goes off, you know it's for real.

What about looking out for terrorism in your own community? Do it. Observe and report.

If you see something that looks out of the ordinary or suspicious, call the police. Remember that old adage about better to be safe than sorry. While it's not likely you'll encounter a real live terrorist cell, it's not out of the question, either. And that's where your radio, your local repeater and its autopatch come in.

Even if you don't own a cellular telephone, your hand held or mobile radio is your emergency lifeline. If you have access to an autopatch equipped repeater its a lot better than a cell phone. Cellular phones are known for not being reliable in many areas. With a ham repeater, if you can hear it, the chances are it will hear you. And even if there's no autopatch, another amateur can relay your message to authorities.

What about on the air? What are the chances that a terrorist cell might take to the airwaves on your favorite band? Not very likely but again not impossible, either. Terrorists tend to try to blend in with the background. Setting up a communications network on even an underutilized band like 6 meters would be like waiving a red flag in front of a bull. Hams are very protective of their spectrum and are not afraid to go after those on a band illegally.

It's far more likely that a terror group would set up shop on license free public frequencies than on 2 meter F-M or 20 meter sideband. And it's a pretty good guess that government monitors are keeping a close ear on F-R-S, MURS, Class D CB and the frequencies nearby to each service.

What if you hear something that seems suspicious? There are three letters to remember: F-B-I. The agency set up a website and dial-in tip line immediately following the September 11th attacks. Both are still in service.

The website U-R-L is www1.ifccfbi.gov and it puts you only a link away from filing a report. Just click on the words "Report Terrorist Activity."

And this word to hams who have never handled emergency communications. If you hear a net going on, don't break in to ask if you can help. The chances are that you cannot. You can do more good by listening and learning procedures. Better yet, go to the ARRL's website and sign up for one of their Emergency Communications Training Classes. With the stark new reality of terrorism on our homeland soil, it should be incumbent on every ham regardless of age or license class to become skilled in emergency communications techniques. It might be you who's called on to save a life.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, in Birmingham, Alabama.

--

The bottom line. As the Office of Homeland Security has said, every American must be vigilant. In retrospect, all of our lives could depend on it. Hams can sign up for emergency communications training at the ARRL website -- www.arrl.org. (ARNewsline™)

**

ENFORCEMENT: HAM FINED $12000 FOR MULTIPLE VIOLATIONS

A ham has been fined $12,000 for violation of the Amateur Service Rules. We have this report:.

--

Its one of the largest fines ever assessed for ham radio rules violations and its been handed to Scott E. Kamm, the license holder of amateur radio station N0UGN. And it comes after the Federal Communications Commission finds Kamm apparently responsible for causing intentional interference, broadcasting music and failing to identify with his station by its FCC assigned call.

Kamm's story goes back to December 9, 2002. In response to complaints of continuing interference on 146 point 31 MHz, an agent of the Commission's Kansas City Field Office began monitoring. At approximately 7:00 P.M., the agent observed a very strong signal on the frequency. It was reportedly made up of music, sound effects and unmodulated carriers. No station identification was transmitted. More important. These transmissions were interfering with existing communications that were in progress between other amateur stations.

Using radio direction finding the agent determined the source of these interfering signal to be Kamm's residence in near-by Waterbury, Nebraska. The FCC says that Kamm has two addresses that they know of. One in Sioux City, Iowa and the other in Waterbury where they traced the interference as coming from.

The scenario repeated itself a day later on December 10th. This time the agent entered the premises and inspected Kamm's station. The agent found an amateur radio transmitter capable of operating on 146.31 MHz but Kamm stated that no transmissions were made from his station. That he used the radio to receive only. Kamm also asserted that no one else operated the station.

But the FCC is not buying that story. It says that the Amateur Service Rules state that no ham shall willfully or maliciously interfere with -- or cause interference to -- any other radio communication or signal. Also amateur stations are prohibited from transmitting music using and that they must identify at the end of each communication or at least every 10 minutes.

And, based on the evidence before it, the FCC says that it finds that Scott E. Kamm did willfully and repeatedly violate the Amateur Service Rules by causing intentional interference, broadcasting music and failing to identify. He is being fined $7000 for the interference, $4000 for transmitting the music and $1000 for failing to identify.

In Blair Alper, KA9SEQ, reporting for the Amateur Radio Newsline.

--

Kamm was given the customary thirty days to pay up or file an appeal. (FCC)

Break 1

With studios in Los Angeles California, the United States of America, and with reporters around the globe, we are the Amateur Radio Newsline, heard on bulletin stations worldwide, including the Ole Virginia Hams Amateur Radio Club net serving Manassas Va.

(5 sec pause here)

**

ENFORCEMENT:  UNLICENSED RADIO BROADCASTER SENTENCED TO 18 MONTHS PROBATION

The FCC has announced that Benjamin Leroy Carter has been sentenced to 18 months probation.  This, following his conviction on seven counts of unlicensed radio operation.

The conviction and subsequent sentencing is the result of an investigation that began in February of 1999.  The Commission's Tampa Florida Office says that it received complaints from residents and broadcasters in the Orlando, Florida area of interference to the reception of licensed radio broadcast stations.  Carter, who also went by the name of Malik Copafeel Abdul, pled guilty to seven counts of unlicensed radio operation in November of 2002.  He also agreed to forfeit all equipment used in connection with the station.

The FCC says that 4 months of the sentence will be served as home confinement.  In addition, Carter will be required to perform 50 hours of community service.  Its all in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-231068A1.doc (FCC, CGC Communicator)

**

RESCUE RADIO:  NEW CLASS OF FIELD DAY STATION

Amateur Radio's premiere emergency preparedness operating event is changing.  This with word that the annual ARRL Field Day will gain another entry class for 2003.

Called Class F, these will be Amateur Radio stations which are set up and operate from emergency operations centers, or EOC's.  ARRL says that the change renews the emphasis of Field Day's 1933 origins as an emergency preparedness exercise as opposed to a routine contest.  (ARRL)

**

RESCUE RADIO:  A NEW CB SIDEBAND EMERGENCY CHANNEL

Doug Schwinn N0LAY, reports over the QRZ.com website that the Michiana Emergency Monitoring Group is promoting an iniative to have C-B  channel 39 designated as an additional frequency to be used and monitored during emergencies.  This in addition to the existing C-B channel 9.

The reason?  Schwinn, who also holds the call KDZ0430 says that he joined in the effort because of the mountainous region of Colorado where he lives.  He says that he would likely be heard using lower sideband on C-B Channel 39 than A-M on Channel 9 during an emergency situation.  He also notes that a spokesperson for the group stated in an article in Popular Communications that this is part of an effort to restore and legitimize the Citizen Band Service. (N0LAY via Internet)

**

RESCUE RADIO:  HAM RADIO ASSISTANCE IN COLUMBIA DEBRIS RECOVERY ENDS

Ham radio communications assistance in finding parts from the fallen space shuttle Columbia has wound down.  According to several Internet reports, February 12th was the last day hams were to be called out to provide communications in the recovery effort.

During the height of the recovery, activities being conducted over the W5NAC repeater in Nacogdoches Texas could be monitored using Echolink's EDU_NET conference.  Rick Hambly, W2GPS, says that there was a very active effort by RACES and SKYWARN to aid NASA and government agencies like the FBI with the identification, G-P-S location, cataloging and recovery of space shuttle Columbia components.

As previously reported, the Columbia was at 203,000 feet when it disintegrated plummeted back to Earth.  All seven Astronauts on board were killed.  Three of the 7 were licensed radio amateurs but no ham radio gear was carried on that ill-fated flight.  (VHF Reflector, W2GPS, others)

**

REMEMBERING COLUMBIA:  HAM CREATES ON-LINE MEMORIAL

A former Amateur Radio Newsline Young Ham of the Year ward recipient has created a lasting Internet tribute to the space shuttle Columbia.

The memorial website was created by Kevin Boudreaux, N5XMH, of Orlando Florida.  Boudreaux, who grew up just outside New Orleans was the recipient of our 1993 "Young Ham of the Year Award" for his organizing Amateur Radio emergency communications following a devastating hurricane.

Today Boudreaux is a Manager with the Hilton Hotels and a professional website designer.   He tells Amateur Radio Newsline that he was so personally touched by the Columbia tragedy that he created this memorial website to the shuttle and its crew.

The webpages he has created are filled with facts about the orbiter and its mission along with photos and short biographies of its STS-107 crew. Kevin also provides links to other Columbia memorial websites along with the complete statement of President George W. Bush when he sadly went on the air to let the world know that the Columbia was lost.

Kevin was only 14 when he went out to help his community in time of disaster.  He was 15 when he received the "Young Ham of the Year Award" and his dedication has never stopped.

You can view his web tribute to the fallen Columbia and its crew at www.sscolumbiamemorial.com or www.columbia7memorial.com (ARNewsline™)

**

RADIO LAW:  ALLEGED PAY TV INFO THIEF PLEADS NOT GUILTY

A 19-year-old University of Chicago student has pleaded not guuilty to federal charges of stealing plans for security systems used by satellite broadcaster Direc TV and distributing them freely on the Internet.  Igor Serebryany is accused of stealing information related to Direc TV's latest access cards and then posting the priporotity information to websites dedicated to the hacking of the companys security systems

As previously reported, the theft allegedly took place while Serebryany was working at the Los Angeles office of a law firm that represents Direc TV.  He was indicted by a federal grand jury last month on three felony counts of theft of trade secrets and faces a maximum sentence of 10 years in prison if convicted on all charges. (Published news reports)

**

CONVENTIONS AND HAMNFESTS: CHARLOTTE NC IN MARCH

March 8th and 9th are the dates of this years Charlotte North Carolina Hamfest and Computer Fair.  The venue is the Charlotte Merchandise Mart on Independence Blvd.  Doors open 8:30 a.m. both days with talk in on the 145.29 Mhz repeater.  This years featured forum speaker is FCC chief rules enforcer Riley Hollingsworth, K4ZDH.  More information is in cyberspace at www.w4bfb.org/Hamfest.html  (Press release)

**

RESCUE RADIO:   HAM RADIO IN TV DOCUMENTARY

Ham radio is part of a soon to be shown documentary produced for the Discovery Channel.  Joe Moell, K0OV, has the details:

--

Members of the Hospital Disaster Support Communications System of Orange County, California have been included in tapeings for a new documentary series on the Discovery Channel.  "Critical Rescue," a series of programs featuring rescue workers and those who support them, made its debut on February 6.

A team from New Dominion Pictures spent a half-day with HDSCS last August.  They interviewed founder and leader April Moell, WA6OPS, and taped reenactments of ham communications that took place on April 23,

2002. On that day, hams were awaiting their assignments for one of the four large-scale disaster drills in Orange County each year. At 8:10 AM, a 6000-ton mile-long freight train struck a standing Metrolink double-decker commuter train at a crossing in Placentia, causing three deaths and over 200 injuries. The drill was immediately cancelled, and as rescuers converged on the train crash scene, area hospitals braced for the wounded passengers.

As Net Control, WA6OPS quickly deployed hams to the 14 hospitals most likely to receive victims. There they handled countless messages, verifying victim dispatch and patient counts, providing information for inquiring victim families, and communicating with hams supporting the Red Cross. Within some hospitals, HDSCS provided direct links to handle messages between triage areas, Emergency Departments, and Command Posts.

Additional HDSCS operators participating in the reenactments were Sam Creason K6EW, Cheryl Simpson KD6MWZ, Ralph Swanson WB6JBI, and David Mofford W7KTS. It is not known how much of the HDSCS footage will appear in the edited program.

>From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, "Fateful Journey" will air 8 and 11 PM Eastern and Pacific times on Thursday February 20th, and again at 2 PM Eastern and Pacific on Saturday February 22nd. (ARNewsline™, K0OV)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

## ARRL PACIFIC DIVISION DIRECTOR JIM MAXWELL, W6CF, SK

ARRL Pacific Division Director Jim Maxwell, W6CF, has died. The 69 year old Maxewll passed away on Thursday February 6th at his home in Redwood Estates, California. The cause of his death has not been announced.

Maxwell, who became a Director in January 2000, joined the ARRL Board in 1994 after being elected Pacific Division Vice Director. He also served as an ARRL Emergency Coordinator from October 1991 to March 1999.

An avid DXer, Jim Maxwell belonged to mumerous DX clubs, contest clubs and organizations. This included the famed Northern California Contest Club. He also served as a member of the ARRL DX Advisory Committee from April 1988 through 1994 and was an accredited Volunteer Examiner.

Professionally, Maxwell held doctoral degrees in aeronautical engineering and biomechanics. He retired from the Lockheed Missiles and Space Corporation as a technical consultant in 1992 and from Scitor Corporation in 1998.

Pacific Division Vice Director Bob Vallio, W6RGG, takes over immediately as Director. ARRL President Jim Haynie, W5JBP, will appoint a new Vice Director in the coming days. Maxwell previously held the call W6CUF. (ARRL)

**

HAM RADIO IN SPACE: ISS PACKET RETURN DELAYED FURTHER

When will the packet system on the International space station come back on? Nobody is quite sure but ARISS International Chairman Frank Bauer, KA3HDO says that his group has been working with its colleagues in NASA and Russia's Energia to get it operational again. Unfortunately, so far they have only been successful in getting it turned on for about one orbit.

Bauer says that several factors are impeding the packet startup. First, the progress vehicle docked with ISS and the crew is currently unpacking and stowing about a ton of supplies and equipment. Also, the crew is working with their mission control counterparts on schedule changes that have occurred due to the Columbia accident.

Given these items its apparent that this crew is not as engaged in ham radio the way the last ISS Expedition crew was. And because of this the packet system may be off for a bit longer. (ANS)

**

CONTESTING: ARRL SAYS BEACONET IS OK

ARRL Contest Branch Manager Dan Henderson, N1ND, says that BEACONet does not violate any contesting rules. According to Henderson, after additional review the ARRL has come to believe that BEACONet is similar to an automated CQ'ing system. That it only facilitates the solicitation of contacts and as such it seems to comply with the letter and spirit of the contest rules. (VHF Reflector)

**

DX

In DX we take to the sky this week. This with word that Wayne Estes, W9AE, plans to operate the Amsat Oscar 40 satellite as FG slash W9AE from the island of Guadeloupe. The tentative plan is for Wayne to start operation at 2300 U-T-C on February 21, 22, 25, and 26 for windows to the Americas and the Pacific. Also listen for him on Sunday February 23 from 1500 to 2000 UTC for a satellite window to Europe and central Asia. Exact operating times will depend on the RUDAK schedule and Wayne's vacation activities. If you work him, QSL to Wayne Estes, 18673 W. Meadow Lane, Mundelein IL 60060, U.S.A. (ANS)

And Hagal International reports that Israeli amateur operator Dov Gavish, 4Z4DX is the first ham in the world to completely confirm DXCC using electronic QSL's. Although still not recognised by the DXCC, electronic QSL'ing is gaining ground in the DX community. (Hagal International)

Also, the ARRL's new Logbook of the World secure electronic contact-confirmation system took a major leap toward public release in January. This, with several weeks of limited tesrting of the concept. (ARRL)

**

THAT FINAL ITEM: TURN AROUND IS FAIR PLAY

And finally this week, we have all heard the expression "turn around is fair play. And one person who has just found that out is former computer hacker turned on-line security expert Kevin Mitnick, N6NHG. That's because Mitnick's new company website has been -- well -- hacked. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest of the story:

--

The ham who holds the honor of being the world's best-known computer hacker suffered the indignity of having hackers break into his new security consulting company's Web site -- twice. But news reports say that Kevin Mitnick, N6NHG, simply shrugged off the incidents as amusing and not serious enough for him to call authorities to investigate.

As I said, two electronic break-in's have taken place. The first was on January 30th. In that one a hacker calling himself "BugBear" added a page to Mitnick's corporate website that read "Welcome back to freedom, Mr. Kevin." This is probably a reference to Mitnick's probation which ended ten days earlier on January 20th. During his probation Mitnick was barred from accessing the Internet and this hack may have been more of a welcome home -- in this case -- home being the World Wide Web.

The latest incident took place over the weekend of February 8th and 9th and was more of an on-line job application than a hack. In this case a hacker in Texas broke in and asked Mitnick to hire him as the company's security officer.

Mitnick says that the hackers apparently exploited  separate flaws in Microsoft's Internet server software.  He says that the person responsible for the company's Web site failed to install patches available from Microsoft.

In neither instance did hackers vandalize the Website. One said in e-mail that he didn't do damage out of respect for Mitnick.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Mitnick's new organization is called Defensive Thinking and is located in Los Angeles.  A company spokesman said that no customer information was released nor was there any danger of information being compromised. (Published news stories)

Hi,
I'm looking any jocks who may have worked at KEYN-AM/FM and KLEO-AM  between
1967 and 1968.  I'm writing my Master's Thesis and I would be interested in
talking to about Top 40 radio in Wichita, KS at that time.
Thanks.
Marla

Hi,

If you have any airchecks from the Tri-cities, Washington, from the 60s and 70s, please email me. I'd love to know what you have. Any stations and formats would be fine: KALE, KORD, KOTY, KONA, KIOK, etc. Also would like airchecks of Pittsburgh, PA., from the 70s too.

If you've got 'em, drop me a line.

>

We signed on a new Docket 80/90 station a few years ago and we stunted by
playing Rolf Harris' "Tie Me Kangaroo Down Sport"
24 hours a day for 9 consecutive days.
We only intended to do it for a couple of days, but something happened to
cause us to keep stunting (I don't even remember what it was).
Needless to say even thinking about that song makes me want to puke.

KKBB is now "The Groove" old school oldies.

[ Moderator's Note: Woo, Jammin' Oldies, huh? I liked the format, but I
understand it wasn't very popular in most markets. Was dropped here in
favor of an active-rock(ish) format. Is it like Jammin' Oldies or am I reading
too much into the station's name? ]

So far it seems to be very similar, although with a somewhat wider playlist. The target is Hispanic adults 25-54. (The Bakersfield market is 35.5% Hispanic). This music does very well with older Hispanics. IMHO what killed "Jammin' Oldies" was the extremely narrow playlist which burned out rather quickly. Here "Jammin' Oldies" was also on a rimshot signal that did not have good coverage in the heavily Hispanic parts of town. We'll see what happens this time around. KKBB so far is playing from the 60's to the 80's, although I must confess I haven't listened much. Ratings-wise it couldn't do much worse than it was doing as a classic rock satellite repeater.

I think it's safe to say that it's "Jammin' Oldies" under a slightly different name.  100000watts.com has the format as "rhythmic oldies," which is the generic term for "Jammin' Oldies" (I preferred "urban oldies" myself).

New KKBB web site is still under construction, but they're probably running jockless anyway.

I am looking for a walkman size (small/portable) AM/FM/TV digital
tuner, with memory that has good sensitivity and selectivity.

Most importantly it needs a sleep timer or auto shut-off feature (some
used to turn off after an hour when no buttons were pushed).

Can somone please share their experiences with something like this?  I
have checked on-line (bestbuy and circuit city) and Sony makes some
nice small radio tuners but alas with no auto shut off timers.

Thanks!

Just the name of the LA4 gives it away: it is a leveling amplifier, not an instantaneous peak limiter.

I bought one made by Aiwa at a Kmart. It has all the bands, but no auto shutoff.

I think AIWA has a few with sleep timers. Or at least they had. While the quality of the tuner is good, they leave off one important thing:

A local/DX switch on FM...to attenuate strong signals if you're in an area where there's lots of overload (such as around the Empire State Building in New York).

Right before the fall book in '99 we changed the format of our "Lite Rock" to "Jammin' Hits" in Biloxi/Gulfport Ms. Our launch promotion was fairly unique. We purchased about 5 yodeling CD's and produced some very professional ID's and Liners for

"The All New Yodel 96.7 FM" "You spoke, we listened... You wanted it, now here it is ALL YODEL, ALL THE TIME" "Little old lady whoo? Yodel 96.7"
We did this for 72 straight hours from 5pm Friday til 5pm Monday (as first diaries were still in the mail) with the liners changing on Monday morning to "The New Station you've all been waiting for will be here this afternoon at 5" Did a one hour kickoff show with all of the talent and the top 15 "Jammin' Hits" then had our official launch on Tuesday morning with my show.

The funniest things about this format change/launch were by the time we suffered thru the weekend, we knew the yodels by heart, and the conversation I had with "The Yodeling Cowboy" trying to convince him to overnight his 3 CD collection to us.  He actually couldn't believe that any radio station would be in dire need of his CD's and questioned me repeatedly about why we needed his stuff...

That's pretty ambitious. 300' is more like it. Back in the 80's,
I had a Part 15 setup. I think I could be heard maybe two or three
houses down the street.

> What is the max hight a antenna be for part 15 am and what
> type antenna do most use.

What ever it is, the max *length* of the antenna + feedline is
10 feet (3 meters).

>  Where can I get info a seting up a part 15
> am station and what is the best place to buy a part 15 am equipment.

Do a google search on "part 15" am radio (mind the quotes), you'll
find lots of stuff.

Here's a couple to get you started:
http://home.att.net/%7Eweatheradio/part15.htm

well in a BIG CITY (ny, la, chicago, etc.) forget it there are so many big stations that if you try 100mw you will be drowned out, but in suburban and rural settings you will get excellent range with little effort.
the guy in Vacaville,Ca., uses a optimized antenna system with loading/matching networks (built in to the hamiltons, lpb, etc.) and he set 5 of them up in a phased array 1/8 wave apart (clustering) and on a car radio he gets city grade signal out to 3 mi. in some directions. and a local AM picks up their signal and for 2 hours a week rebroadcasts their station. this is the exception my experience has been about a mile range on a car radio about a half mile on a table top radio. there are about 100-150 P15AM'ers FM'ers across the country and they are thriving passing FCC inspections, etc. so with a little engineering you can have a good sounding AM or FM station with decent range.

Rev. Robert P. Chrysafis

If a radio station were to broadcast a paid program consisting of music not
necessarily licensed by ASCAP/BMI/SESA or whomever, who,if anyone, is
responsible for licensing fees?  Or would there even be any?

Do not listen to these morons. I have personally spoke with P15AM'ers who have been investaged by the FCC and found to be legal. these stations have a range of .5-3mi. this comes direct from FCC Feild offices, Whip and mast installs are LEGAL (especially if your states building codes require grounding), Loading coils are LEGAL they count 10ft from where wire exits box to tip of antenna( Feild agents have specifically said it does not matter what it is electrically) as far as whip and mast again one FCC agent told an aquaintance that he could not put his tx up unless it was grounded. given this it is possible to get 20uV/m @ 1 mi. or more. one ingenius fellow used 5 hamiltons in and array pattern and linked/phased together(and yes FCC looked at it and found it to be legal) and got 3mi. with a city grade signal. as for you HUFFY and BIASCOMMS you know what you are talking about as far as theory, etc., but you are too set on pirate activity to help anyone who want's to do a legal indevor(i don't know why), but why don't you try helping these people instead of discouraging them. Isn't that what these groups are for? if you need help go to the following http://www.communityradiousa.com from there you will find all the info you could ever crave, want, need, etc.

Since you never know from day to day who owns the rights to a song
you'd best assume there will be licensing fees. It's the radio
station's responsibility to pay the fee.

The cost of the time for the show should include the cost of the fees.

The brokered show should provide the station (if it's Talk or pay for
play) with the list of songs played so the station can report it if
they don't have a blanket license.

Could you point us to the case numbers so we can look them up? The FCC does everything in writing, you know. I think I would believe FCC documentation before I would accept the word of folks who are desperate to justify and legitimize their activities. I'm sure those who might be at risk of FCC action might wish to hear from a more credible source as well.

Third-party "I have a friend who personally..." has led to a lot of urban legend.

Hi folks,

Any recommendations on a good EAS unit for an FM radio station?

We bought a TFT EAS911 unit many years ago when EAS was first implemented.  The damn thing has never worked right.  TFT has provided some firware updates and has suggested some modifications (cutting traces on the motherboard, replacing capacitors, etc.), but the thing still occasionally loses its memory and it more often than not fails to automatically forward monthly tests and actual emergency alerts.

So if anyone has installed an EAS unit that meets the FCC's requirements for a National Non-Participating (NNP) FM station, and which has worked fairly well over the years, please let me know.

Thanks in advance,

Ted Young
WMBR 88.1 FM at MIT

It took me a little while to figure it out, but really - if you want to have fun with part 15 then do the research, buy some stuff and have fun.

If you want to spend all you time in pissing matches with with a bunch of people who have nothing better to do than spit on the internet, come here.

This newsgroup has been dead for years, all the good folks who used to share useful info are long gone.

Nothing left here but turds and trolls.

As they say on the restroom wall "Those who read these words of wit..."

A number of years ago, I was involved in a business that provided part 15 AM devices for businesses.  One installation was located on top of a 5 story racetrack and casino building in Altoona, Iowa on what was probably a metal roof and the unit was well grounded.  It was a commercial 100mw unit with a 10 ft whip and the audio remoted from inside the building.  It was operated at 1610 before the expanded band had any occupants.

It covered a one to two mile radius very well and was actually heard (very noisy but in the background) about 15 miles away in West Des Moines.  It's amazing what a well elevated, well grounded installation will do on a clear frequency.  The problem is, there are now no clear frequencies.

At the same location, we also had an identical unit on 1560Khz (to cover people whose radios didn't go up to 1620).  It barely covered the parking lot.  Again, the key is a clear frequency.

Ray Dennis
Des Moines

Man, my sentiments exactly. I put our EAS-911 units on their own UPS to try to
avoid the obnoxious memory lapses that have afflicted all three boxes since

new.

I NEVER know when some simple chore is going to be botched by lost settings. It always seems to be the one-button forwarding and one-button RWT functions, rather than wholesale memory loss. That fact can't be explained by blaming capacitor/circuit trace/voltage regulation issues.

Now we're under more pressure to put wildly ill-advised Amber alerts on the air with the same technology and we get the same indefensible results. Ugh.

I suppose that explains why you're here.

>if you need help go to the following  http://www.communityradiousa.com from there you will find all the info you could ever crave, want, need, etc.<

Yes, by all means, go to that site, if you want to burst out into hysterical laughter.  Never in my life have I seen such a collection of gossip, quarter-truths, urban legends and outright lies perpetrated in the name of "community radio."  The FCC petition for a new broadcast band was particularly amusing...a so-called petition not including a single word of justification for what's proposed, but instead containing a political screed against conditions beyond the ability of the FCC to remedy.

But, thanks....I needed something to laugh about.

If it's not administered by any of the groups who do that sort of thing, you have to work directly with the copyright holder, get their permission and negotiate a fee.  This would be very rare though.

>if anyone has installed an EAS unit that meets the FCC's requirements for a National Non-Participating (NNP) FM station, and which has worked fairly well over the years, please let me know.<

At one end of the EAS equipment spectrum, you have the Sage ENDEC, which is the priciest one on the market, but which has everything you need (except monitor radios) built into it.  You don't need anything else for it to do its job. It's sold exclusively by Harris.  The only issue I've ever had with one is its wall-wart power supply, which tends to burn up prematurely because its components weren't properly chosen.  Replacing it with a heftier one cures the problem.

At the other end, you have the Holly-Anne...a bare-bones EAS box which has no front-panel controls at all, and which requires a PC to program.  It's cheap, but a PIA to program and use.

In between are the Burk and Gorman-Redlich boxes.  I have no experience with the Burk, but the G-R is an OK box...a bit of a pain to use, but not nearly as bad as the Holly-Anne.  Some of the G-R's functions are only programmable with a PC, but the RWT and RMT can be done from its front panel.

JMO, of course.

In other words, it is about kids playing with toys. It is a shame that these folks cannot channel their attention and efforts to REAL community radio...the kind that serves a community with new and different programming provided by a panoply of programmers, artists, and musicians.

You don't know how frustrating it is for a struggling community station that has been serving its community for over thirty years to search for volunteers and talent to contribute to a really worthwhile effort, while in the meantime, there is no end of little wannabees who cannot see any farther than playing with toy stations in their bedrooms.

Where are all these people when we're looking for help?

Amateur Radio Newsline™ Report 1332 – February 21, 2003

Amateur Radio Newsline report number 1332 with a release date of Friday, February 21 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Snow causes outages in the East and ham radio comes to the reascue.  Hear the details on Amateur Radio Newsline™ report number 1332 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO:  THE NORTH-EASTER OF 2003

Snow plowing crews struggled to clear roads and airport runways on Tuesday February 18th.  This after one of the worst storms in decades buried parts of the United States eastern states in 2 to 4 feet of snow.  And in some areas ham radio was called out as we hear in this report:

--

Snowdrifts were piled high from the Ohio Valley to New England, mudslides and floods wreaked havoc in the southern Appalachians, and layers of ice snapped trees and power lines. At least 47 deaths had been blamed on the storm since it charged out of the mid-West Plains states over the previous weekend. Schools were closed from West Virginia to Connecticut and more than 250,000 homes and businesses lost power and telephone service.  Enter ham radio.

During the height of the storm on the 17th, two communications emergencies were declared by the  Federal Communications Commission in conjunction with the ARRL.  The first was in Virginia to protect amateur emergency communications on 3.947  and 7.243 Mhz -- plus or minus 3 Khz.  Also included were 145.430 MHz and 146.880 MHz repeaters in Richmond, the 147.360 MHz machine near Chesterfield and the 146.760 Mhz repeater serving Williamsburg at times when each was handling  emergency traffic.  It was only in effect for a few hours and terminated at 19:00 hours UTC the same day.

The second communications emergency was declared for Kentucky. Former ARRL President George Wilson, W4OYI, lives in the city of Owensboro.  He  says that his area recieved about 2 inches of glare ice and quite a bit of sleet on top of it.

But the big problem was in Fayetteville near the city of Lexington.  Again the problem was mainly ice related and radio amateurs were ordered to keep from using repeaters on 146.760 Mhz, 147.165 and 444.125, MHz unless they were specifically taking part in the handling of emergency traffic

Further to the North, Bob Josuwait, WA3PZO tells ARNewsline™ that Montgomery County in suburban Philadelphia Pennsylvania had about 20 inches of snow. Montgomery County RACES was activated at 1800 on Sunday, February 16 th.

Bob Lees, W3ZQN, is Montgomery County RACES Radio Officer.  He reports that members with four wheel drive vehicles were told to help, as possible, by providing transportation for essential hospital and nursing home workers within the county.

The Radio Officer sent an alert via the pagers carried by over 50 members, convened a net on the county two meter repeater and began making phone calls to determine specific needs.
RACES responded or attempted to respond to 17 different requests for transportation services until about 10 P.M. local on February 17th.  A total of 21 people were transported by six different drivers in their personal vehicles. Each vehicle was in constant contact with net control by radio as they traveled.

Lees says that six hams acted as net control stations from their homes. Another 14 who did not have four wheel drive vehicles checked into a net called at noon on February 17th.  Each operator indicated that they were monitoring and could possibly help in other jobs if requested.  In all it was a good job done by RACES and ARES in the face of one of the worst North-Easter's of the past hundred years.

For the Amateur Radio Newsline, I'm Blair Alper, KA9SEQ.
--

For the region as a whole, it was the worst snowstorm since the blizzard of

1996. In that one at least 80 deaths were blamed on the weather. (ARNewsline™, ARRL, WA3PZO, W4OYI, VHF Reflector, Repeater Owners Remailer, published news reports.)

**

## INTRUDERS: DRUG RUNNERS ALONG THE VK COASTLINE

What appear to be illegal drug runners have taken to the ham bands along the Australian coastline. Q-News Graham Kemp, VK4BB and Chris Wright, VK2UW, have the latest details:

--

“14.044 daily at 08:30 U-S-B are "Big Voice" -- must be thee HQ Stn.. and "Low Voice" Supply Boat ?? On the 23rd January "Big Voice" was joined by another Big Voice -- signal 59+ -- also in the same direction...

The N.T.News carried an article about the "roadside drug distribution points in Western Australia. Maybe these two 'Big Voices' are running the distribution points and the 'smaller Voice' keeps up the supply to the Distributors ??

There was a video report on Darwin TV picturing an 'abandoned' Chinese Fishing Boat along the West Aust. Coast tied up to the Shore. No Crew and No Cargo. And there are some Indonesian Voices 'Hopping' in on the Frequency when it is not in use. Maybe they have a part to play in the business?

If my bearing of 250 degrees and VK6XW bearing of 360 degrees were used, they would cross in the vicinity of Broome.

--

According to Q-News, Australian hams are being encouraged to report anything they hear to the nations Intruder Watch Coordinator. (Q-News)

**

## HAM RADIO IN SPACE: JAPAN ARISS CONTACT TO THE ISS

Ham radio contacts with the International Space Station continue. One of the latest took place on Tuesday February 18th when 8N3HES at the Hirano Elementary School in Kobe Japan succeeded in connecting its students with the ISS crew using Amateur Radio curcuits. One of the first questions answered had to do with ecology. How do you dump your garbage in space?

--

CONTACT AUDIO

--

That recording was made by JN1GKZ and you can only hear the I-S-S side of the contact. And some of the questions brought more information than many needed to know like when one student asked: “How do you take a bath in space?

--

CONTACT AUDIO HERE
--

This is the 3rd ARISS School contact with a school in Japan. To see a list of questions and herar all of the answers you only need to take your web browser over to the JN1GKZ website. You will find it at: http://www.qsl.net/jn1gkz/sound/ariss/8n3hes.htm (ARNewsline™ with sound from JN1GKZ))

ENFORCEMENT: PIRATES CANNOT EVER HOLD RADIO LICENSES

Pirate radio operators cannot ever get licenses to operate a legitimate radio station. So says a court of appeals. Amateur Radio Newsline's Ken Locke, N8PJN, has more:

--

A United States appeals court has upheld as constitutional a law that bans a pirate broadcaster from ever obtaining a license for a low-power FM radio station. In fact, it bars a current or former pirate broadcaster from even being involved with a station.

In its action, the full court reversed a ruling last year by a three-judge panel of a court that had struck the law down. By a 7 to 1 vote it ruled the law and the government regulations implementing it do not violate free speech rights under the First Amendment.

Back in 2001 Congress mandated that the FCC adopt rules to ban anyone who had been a pirate broadcaster or currently was broadcasting illegally from obtaining a license for a new low-power station. The appeals court appears to have taken this one step further in banning any affiliation bu current or former pirates with a legitimate FCC licensed broadcast operation.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN, reporting.

--

Thanks Ken. (FCC)

**

## ENFORCEMENT:  NO TWO METER SETS FOR HUNTING SEASON

The FCC has written to the manager of a Radio Shack store to warn against selling ham gear to unlicensed persons.

The letter went to Dennis Wilfong who manages the Radio Shack at the Valley point Shopping Center in Elkins West Virginia.  In it the FCC says that it has information indicating that numerous individuals are purchasing Amateur radio Service Two-Meter radio units from that store for use during hunting season and the purchasers are using them without the required license.

But thats not all.  The FCC says that those purchasing the radios are either not being told that the units require a license, or are being misinformed as to the licensing requirements.

The FCC tells Wilfong that he should advise purchasers of Amateur Radio transmitting equipment that unlicensed radio operation is a violation of Section 301 of the Communications Act.  That using the transceivers without first obtaining an Amateur Service license may result in a monetary fine of $7,500 to $10,000.  (FCC)

**

## ENFORCEMENT:  FLORIDA UPGRADE SET ASIDE

John S. Gregory, W3ATE, of Lake Worth Florida has had his General class upgrade set aside.  This, based on complaints about the operation of his station on frequencies not authorized by his Technician class license.

According to the FCC, at various times in 2002 Gregory apparently checked into a net on 14.300 Mhz while still a Technician class license holder.  He was issued two warning letters but the FCC says that both were returned as unclaimed.  (FCC, W5YI Report)

**

## ENFORCEMENT:  FCC ISSUES A RASH OF FINES

Hams are not the only ones hearing from the FCC.  The Commission is continuing to flex its enforcement muscle by issuing a number of monetary forfeitures. Here are some recent examples courtesy of the CGC Communicator:

How about $2,500 to a telephone company for failing to exhibit prescribed tower painting.  Or $4,000 to a CATV operator for failing to retransmit the EAS required monthly test.

But those are small in compariason to a $10,000 fine issued to a communications operator for failing to exhibit prescribed obstruction lighting on its antenna structure.  Another $10,000 was issued to to an FM pirate while a $15,000 fine was issued to to an AM radio station for failing to maintain operational E-A-S equipment, and for failing to enclose the station's antenna tower within an effective locked fence.  The whole story is in cyberspacve at http://www.fcc.gov/Daily_Releases/Daily_Digest/2003/dd030204.ht  (CGC Communicator)

**

## RADIO POLITICS:  ARRL TRYING AGAIN WITH SPECTRUM PROTECTION ACT

If at first you don't succeed, try try again may be an old addage, but it applies in the case of te 2003 Amateur Radio Spectrum Protection Act.  This is a bill that has been introduced in the US House of Representatives by Michael Bilirakis of Florida.

According to the ARRL. Bilirakis filed the latest version of the bill, HR 713, on February 12th. It has been referred to the House Committee on Energy and Commerce.  Like its predecessor,  HR 713 is aimed at ensuring the availability of spectrum to Amateur Radio operators. It would protect existing Amateur Radio spectrum against reallocations to or sharing with other services unless the FCC provides equivalent replacement spectrum elsewhere.

The previous version of the Spectrum Protection Act attracted more than 50 cosponsors. An effort will be made to encourage additional House members to sign onto HR 713 as cosponsors. Additional details are on the web at www.arrl.org.  (ARRL)

**

## RADIO LAW:  HAM PETITIONS TO KEEP EQUIPMENT ASALES DATE ON FILE

Dale Reich, K8AD, of Seville Ohio,  has petitioned the FCC to require sellers of two-way voice or data equipment to keep on file a buyer's name, address, telephone number and any future information.  This, when selling a radio that required licensing under the current FCC rules.

Accordiong to an ARRL bulletin, the information collected would remain private, available only to the FCC or law enforcement.  Reich said in his petition that any retail vendor would be able to ask local police for an investigation if the retailer suspected the radios were not going to be used in compliance with the law.

Included in the petition is a requirement for "ownership and license tagging" for gear operating under Parts 5, 15, 18, 74, 80, 90, 95 and 97.  In his petition, Reich said such tagging used to be an FCC requirement and that his proposed change was a needed tool for local law enforcement.

The full text of Reich's petitions is available on the FCC Web site.  Search for petition number RM-1064.  Comments are due no later than February 28th. (K8AD, ARRL Letter)

**

## HAM RADIO ENTERTAINMENT:  WRTC 2002 VIDEO NOW AVAILABLE IN THE USA

The World Radiosport Team Championship 2002 video had its United States premiere on Wednesday, February 5th.  This, before a standing-room-only crowd in Washington state hosted by the Western Washington DX Club.

With photography by James Brooks, 9V1YC, and Dave Bell, W6AQ, the video covers WRTC 2002 from the perspective of a professional sporting event.  The show begins with the arrival of competitors from more than 30 countries.  It then takes the viewer behind the scenes for the various pre-competition activities and into the actual competition.

The video is available on VHS tape and DVD with extra material on the DVD.  You can place your order on-line at http://home1.pacific.net.sg/~jamesb  (WRTC)

**

CONVENTIONS AND CONFERENCES:  SEVHFS IN HUNTSVILLE IN APRIL

If you have been trying to register on-line for the upcoming Southeastern VHF Society conference and getting a reply of no such website, try again.  It will work the way its supposed to.

The problem was caused by an Internet Service Provider outage at the most inoportune time.  The repair:  Everything was moved to different server but that took a few days to accomplish.  And now that its all back up and collecting bits and bytes in cyberspace, you will want to visit www.sevhfs.org for the latest conference update.  This includes word that Steve Kostro,  N2CEI of Down East Microwave Incorporated will be hosdting a surface mount soldering class on the opening Friday morning of the gathering.

The when and the where?  This is the 7th Annual Southeastern VHF Conference.  It is slated for April 25th and 26th at the Huntsville Marriott in Huntsville, Alabama.  For further information and to register, visit that now up and running website at www.sevhfs.org.  (SEVHFS)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO:  THIS IS HDSCS

Last week Amateur Radio Newsline's Joe Moell, K0OV told you that members of the Hospital Disaster Support Communications System of Orange County, California had been included in a new documentary series on the Discovery

Channel. The show is called "Critical Rescue" and it aired on Thursday February 20th and on Saturday February 22nd. But what is the the Hospital Disaster Support Communications System or HDSCS and how does it work? Back with the answers is Joe Moell, K0OV:

--

HDSCS is a specialty group of ARES. It was formed in 1979 with the specific mission of providing backup communications that are critical to patient care. Since then, HDSCS has responded in 75 communications emergencies, ranging from single-hospital telephone system failures to area-wide disasters.

For its service, HDSCS has received awards and commendations from many hospitals and agencies, including FEMA. The most recent is the National Certificate of Merit from ARRL, awarded at the Board of Directors meeting in January 2003.

>From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

For more about the Hospital Disaster Support Communications System of Orange County, California and information about how hams can best support hospitals, point your Web browser to www.hdscs.org. (ARNewsline™)

**

EMERGING TECHNOLOGY: RC-110 REPEATER CONTROLLER GOES OPEN SOURCE

How would you like to be able to customize a repeater controller your way? Well, according to Ken Arck, AH6LE, There has been considerable interest from folks wanting to customize their RC-110 repeater controllers. So Arck, who is both president and CTO of Arcom Communications says that he has decided to make the source code available to any ham who wishes to take a stab at 'hacking' it for their own use.

Writing to the Repeater Owners Reflector, Arck says that as far as he knows, no other repeater controller offers this open source archecture. Of course there are certain conditions, but they're pretty straightforward.

If you are interested in getting the source code, Arck says that you simply need to join RC-110 mail list. To do this send an e-mail to rc110-subscribe@yahoogroups.com. The source is available in the files section of the list. More information is at Ken’s website – www.ah6le.net
(Repeter Owners Remailer)

**

INTERNATIONAL – UK: REPEATER STOLEN

A repeater in the United Kingdom is off the air due to theft. According to the RSGB, the GB3NC two meter repeater and its site companion the GB3MCB 1296 MHz beacon have not been heard since someone made off with the equipment. Both were co-located in Cornwall and the RSGB says that its not known if either will ever come back on the air. (RSGB)

**

INTERNATIONAL: YUGOSLAVIA: THE NEW NATION OF SERBIA-MONTENEGRO

Yugoslavia has become Serbia-Montenegro. This, after Yugoslavia's parliament voted to formally abolish that nation and replace it with a new country called Serbia-Montenegro.

According to the ARRL Letter, the new arrangement will have little immediate impact on Amateur Radio. For D-X-C-C purposes, Serbia and Montenegro will be considered a single entity, at least for the time being. Also, amateurs there are expected to continue using Y-U and Y-T prefixes. (ARRL)

**

CONTESTING:: UT5UDX ON THE MOVE

Ukrainian international football player Sergei Rebrov, UT5UDX, who moved to England in a multi-million-dollar deal in 2000, has moved again. This time to Turkish side Fenerbahçe.

Word is that Rebrov has signed an 18-month loan deal with the Turkish club on January 28th. The Turkish club now has the right to buy him at the end of the loan period.

Rebrov is a High Frequency contest operator. He and has been very active as M0SDX from his home in the U-K and from other locations in the British Isles over the last two years. He is reportedly now in the process of obtaining a Turkish callsign. (RSGB)

**

DX

In D-X, GB2RS says that a group of Swedish amateurs will be active as JW slash SM0BSO, JW slash SM0LQB and JW slash SM1TDE from Svalbard through the 23rd of March. Activity will be on 160 through 6 meters on CW, SSB, RTTY and other digital modes. Q-S-L this one as directed on the air. (GB2RS)

And F5PAC is returning to Panama from the 23rd of February until the 24th of March. He will also operate from several Islands on the Air groups including from the 25th to 27th of February. You can fopllow his exploits on the web at www.qsl.net/f5pac (Via e-mail)

**

THAT FINAL ITEM: EXTENDING MORE THAN A WELCOME

And finally this week, the story of a ham radio dream thats about to come true. Its also the story of what Amateur Radio is all about. Bruce Tennant, K6PZW, has the details:

--
Audio story only. Hear it at http://www.arnewsline.org
--

And after that, what else is there to say? (K6PZW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Since I've never stuck my head into an operating microwave oven I'm
not sure what that heat might feel like. It's such a shame we've lost
Rod Serling and that Art Bell has retired from radio. Both would find
this stuff great fodder for their shows. I think Art fills in when
George Noory is on vacation. You might try and catch him. Only Art has
the talent to handle this stuff and do it credit.

The next time one of our TV stations has a Twilight Zone marathon I'll
watch, as I usually do. I'm pretty sure he's done an episode that

sounds much like this. We might find important clues there.

In the meantime, an inexpensive way to shield yourself from these microwaves is a metal (not plastic) collendar placed on your head. If you still find the heat getting through, I'd recommend a double wrap of Reynolds Wrap to reinforce the shield. Make sure the little feet on the collendar stick out through the Reynolds Wrap to act as a sort of lightning rods. That's very important.

>I advise all people believing in
>aliens or people talking with aliens to start a war of defiance of the
>aforementioned lies and other lies and to understand that the reality
>operators of Earth are stating falseness that people in almost all cases
>would believe.  The system operators do not want many people, or even one

>created it.  In reality, Earth matrix operators are racist, jealous and
>envious of human life, since humans on Earth have increased complex
>computational logic and are more superior than the system operators.

Does it have to be now? I'd much rather wait until we've concluded our wars with Iraq, North Korea, Pakistan, Al Queida, New Jersey, the Duchy of Grand Fenwick and France before we start another one with "reality operators" we can't identify, though I believe I had a warm spell in my head that told me they're somewhere in Tonga trying to buy satellite parking space. George W. might be able to spare a tank or two just to be prepared.

>In reality, if aliens ultimately did visit Earth, they would need food and
>resources and parts to fix their ships and everyone would know of the
>glorious moment in time when they came

Not true. If Gaffo and Tom are correct, the 12 evil controllers of the media would have prevented the information from getting out so they could run a few extra commercials and play music mixes neither of them like. The only unadulturated sources of news are the LPFM operators who can actually come up with the $800 a month to run their stations. Doesn't look good.

I'd comment on the rest of your "War and Peace" length post but I have to get back to helping control the media from my secret "corporate radio" command post. Since we run 24/7 tjhere's no rest for the weary. I consult all 12 and most of the other companies that own stations and have to make sure they don't stray and, accidentally, do good.

Mr. Shampoo, I have a friend named Daly Conditioner who might, for a price, do some investigative work. It's a shame Alex Dreier died some years ago. He'd be a reporter who would take on this story like static cling. If the signals havent already been named I vote for "Permanent Waves" and I want credit. I know that Hertz, but fair is fair.

Rich "Rinsin Repete" Wood

```

Ladies, gentlemen and Meyer Gottesmann,    ;)

On March 4th, 2003 I will be leaving the comfortable, seasonably frigid environs of Northeast Ohio in order to endure the searing heat of the Mojave Desert, where my mother-in-law claims it's cold if the temp drops below 65.

I'm going to visit all of the new family members I seem to have acquired when I got married last year, and to seek out job opportunities and/or contracts on the Left Coast.

It will be a working vacation for me, and I will be on the Internet for at least 20-30 hours that week, including most of the day on March 4th. During that time, I will be processing your RRB submissions and forwarding them on to the newsgroup.

The only day I will be completely out of commission is March 11th, the day I fly back, where I will spend pretty much the entire day on a plane. (I'm not leaving Ohio until relatively late on the 4th.) I'm also told that I'm going to Disneyland, so I may not end up posting anything that day. :P

I will, of course, still be accessible via e-mail.

FYI.

BTW, we have a layover in Minneapolis. Can anyone point me to a good source for Vikings gear at the airport? (Al?)

Cheers,

Ye Olde Newsgroupe Moderator

Good morning!

This weekend I've been ironing out some technical issues regarding crossposting into other groups on posts to rec.radio.broadcasting.

You should no longer have any trouble doing so.

I post batches of newsgroup submissions manually and keep an eye on what's going through and what's not, and I think I've fixed all of the

newsgroups we were having problems with, including ba.broadcast and
alt.radio.pirate. However, I will continue to keep an eye on things
just in case.

I honestly don't know about the equipment required - I wouldn't think it

would be much,   you would have your own studio and could even pump the
signal on some service like Live365 and have the cable op pick it up.

On the other hand - we did discuss this path with our local cable
company several years ago - and determined that it was cost-prohibitive.
If you are using it for commercial content.

601's! Good lord. Were yours in the letherette cases or did somebody spring
for rack mount ears for yours. Ever have some klutz come into the studio
and knock over both 601's one of which was playing at the time?

Several services.

Live365.com is one that comes to mind, I know someone who is doing that now (rather successfully). He has a niche market, and is attracting advertisers in sufficient volume to support his efforts.

Here in Canada, we simply tell the interviewee that we're looking for
opinions to use on a radio program.
If they decline, we move on to the next "victim"  :)
I find minidisc is fine for on air use.
We use it regularly for news gathering here but you're better off
getting one of the pro versions, such as the Marantz model.
We record in mono using an EV 635a.
Good results!
However, you may want to find out what your end user prefers for
playback and work in that model.
Marantz also makes a flash card recorder which looks similar to the
minidisc model.
Both are easily dumped into a computer for editing and playback.

30! How you get away with 30? I worked at a non-com in the late 60's
early 70's and we had to log transmitter readings every 15 minutes.

I hated taking the readings as those were the days you were required to
tap the meters and record any differences between taped and untapped
readings. Remember that part of the regs? That old 10-watt box was so
badly wired that you could hear the tapping sound over the air.

KGO (AM) in San Francisco is the undisputed #1 station in the market. It has none of the hosts mentioned in this thread. In fact, it only has two nationally sydicated hosts (Dean Edell, which is done from the KGO studios, and Bob Brinker). All the rest of the time is done by local talent, none of which can hardly be classified as "right wing".

> What kind of programming would you use to replace this 'jiber-jabber'?

One might ask KGO.

"WBRW" <wbrw@radiomailbox.com> wrote in message
news:b0v32u$m14$1@xuxa.iecc.com...
| > at that time many U.S. digitally tuned radios were made with both 10 kHz
and
| > 9 kHz
|
| A friend of mine has an early '80s receiver with digital tuning that
| uses 9 and 10 kHz channel spacing *simultaneously*.  As far as I know
| it is a regular U.S. model tuner, that was designed this way.  As it
| scans the dial, it will stop on a station and then decide which
| frequency step is more appropriate -- and not necessarily the
| "correct" frequency!  For example, it will stop on a local station
| that broadcasts on 710 kHz, and after flipping back and forth between
| 710 and 711 kHz a few times (as you can see happening on the LED
| display), it will "settle" on 711 kHz because this provides slightly
| better treble response.
|
| It's an odd animal to be sure, and may either just be a really weird
| design, or may have been purposely designed to support simultaneous 9
| and 10 kHz AM channel spacing in the event that North America did make
| the transition to 9 kHz spacing.

The old factory analog scan radios used to do something similar. They would go past the station and then go backward to lock on the station. Most of the time they would only do it once.

The scan on FM radios, after they went digital, never worked much better. My first digital with a scan worked poorly in New Jersey. I thought it was because of all the short spacing. For example, if it was going  down, it would lock onto WIFI/WXTU at 92.5. Then you would push the button again to stop on WOBM at 92.7. This was in areas that the 92.5 station was not listenable. Later, when I moved to Florida, when short spacing wasn't the problem it was up north, I realized the radios just had the scan as a selling point and another button to confuse the kids who were buying them.

What about the LPB Blue 5C?  It's only US$1,300.

According to the website http://www.lpbinc.com it's got the following:

.. RJ-45 Ethernet Cat-5 Connectivity
.. 2 Independent Headphone Amps
.. Heavy Duty Mil-Spec Switches
.. Mono Telephone Buss
.. Input Follow Muting
.. 10 Stereo inputs
.. Stereo Cue Buss
.. 5 Stereo Channels
.. Stereo Program Buss
.. Input Follow Remote Starts
.. 13" x 16" Footprint Fits Any Studio
.. Switches Rated to 5 Million Operations
.. Transformer Balancing For RF Immunity

I collect old radios.

Old radios in Colombia (at least in the city of Cali) are very hard to find.  They die, they get repaired, they die again...they eventually get trashed when they get too expensive to repair.

My cousin had a huge Colombian-made Sharp tube TV console set.  When it
One taxi driver there who drove me whome with one of my finds (too big to take on the city bus) told me he used to have an old tube radio - but he sold it and traded it for a modern stereo with cassette player.

Cheap no-name transistorized electric radios (like medium sized portables, boomboxes and clock radios) can be bought from street vendors and any numerous medium-to-large sized discount store. They pick up a few of the higher-powered local top-40 FM stations and that's good enough for most people.

I bought two such generic Chinese-made animals myself when I visited back in 1994 and still have them.  You want even cheaper, buy a pocket walk-man style radio. :)

During my last trip to Cali (in 2001), I brought back a couple of old radios from the 1950s - a large Grundig and a smaller British-made Philco....in good, easily repairable shape.

Although I did pay a bit more than I would have wanted for the Grundig since I bought it at an antique store (US$90 in 2001 money - for a radio with no FM band) - the Philco was US$12 in 2001 money.

Of course, Cali is a major metropolitan area, very similar to New York City where you can also find such cut-rate cheap stuff easily. Things might be different in small remote towns (just like here in the USA) where you're not close to any stores.

In New York, you can't go a block without finding a dollar store, and most of these do sell radios (not at a dollar, of course).

A lot of people don't have money to pay the rent but they sure manage to put themselves badly in hock to buy that new colour TV or fancy stereo with the huge speakers.  It's messed up priorities. :-/

For sale:

The "Radio Crazy" is back!

Partial interest of AM station for sale. Joint venture. Element of risk.

Fulltime 1 KW AM station in NE Mississippi. City of well over 12,000 people. Well over 35,000 in county. Station on air since the 1940s. NO real estate. You heard it first here, kiddies! HI!

Active or inactive investors with at least $10,000 each are welcome. Total asking price for station is $85,000. I am NOT a broker, agent, shill or part owner of this station!

"AM bashers" and other negative nabobs please stay
away! If AM was good enough to listen to in 1922, it
is good enough now! (teasing!)

Tel: (478)741-1710 in Macon, GA. or of course email.

73,

Meyer Gottesman, W6GIV

Between server issues a couple weeks ago and being really, really busy
with actual work, the posts have been piling up. I owe y'all an apology.

I need to start my project to semi-automate moderation of RRB posts. It
will help to mostly eliminate the problem of posts not being pushed
through in a timely manner, which at this current time is a... erm....
human resource issue :>

This is some welcome news!

I wonder if there'll be a live studio audience??

I really miss being able to drop into the old Harrison St 105 studios & have a cup of awful coffee whilst being enterained by Alex & company.

I will DEFINITELY tune in....:)

Seems a few Japanese companies in the 60's churned out a basic pill-shaped dual crystal microphone that looks almost like a miniature version of the RCA 77 series ribbon microphone.  Names like Calrad, Argonne, Fentone, etc.

Anyway, I think at the time they were sold the going price was somewhere around $10-$15.  In recent years, these microphones (both in used and NIB condition) have appeared on eBay and have sold at prices ranging from $50 to $200.  In the last few months, a couple of eBay sellers started selling quite a number of these NIB (uncovered a hidden cache?) and all kinds of people have emerged from the vast Internet to bid on them, forcing the average price to close at around $125.

Are these microphones worth that kind of money?  I've heard varying opinions on their sound quality ranging from "junk" to "not bad." Seems to me that if there is any value to them, it's that they are yet another fading token of a 60's item made (partially) of bakelite.  Are they only appreciating in price out of ignorance to any audio value?

Any opinions or comments?

One of the local Boston radio stations did a tribute to Bob Wilson, longtime
Bruins radio play-by-play man....it was at least an hour long, maybe
more....does anyone have it on tape? Know where to get a copy of it it, etc?
I have MUCH to trade, including many old Bruins games on video (vhs or
DVD).....
PLEASE E-MAIL YOUR REPLY......THANKS

I have one of these old beasts in my storage unit, kindly given to me
by a client some years ago. It came with a manual/schematic, but I
seem to have misplaced it :(

I would be very interested in a PDF scan of the manual (and I could put it up on the web for the benefit of others), but a hardcopy is OK.

Write to electronic_dave at hotmail dot com

Thanks!

Go here:   http://www.dixonsystems.com/Aboutus.htm

I had ten of these in my last five station newsroom.
They're widely used in Canada and the US.
So far, no one has managed to break one and they're simple to use.

As a youngster in the late 50s and early 60s, I used to "hang around" the two local AM stations that were within walking distance of my home. KOOS-AM/250 Watts on 1230 KCs was the night time preference because it had Top-40 programming in the evening. (At the tender age of 15 - with a special work permit from the State of Oregon - I worked there for two weeks as a summer replacement night-time DJ.) The other station was KYNG-AM/1000 Watts Daytime Only on 1430 KCs. (That callsign went someplace else, and it is now a "High School" radio station under the call sign KMHS, I believe.)

Now that the nostalgia is out of the way, on with the "intermittent audio" yarn.

For most of the day on Sundays, KYNG played either religious music or other pretty mild stuff, instrumentals, big bands, etc. The station owner came in and was the "DJ" from sun-up, until mid afternoon, when a graduate of the Don Martin School of Broadcasting would pop in and the tempo of the music would elevate at tad, until they went off the air at sun-down. One Sunday, I happened to visit early in the day and was sitting around watching and chatting with the station owner during the music. During one of his breaks, commercial, news, something vocal (senility is a terrible thing), the Vu Meter needle just started taking a nap over on the far left pin. He was familiar with the symptom, which had existed since the station was moved from a hotel room, to a suite of offices over one of the local bakeries. He proceeded to strike the console (a Gates "Yard") at a certain predetermined spot - looking for some reaction. After the first couple "thumps" he started to say "Damn!" each time his hand made contact with the console. Apparently, he was not watching as carefully as he should and for three blows, the needle peaked - something had gone out. Within seconds, the phone lines lit up and the owner got to apologize one by one to almost the entire population of that small town (an exaggeration for impact purposes only). At his next break he made an on-air apology, but continued to field a few more calls. I took that opportunity to smile weakly, wave, and quietly slip out the door.

I'm sure there was a lesson to be learned there someplace.

?^)  Dave

<< Did the engineer tell you why minidisc would require processing? At WOR we converted the news department to minidisc and didn't use anything other than the overall processing >>

hmmm. what the engineer told me is that i couldn't take the minidisc out of the recorder and put it on the air as-is. when you say "overall processing," are you saying that you didn't to do anything to the minidisc itself after you recorded it (and that the overall processing is the compression that's in place anyhow)?

pat

Well, maybe some people like 'em.

I had one, back in the day, sold by Radio Shack; it had the tinniest tone
imaginable, like any crystal mike.  No bass.

If somebody thinks it's worth $200, I suppose I'm no-one to say different.
I'd rather buy an EV 635A or AT 802 or the like.

That had to be a station requirement. I never recall a 15 minute rule
or a "tap the meter" rule.

If David were to have moved to Silicon Valley would he, suddenly, be more computer literate than he is now? It seems to me Bill Gates made a serious mistake by ignoring Washington until he couldn't avoid it. There are many decisions made and issues debated in Washington that have serious impacts on Silicon Valley.

Having someone like David close to those issues seemed like a smart move to me.

Exactly. Other than editing the cuts, there was no processing beyond
the processors in the audio chain to the transmitter.

Amateur Radio Newsline™ Report 1330 - February 7, 2003

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+++

A NOTE ABOUT WHAT YOU ARE ABOUT TO READ

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would strongly urge you to listen to the audio version this week. Our service is best described as "audio intensive" and all Amateur Radio Newsline (tm) scripts are specifically written for the "spoken word."  Because of this there is no way to convey in print the emotion of what you "hear" when you listen rather than read.

Candidly, you are really missing what Amateur Radio Newsline is really all about by only reading it.  The newscast is recorded each week by professional broadcasters and is available for private listening or rebroadcast over your repeater.  Two methods of delivery are available: FTP downloadable MP3 files or dial-in telephone.

Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast.  Free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

The Newsline Production Team

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+++

Amateur Radio Newsline report number 1330 with a release date of Friday, February 7 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  The space shuttle Columbia falls from the sky and all on-board are lost.  Three were radio amateurs.  More on the tragedy and the search for answers comes your way right now:

(Billboard Cart Here)

**

### HAM RADIO IN SPACE:  HAM RADIO OPERATORS LOST IN COLUMBIA TRAGEDY

Three ham radio operators were among the seven member crew of the space shuttle Columbia who were killed when the orbiter broke up during re-entry over Texas on Saturday February 1st.  Amateur Radio Nesline's Norm Seeley, KI7UP, has the details:

--
President Bush Audio: Audio only report.  Hear it at
http://www.arnewsline.org
--

Those were the words of President George W. Bush expressing the grief of the world on learning that that the spaceship Columbia had fallen from the sky.  That it's crew of seven astronasuts was lost.

On board was a 7 member crew that included three ham radio operators. Killed in there tragedy were Mission Commander Rick Husband, and Pilot William McCool.  Also lost were Mission Specialists Michael Anderson, David Brown KC5ZTC, Laurel Clark, KC5ZSU, Kalpana Chawla, KD5ESI and Israeli Payload Specialist Ilan Ramon.  Ramon was a well-known Israeli Air Force pilot became the first man from his country to fly in space.

Columbia was at an altitude of about 203,000 feet over north-central Texas and traveling at 12,500 mph, when Mission Control lost all contact and tracking data.  It was about 9 a.m Eastern time. That was almost the same moment when residents in the Dallas area reported hearing a gigantic sonic boom.  The loudest anyone had ever heard.  Witnesses who looked up reported seeing a bright flash followed by smoke plumes streaking across the sky.  Several people grabbed their home video cameras and caught the tragedy.  Tape shows debris appearing to break off into separate balls of light and falling back to Earth.

What actually happened is still very much unclear.  The shuttle is essentially a glider during the hour-long decent from orbit.  It is covered by some 20,000 thermal tiles to protect against temperatures as high as 3,000 degrees.

The space agency is already looking at a liftoff incident where a part of the center fuel tank's foam insulation broke away and impacted one of the Columbia's wings.  NASA saus that just before it disintegrated Columbia experienced an abnormal rise in temperature and wind resistance.  That forced the shuttle's automatic pilot to make rapid changes to its flight path.  Some experts say that this is possible evidence that some heat-protection tiles were missing or damaged.

Administration officials said there was no immediate indication of terrorism but accounts from those on the ground have lead to speculation of a explosion somewhere on board the orbiter.  Others say the abnormally high sound level was the result of multiple pieces of Columbia all breaking the sound barrier at slightly different times and creating an ongoing sonic boom.

Debris from Columbia fell along Northern Texas and into Louisiana.  NASA declared an emergency after losing contact with the crew and sent search teams to the Dallas-Fort Worth area.  It also warned people to stay well clear of any debris field they might encounter because of chemical contamination from the very toxic fuel.  But that was easier said than done.  Residents of the town of Nacogdoches say they found bits of metal strewn all across the city and a local dentist reported that a metal bracket about a foot long crashed through his office roof.

STS-107 was NASA's 144th shuttle mission.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

On January 28th, 1986, the space shuttle Challenger exploded shortly after liftoff but in 42 years of U.S. human space flight, there had never been an accident during the descent to Earth or landing until now. NASA has grounded all of its space shuttles, but there's no word yet that the Columbia tragedy will affect the current Expedition 7 crew's future aboard the International Space Station.  (ARNewsline™ from published news reports)

**

HAM RADIO IN SPACE:  TEXAS HAMS ASSIST IN SHUTTLE DEBRIS HUNT

Amateur Radio played a signifigant role in the debris recovery efforts after Columbia broke up over Texas.  Amateur Radio Newsline's David Black, KB4KCH, has that part of the story.

--

A family member gets a close-up view to the tragedy.  One of the Columbia's heat protective tiles was found near my nephew's college dorm in north central Texas.  My newphew took a picture of it, which you can see on the Amateur Radio Newsline website.  While the tile survived re-entry, the Columbia did not.

Within hours of the accident, Amateur Radio Emergency Service volunteers with the Nacogdoches Amateur Radio Club began helping Emergency Management officials and NASA teams in locating and cataloging debris falling from the shuttle.

Tim Lewallen, KD5ING, is the Public Information Officer for the Nacogdoches Amateur Radio Club.  He says the hams worked in tandem with students from a local college's Geographical Information Systems lab. Together, they surveyed the city and county looking for shuttle debris. When any was located it was photographed and its exact position determined using a G-P-S.  The data was later downloaded into a database that will be superimposed over terrain maps. Local officials say debris was found in nearly 2,000 sites, including some 1,200 places in Nacogdoches County.

As we go to air, well over 12,000 pieces of Columbia had been found, from as far west as New Mexico eastward into Louisiana. NASA hopes the position of the debris field will give it some insight into what caused Columbia to disintegrate.

Reporting for the Amateur Radio Newsline, I',m David Black, KB4KCH.

--

Lewallan says that the entire effort was coordinated by the ARES group. He adds that ARES volunteers were also directed to coordinates given by NASA that the space agency believed might contain missing parts of the Columbia. The recovery and cataloging effort went on for several days. (Nacogdoches Amateur Radio Club via KD5ING)

**

HAM RADIO IN SPACE: AMSAT MOURNS COLUMBIA LOSS

Its no secret that Amateur Radio and the space program have had a very close association since the very first Orbiting Satellite Carrying Amateur Radio or OSCAR was launched back on December 12th 1961. It was carried into space by a United States built Thor Agena launch vehicle from Vandenberg Air Force Base in California. OSCAR 1 was a tiny 4.5 kg package that made only 312 orbits before re-entering the Earths atmosphere. But it set the stage for four decades of ham radio in space. A lot of it took place from the space shuttles including Columbia. In fact it was from Columbia that ham radio's first man in space, Owen Garriott, W5LFL, talked to a senator and a king:

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

And so it was when news of the Columbia's demise began to settle in that the representatives of AMSAT groups from around the world began paying their respects. Perhapps none was more poignant than the words of AMSAT North America President Robin Haighton, VE3FRH. His statement is read by Amateur Radio Newsline's Newsline's Henry Feinberg, K2SSQ:

--

"It is with great sadness that I have learnt of the Columbia disaster. AMSAT has always been a strong supporter of the Shuttle program and of ARISS. We have had many interactions with the astronauts who have fearlessly ridden the shuttle into space. Currently several are AMSAT members and supporters.

On this sad occasion on behalf of the Board of Directors, Officers and

Members of AMSAT, I wish to send our deep sympathy to the families, relatives and friends of those who undertook this Columbia mission. Their understanding of the risks taken on this and other missions did not prevent them from performing at the highest level, and, unfortunately paying the ultimate price.

To our friends at NASA, we at AMSAT send our understanding and our sympathy,
knowing that the exploration of space and carrying out important experiments
for the benefit of humanity will continue to be your mission."

--

AMSAT France, AMSAT Germany, AMSAT Itlaly, AMSAT Sri Lanka and other AMSAT groups the world over also offered words of condolence an consolation.

Frank H. Bauer, KA3HDO, the Chairman of ARISS International issued a statement that read in part -- and we quote: "This is a difficult time for all of us. Let's work together to keep the torch of space travel alive in the hearts and spirits of humans worldwide. And most importantly, please keep the astronauts, their family and friends in your thoughts and prayers." (AMSAT-NA, ARISS, others)

**

Break 1

>From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the W4BBB Radio Amateurs Club of Knoxville repeater serving Knoxville Tennessee.

(5 sec pause here)

**

RESCUE RADIO: TENNESSEE HAMS HELP AFTER TORNADO

The January 8th issue of the Knoxville News-Sentinel tells the story of Sheila Tailent, KB4G, and how she came to the rescue after a tornado ripped through Morgan County Tennessee. Tailent is the state ARES coordinator realized a need to provide reliable communications following the storm. Thanks to her efforts, within 15 minutes after the twister struck hams with emergency communications gear were on their way.

According to the News-Sentinel, for the next 48 hours ham radio volunteers relayed communications among police departments, firefighters, rescue squads, demolition units, repair crews the Red Cross and many others. The article says that dozens of radio amateurs worked around the clock with many taking vacation days from work and donating the time to the community.

The newspaper says that a conservative estimate of the value of the communications provided free of charge by hams to Morgan County could be upward of $80,000. (W5YI Report)

**

RESCUE RADIO: BE PREPARED - PART 2

The Columbia tragedy and the Morgan County tornado are two incidents that again bring home just how important it is for ham radio operators to be prepared. The ARES members in Nacogdoches Texas had no idea that their training would involve them in trying to find out why a space shuttle fell from the sky. But thats excatly the role that they played -- and continue to play.

Last Week, Lloyd Colston, KC5FM, was here to explain the importance of emergency preparedness. Now says Colston, its time for some personal preparations:

--
Audio only report. Hear it at http://www.arnewsline.org
--

Lloyd Colston, KC5FM, is with the Mayes County Emergency Management in Pryor Oklahoma. He will be back from time to time with other tips on how hams can be ready for any emergency that may come their way. (KC5FM)

**

RADIO LAW: FCC AND NTIA TO IMPROVE FREQUENCY COORDINATION

The FCC and the Commerce Department's National Telecommunications and Information Administration have signed a new Memorandum of Understanding on spectrum coordination. According to the C-G-C Communicator, the agreement calls for the FCC to responsible for non-federal frequency users such as broadcast, commercial, public safety and even Amateur Radio. The N-T-I-A will hold responsibility for all federal government users. The full document is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-230835A1.doc (CGC Communicator)

**

SPECTRUM ISSUES: FCC REALLOCATES SPECTRUM FOR NEW WIRELESS SERVICES

Also from the C-G-C Communicator word that the FCC has reallocated 30 megahertz of spectrum from the 2 GHz Mobile Satellite Service to fixed and mobile services. The purpose is to provide frequencies for a variety of new wireless applications. The Commission is seeking comments on potential uses of an additional 15 megahertz of spectrum previously identified for new wireless services. It also wants comments on increased flexibility in the Unlicensed Personal Communications

Service band. This too is on the web. You will find it at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-230754A1.doc (CGC Communicator)

**

CONVENTIONS AND HAMFESTS: SUPERFEST 2003

A-E-S has gotten it's Superfest 2003 registration form online. The Superfest takes place April 4th and 5th at Amateur Electronic Supply in Milwaukee. To register take your web browser to www.aesham.com and take the link to the Superfest menu. If you need help or have any questions, please contact Molly Schreiber at A-E-S. Her e-mail is molly@aesham.com (AES)

**

HAMFESTS AND CONVENTIONS: RADIOFEST IN SEASIDE CALIFORNIA

The Naval Postgraduate School Amateur Radio Club will host RadioFest 2003 on Saturday, February 22nd. This is a West Coast hamfest and will be held at the General Stilwell Community Center in Seaside, California. The show includes a flea market, vendor booths, demonstrations, license exams, door prizes and more. Among the forum presenters scheduled are Leslie Ragghianti from the 911 Emergency Communications Center, Jeff Orr, K-G-6-K-C-O, discussing "Echo Link" along with Don Carlson , KQ6FM, and Glenn Thomas, WB6W discussing ARES. Sound interesting? For more information go to the web at www.radiofest.org (W6FVI)

**

RADIO MEETINGS: SCADS IN SEAL BEACH CALIFORNIA

Also in the Golden State the Southern California Area DXer's shortwave listeners monthly meeting takes place on Saturday February 15th from noon to 4:00 p.m. Pacific time. The venue is the F&M Bank Community Room in Seal Beach California. This months subject is Radio Communication Listening Worldwide. For more information e-mail Bill Fisher at billfishernow@netzero.net (SCADS)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

## THE FUTURE: HOW TO MAKE HAM RADIO MORE KID FRIENDLY

"How to Make Ham Radio More Kid Friendly" is the topic that Amateur Radio Newsline has chosen for this years Ham Radio Town Meeting and we are looking for some younger hams who might want to take part.

The Town Meeting is held each May at the Dayton Hamvention. This years Hamvention theme is the "Year of the Young" and planners tell us that the three day show will focus on the young ham and on bringing 12 to 18 year olds into amateur radio.

Its no secret that recruiting youngsters into the hobby is getting harder and harder. Keeping most of them is all but impossible. There is organized sports. There are those numerous after school activities. And lets not forget the lure of the World Wide Web with its license free ham-radio like chat rooms. All of this makes it a real challenge to get youngsters licensed and keep them interested.

Obviously the old ways of recruiting young people no longer work. So we are going to take two hours and give you the chance to come up with some new ways.

If you are a young ham planning to attend Hamvention 2003 and would like 10 minutes to present your ideas, drop us an e-mail. We will go through what you send us and some of you might be invited to be a part of our all-star panel.

The best way to contact us is by e-mail. Mark your note Town Meeting and send it to newsline@arnewsline.org. (ARNewsline™)

**

## ON THE WEB: REPEATER LINKING POWERPOINT PRESENTATION

If you are into repeater linking, this one is for you. Kevin Custer, W3KKC, reports over the VHF Reflector on a new Repeater Linking presentation using Microsoft's Power Point Presentation format. It was produced by Douglas Otoupal, N5HYD, is 131 kilobytes in and available at http://www.repeater-builder.com/rbtip/pdfindex.html. (VHF Reflector)

**

## INTERNATIONAL - GREECE: NEW VHF/UHF ONLY LICENSE CLASS

The V-H-F Reflector says that Greece now has its own, entry level VHF only license. The new ticket use the prefix SW1 through SW9 with priveleges on 2 meters and above. SV1 through SV9 prefixes indicate Greek stations that have full High Frequency operating privileges. (VHF REflector)

**

## INTERNATIONAL - GERMANY: DEUTSCHE WELLE DROPPING NORTH AMERICAN SERVICE

Germany's premiere shortwave station says that transmissions to North America will soon cease.  This with confirmation by Margot Forbes of the broadcaster Deutsche Welle that it will be terminating the long running service at the end of March.

Up until now, there have been several claims made by various sources that Deutsche Welle would be shutting down its broadcasts to North America this spring.  The station would not deny or confirm this directly until now.

According to Forbes, the stations budget has been slashed time and time again  by the German Government.  Forbes says that maintaining shortwave transmissions are particularly expensive and the decision has been made to cancel operation on some frequencies.  This includes the very popular transmissions to North America

Forbes says that there are no plans yet for a replacement service.  but says there is the possibility of somthing being worked out using satellite delivery or over the Internet.  (shortwavedxing.com)

**

PROPAGATION:  SA 100 MICROWATT 7 MHZ BEACON HERARD IN USA

And a possible record for a high frequency beacon transmitter.  Over the last 4 months, an extremely low power beacon transmitter has been operating from the QTH of ZS1J at Plettenberg Bay, South Africa.  The measured power output of the 7.029 MHz transmissions is 100 microwatts and reception reports from all over South Africa, up to 1100 kilometers, have been received.   But the big surpriose came on Tuesday January 29th.  Bill Diggens, WA8LXJ, in West Union Ohio made a positive identification of the beacon transmiutter.

Diggens gave it a Readability 2, Signal strength 1 and tone T 9.  He also made a tape recording of the signal received and played it back to amazed South African amateurs on the daily, split frequency net.  A newt that can be found 7.095 and 7.177 MHz in the 40 meter band.  (ZS6AKV)

**

DX

In DX, PS7AB says that Mexiana Island will be on the air May 21st through the 25th.  Five operators will activate Mexiana on 40 through 10 meters on SSB only.  Mexiana is considered the most wanted Islands on the Air group in all of South America.  More information is on the web at http://www.mexianaisland2003.hpg.com.br  (Press release)

**

THAT FINAL ITEM:  HAM RADIO AND THE SPACESHIP COLUMBIA

And finally this week, we like many other Amateur Radio operators around the world felt a special loss following the Columbia space shuttle disaster. As we already mentioned, three of the astronauts on board were licensed Amateur Radio operators. And Amateur Radio has had close ties to the space program, to the astronauts, and to the ill-fated Columbia since the very early days of shuttle flights.

It was on board the Columbia during the STS-9 mission in November of 1983 that Dr. Owen Garriott, W5LFL, became the first person ever to operate a ham radio station from space. In case you have forgotten, this is how that historic contact sounded:

--
Audio only. Hear it in the audio version at http://www.arnewsline.org

--

That QSO marked the first time that astronauts could communicate directly with people on Earth. And they did it without going through the normal NASA's communications channels.

In 1990, NASA, the ARRL and AMSAT formed SAREX -- The Shuttle Amateur Radio Experiment. This was a program to schedule regular contacts between school students and the astronauts on-orbit using Amateur Radio. Astronauts were encouraged to obtain Amateur Radio licenses. Many did and they used them to talk with kids in schools the world over. A lot of those contacts took place from the mid-deck of the spaceship Columbia.

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

In addition to the SAREX contacts, astronauts were encouraged to spend some of their free time making random contacts with hams on Earth. Open contacts they were called and they became a new form of radiosport. A kind of contest with radio amateurs everywhere vying to be the first in the city or neighborhood to talk to a ham radio operator in space.

Then Russia entered the realm of ham radio on-orbit. Amateur Radio gear was installed on its MIR space station and talking with cosmonauts soon became almost commonplace. Who can forget British astronaut Helen Sharman when she visited the MIR and took to the airwaves using ham radio.

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

SAREX has now given weay to ARISS -- Amateur Radio on the International Space Station. But it all had to have a beginning and from its earliest days on-orbit until it disintegrated in the sky above Texas the space ship Columbia and ham radio have shared history together. Now the Columbia is now gone, but the world of Amateur Radio will never, ever forget it or the seven human beings who were on it when it met its firey demise. (From the combined thoughts of the worlds radio amateurs as posted to various Internet remailers, by e-mail and numerous other sources.)

***

Neotek Esprit for broadcast and television production.

48 Mono mic/line inputs modules. (8  with sub/group summing amp)
Inputs: eligible 2 mic and 2 line.
Eq: 4-band paramatric, fixed and sweep HI-pass.
Aux: 6 mono and 1 stereo.
8 bus/group assignment and 2 stereo bus.
Pre/post PFL, direct out with level, mix minus, insertion point in/out and pre/post eq switches.

8 Stereo line input modules.
Inputs: eligible 4 stereo line.
Eq: fixed 4-band and fixed HI-pass.
Aux: 6 mono and 2 stereo.
8 bus/group assigment and 2 stereo bus.
Pre/post PFL, direct out with level, mix minus, insertion point in/out and pre/post eq switches.

56 Fader modules with 100 mm. conductive plastic fader,
4 mute groups and solo in-place.

3 Master faders for A/B stereo buss and main program out.

Advanced talkback system with auto and return talkback functions.

Safety and on-air facilities for live broadcast production work.

40 segment VU/PPM bargraph on every input modules, 40 segm. VU/PPM for mix A/B stereo out and
NTP 177-800 PPM bargraph, needle VU and phase meter for program stereo outputs.

Internal patchbay with total 1024 Bantam metal patch holes.

Frame 3.790 mm. long with 19" space in centre for communications and script/manus space.

Dual power supply

All in and outputs are electronically balanced.

All interconnection trough 120 pin Elco/Edac connectors.

The console is 9 year old and are in extremely good condition, the finish as new.

Price intication
SKR  250.000
EUR  27.000
USD  27.000

```
GBP  17.000

Packing and freight charges I not including.
The console is located in Sweden.

Having lived in San Diego for 8 years I've found that not to be true.
However, since the decisions that govern all coasts are made in
Washington, it seems like a good place to be. David's show deals with
more than just the mechanics of computers and communication.

I've been a guest on David's show many times and not once have we discussed how to assemble a computer. It's always been about legal, regulatory and philosophical issues.

Rich

>I worked at a non-com in the late 60's early 70's and we had to log transmitter readings every 15 minutes.<

That might have been a rule at your station, but it was not an FCC rule. During that time the FCC mandated readings every 30 minutes.

Tapping the meter panel or recording the difference between tapped and untapped meter readings was not mandated either, unless not tapping it resulted in faulty readings. I dare say, however, that if an FCC RI saw an operator tapping a meter, he might well have asked "why hasn't that been logged and fixed?"

The one meter-reading bugaboo which used to trap a lot of operators was the requirement to take any reading that was affected by modulation without modulation. Some stations had an audio-short button, which would remove modulation as long as you held it down, so that you could get a proper reading. Most that I know of made the operator wait for a silent period in the programming.

Thanks for the replies! :-)

I guess here in The Philippines we have an interesting combination where we use North American odd-numbered tuning for FM (but using 50 microsecond pre/de-emphasis) and 9khz tuning for AM.  As an aside, The Philippines may turn out to be the next country after the US to use IBOC for digital broadcasts (which i hope doesn't happen)

thanks! i think now i'll go ahead and get a minidisc recorder. now i've got to decide whether to get a consumer model or pro (my station uses a consumer model, which the engineer doesn't like). i'm definitely leaning toward pro.

pat

This working reporter seconds that motion.  DAT is an expensive pain
in the ass.  My newsroom uses MD in place of both RTR and cassettes.
They're just fine.

Sorry...I just had to let off steam. All my life ALL entertainment, news, commentary, and societal decrees have come from the east coast. The word "live" is always followed by "except on the west coast". "Join so and so for live chat on the Internet after the show (except on the west coast)."

Presidential addresses are given at five PM when all of us lefties are stuck in freeway traffic, but when New Yorkers are comfortably seated in front of prime time TV. Oh, and at eight o'clock our time, we get to watch an old movie...after all, if the New Yorkers missed the prime time show, we can't see it either.

Got a talkshow? Even if it is about high tech, Washington is the center of the universe. Silicon Valley (where I live) doesn't mean squat. I can see why the Federal government acts as though the west coast doesn't exist: the media doesn't recognize it. If California fell off the continent tomorrow, I doubt anyone in the heartland would even bother to throw us a rope. (That became VERY evident during our energy crisis.)

OK...I feel better now. I'll go back to quietly watching my tape-delayed everything. And I need to get my tax return mailed. At least Washington remembers the money we send in every year even if we don't get anything back in return.

Continue to enjoy our wine, movies, technology, and our bountiful harvest, by all means. Best wishes from the colony of California.

[Grumble]

Pro machines are usually built to higher specifications and with better materials than the consumer stuff that is built down to a price. They're also built to withstand the knocking around given by news gatherers, etc.

That's not always the case...though.

I feel your pain. When I lived in San Diego I resented the network news local cut-ins by a Los Angeles anchor if a story had changed in the 3 hours since the Eastern feed.

Imagine how irritated I was when I spent time in Homer, Alaska and watched Johnny Carson at 6:30 or so (forgotten the actual difference). Carson with the sun shining just wasn't the same. Since the sun shined until midnight not much was the same. In the Winter watching 2PM programming  in the dark was eerie, too.

Be comforted in knowing that all the taped sitcoms have a "live" West Coast" feed so you can see "Moisha" at the same clock setting as the East. Just don't accept phone calls from East Coast friends who can tell you what the outcome of The Bachelor is.

The strangest thing for me was living in Dallas where there was a constant crawl on screen warning of a tornado watch/warning or severe thunderstorm warning. It was enough to cause a Yankee from Boston to lose bladder control. I had an MGB that was low to the ground. Dallas thunderstorms raised the water level within minutes nearly to my door.

At ABC Radio we had 3 separate commercial feeds so an advertiser could run his spot at the same time across the country (except mountain), regardless of the programming.

You see, we make allowances for the West Coast.

You do have an advantage, though. Your tax return is due 3 hours later than ours.

Rich

I need a scematic for Alesis studio 32 mixer

the unit oscillates when you first turn it
on in the LR monitor output section for about 30 minutes then quiets down.
Then throughout the day it will either go silent for a second or chirp --
what a pisser !

Just as bad are the parts and tech support
who dont answer email - A phone call says they cant sellthe schematic . Keep
that in mind when you buy something for your stations .

Yep.

> I hope they get it on the air soon! Seems like they've been having nothing
> but trouble. :D

Mainly from the authorities.
As I understand and this is not official, they have granted a building
permit (?) to construct a platform with an antenna off the coast of IO
Man. There were objections but I guess that they have been rejected.
This implies that the way is open for them to actually build the station
and get it on the air.

Amateur Radio Newsline™ Report 1323 – December 20, 2002

Amateur Radio Newsline report number 1323 with a release date of Friday, December 20, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Newfoundland joins the 5 megs experiment and Guam’s ham radio community is reported safe following a super typhoon.  Find out more on Amateur Radio Newsline report number 1323 coming your way right now.

(Billboard Cart Here)

**

## HAM RADIO TECHNOLOGY:  NEWFOUNDLAND JOINS 5 MEGS EXPERIMENT

The 5 megs experiment is growing once again.  This, as hams in Newfoundland come on board to try their hand at propagation on what may wind up as a future ham radio band.  Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--
VO1MRC, the Marconi Radio Club of Newfoundland club station, has received experimental authorization to transmit CW and upper sideband on seven spot frequencies around 5.3MHz for three four-day periods.

The next session is from the 20th to 23rd of December inclusive and the frequencies that VO1MRC can use are 5260, 5269, 5280, 5290, 5319, 5329 and 5400kHz. The experiment is to look at the differences in ground wave and sky wave propagation on 3.5, 5.3 and 7mhz.

Jeramy Boot, G4NJH.
--

The original 5 megs experiment began several months ago in the UK. It required British hams to get special temporary authority to use the band. The experiment proved so popular and so many hams applied that British telecommunications regulators had to put further permits on hold until they could reassess the impact to the band. (GB2RS)

**

RESCUE RADIO: SUPER-TYPHOON HITS GUAM - HAMS AFE AND OPERATING

Reports over a popular ham radio website that the territory of Guam was hit by a "Super Typhoon" on Sunday December 8th. And while no stations from Guam have been heard here in the United States, reports over the Internet say that everyone is O-K. We have more in this report:

--
Duncan Campbell, KF6ILA portable KH2 lives on Guam. He says over the QRZ website that the typhoon packed sustained winds of 160 miles per hour with gusts topping 190 miles per hour.

News reports pick up from there. They say that the storm damaged much of the island's infrastructure including electrical power and knocked out wired and cellular telephone service. And Campbell’s posting adds that along with the loss of electricity and water, the port of Guam was the scene of a major fire that destroyed the reserve tanks of fuel used across the island. The blaze started during the storm and the island is now low on gasoline. He says that the sale of the remaining fuel is restricted to emergency vehicles only.

With the clean up now underway the good news is that all the Amateur radio operators on Guam are believed to be safe. Campbell says that several hams are known to have lost their antenna systems and the islands only repeater was also blown off the air. This, the result of the collapse of a nearby cellular telephone tower striking it as it fell.

KF6ILA says that some hams are already back on the air handling post storm related communications. All operation is on the high frequency bands centered near 14.310, 21.375 and 28.520 MHz. Another frequency -- 7.085 MHz is supposed to be used for emergencies but so far no stations have been heard.

By Sunday December 15th, Andersen Air Force Base and part of hotel row in the town of Tumon had power restored. But news reports say that other parts of Guam could remain blacked out for a fairly long time. And even though its almost two weeks since the storm hit, if you hear ongoing emergency or storm related communications please give it priority over any other use you might have for the frequency.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News Australia.

--

A little more information comes from the Guam Pacific Daily News.  It says that that the Red Cross and Salvation Army are on Guam providing post typhoon relief.  Also, that the Red Cross service center has already processed over 200 requests for disaster assistance.

Meantime, another poster to QRZed says that he arrived in port at Guam on December 14th.  N6HPX says that the repeater is back up and operating on 146.91 MHz, but there is nobody on the air using it.   (QRZ, Q-News, others)

**

RESCUE RADIO:  NEW SALVATION ARMY STATION

Speaking about the Salvation Army, word that it and the Oklahoma City Autopatch Association hosted the grand opening of the Salvation Army Emergency Communication Center.  It took place in Oklahoma on Saturday, December 14th. The new center is located at the Salvation Army Citadel on SE 44th Street in Oklahoma City.

Frank McCollum, N5FM, the station trustee, held the first net from the new facility at 9 am.  McCollum helped to establish the first station in 1986, at The Salvation Army's Arkansas Oklahoma and Divisional Headquarters where it remained until two years ago.

The new station features very modern gear.  It is designed to  allow multiple High Frequency, VHF and UHF stations to provide ongoing communications services at the same time.  (WA6LBU)

**

ENFORCEMENT:  FCC CLEARS CT TESTING

Turning to enforcement news, the FCC has closed the books on its audit of a Connecticut VE testing session.  The good news is that no violations of any rules were uncovered.  The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth:  “The Enforcement Bureau has informed the ARRL that it has concluded its audit of the Trumbull Connecticut test session of May 10 2001 and found no wrong doing by the VE’s.  The Bureau cautioned the ARRL however, that when the number of VE’s exceeds the number of test candidates, control and supervision of a test session is more complicated.”
--

The FCC says that all ten V-E’s did follow proper procedures while administering the exam.  It also thanked them for their cooperation in resolving the matter.  (FCC, RAIN)

SPECTRUM ISSUES:  REVISED 6 METER BANDPLAN IN SERA TERRITORY

The South Eastern Repeater Association's Repeater Journal says that there is a revised 6 meter bandplan in place for repeater operation in states that it oversees.  Under the new plan the 15 repeater pairs using 2.51 MHz offset have been eliminated.  This is because the outputs of the 2.51 MHz spaced repeater pairs fell on the 20 Kilohertz spaced channels from 53.71 to 53.99 MHz.

The South East Repeater Association says its goal is to simplify the bandplan for 6 meters.  The revised plan calls for 15 repeater pairs using 500 kHz offset and 20 kHz spacing with outputs from 51.70 to 52.92 MHz and 39 channel pairs using 1 MHz offsets and 20 kHz spacing outputting between 52.01 to 53.99 MHz.  The few repeaters originally coordinated using the 2.51 MHz offset are being grandfathered and allowed to continue operation under the old system.

The South Eastern Repeater Association is one of the nations largest all-volunteer repeater councils.  It provides coordination services for repeaters in Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia and West Virginia.  (SERA Journal)

**

SPECTRUM ISSUES:  ADDITIONAL BANDS FOR UNLICENSED DEVICES

The FCC says that it is seeking  comments on the possibility of permitting unlicensed transmitters to operate in additional parts of the electromagnetic spectrum.  According to Bob Gonsett's CGC Communicator, the regulatory agency specifically wants  comments on the feasibility of allowing unlicensed devices to operate in the TV broadcast spectrum.

But that's not all.  CGC says that the Commission is also looking for comments on the feasibility of permitting unlicensed devices to operate in other bands and at power levels higher than other unlicensed transmitters.  The FCC believes that advances in computer technology make it possible to design equipment that could monitor the spectrum to detect frequencies already in use.  This says the FCC would ensure that transmissions only occur on open frequencies.  So far, no Amateur Radio service frequencies have been specifically targeted by the proposal.

More on this issue is on the FCC website at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-229400A1.doc (CGC Communicator)

**

## SPECTRUM ISSUES: NEW BANDS FOR EMERGING TECHNOLOGY

Also from the CGC Communicator comes word that the FCC has allocated 90 MHz of spectrum for advanced wireless services. The bands in question are from 1710 to 1755 MHz and from 2110 to 2155 MHz.

The FCC indicates that this spectrum could be used by current cellular and PCS licensees to expand their capacity by offering wireless voice and data services such as 3 G. Or it might be used by others to support the development of entirely new applications that are distinct from existing offerings. Either way, the FCC is seeking comments on licensing, technical, and operational rules.

More is on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228237A1.doc (CGC Communicator)

**

## NAMES IN THE NEWS: ROCK STAR GIVES MAJOR DONATION TO ARRL BIG PROJECT

Some good news on the ham radio education front. The ARRL Letter says that rock entertainer Joe Walsh, WB6ACU, has made a major contribution to ARRL's Education and Technology Fund.

According to the Leagues Chief Development Officer Mary Hobart, K1MMH, the significant gift through the Joseph F. Walsh Foundation. Hobart says that it will fund an additional eight pilot schools in the ARRL Education and Technology Program.

Walsh is best-known as a guitarist, vocalist and songwriter with The Eagles and The James Gang. He has been an active Amateur Radio operator for more than 37 years, is an avid collector of vintage radio gear and a longtime friend of Heil Sound’s Bob Heil, K9EID.

The amount of Walsh’s donation was not made public. An up-close and personal profile of WB6ACU appeared in the November issue of C-Q Magazine. (ARRL)

**

## NAMES IN THE NEWS: REPEATER COORDINATION PIONEER NAMED NEVADA SM

A ham who helped to pioneer repeater frequency coordination in Southern California has been named as the new ARRL Nevada Section Manager. Amateur Radio Newsline has a look at Dick Flanagan, W6OLD.

--

Dick Flanagan, W6OLD, is replacing Jan Welsh, NK7N as Nevada Section Manager. According to an ARRL release, Flanagan, a resident of Minden Nevada was the recipient of the ARRL 2000 Excellence in Recruiting Award and was active in the successful effort to secure an Amateur Radio antenna bill in Nevada.  But long before that -- back in the early 1970’s, W6OLD started his ham radio political career while still a resident of Los Angeles California.

It was in 1971 that W6OLD helped to create the famed Southern California Repeater Association or SCRA.  He also served several terms of office with that group.  And it was during his tenure that SCRA pioneered many innovations in the area of repeater coordination and dealing with the FCC on repeater related issues.  And under Flanagan’s leadership the SCRA worked out a frequency sharing scheme with Baja California Mexico that still  remains in force -- essentially as negotiated -- more than two decades later.

Since moving to Nevada W6OLD has held a number of positions in the ARRL Field Organization.  This includes ARRL Official Observer, Official Emergency Station and ARRL VEC volunteer examiner. Most recently he has also been serving as an assistant Section Manager.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that Welsh is stepping down at the end of the year for personal reasons.  (ARRL, SCRA Archives)

**

## RADIO PUBLICATIONS:  WRTH 2003 NOW AVAILABLE

The new 2003 edition of the World Radio and T-Handbook is now available. Better known as WRTH, the latest edition contains the details of most broadcast entities plus details of transmissions made in the English, French, German, Spanish and Portuguese languages.  To find out more, take your web browser to www.wrth.org   (WRTH)

**

## RADIO REMEMBERS:  STAMP COLLECTING OPERATORS

The Radio Stamp Operators Group reminds us that a year ago, on November 15, 2001, the Japanese Postal Service released an  80-yen postage stamp honoring the 50th anniversary of commercial  radio and TV in that country.  The stamps depict the images of the microphone used when commercial radio  broadcasting began, the first monochrome television camera used for  commercial television broadcasting, and at television set up for street  viewing.  More information on radio stamp collecting is on yahoogroups at radiostamps@yahoogroups.com (RSG)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

THE ARNEWSLINE SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, the administrator of the Amateur Radio Newsline support fund, Andy Jarema, N6TCQ:

--
With the holiday season upon us, I need to ask you to add one more name to your gift list. Of course I'm referring to Amateur Radio Newsline.

Without going into a bunch of numbers that will bore you, let's just say that we will end the year with a deficit and it will grow in months to come. That is unless you, the Amateur Radio Newsline listener step up to help.

What we need is immediate support so we can pay the back bills and ongoing support to prevent any back bills. And only you can make it so.

Remember, Amateur Radio Newsline is a federal 501 (C)(3) not for profit orporation and donations to it are tax deductable. This is an excellent way to do some end-of-year "window dressing" on your personal or club's taxable income.

The address is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California. The zipcode is 91066.

If you missed that address don't worry. It will be repeated in the close of this weeks report.

Andy Jarema, N6TCQ

--

Thanks Andy. (ARNewsline Support Fund)

**

EMERGING TECHNOLOGY: BOSTON TV STATION DISRUPTS POLICE SYSTEM

A Boston-area TV station's new 24-hour-a-day digital transmitter is disrupting Camden County New Jersey police communications over 100 miles away. Amateur Radio Newsline's Ken Locke, N8PJN, fills us in:
--

The South Jersey Courier-Post newspaper says that twice last summer, the new digital transmitter used by WCVB in Boston Massachusettes interfered with field communications to Camden County's communications headquarters in the town of Lindenwold. The town's leaders want the problem to go away.

By way of background, WCVB began broadcasting its Federally mandated digital television signal on Channel 20 in 1998. But the problem in the currently shared 506 through 512 megahertz band did not show up in Southern New Jersey until this year. In January WCVB began full time, round-the-clock digital programming. A summertime conditon hams call tropospheric ducting is being tabed as the cause of the interference.

A duct acts kind of like an R-F tunnel from one geographic area to another. This one is putting South Jersey in Boston's back yard and vice versa during the warmer months of the year.

Engineers seem to agree that the police or the television station will have to move frequency. The big question is which one will make the change. New Jersey Congressman Rob Andrews met with county representatives and is now working to arrange a meeting between them and the FCC in Washington. They want the station to move.

But some consultants and communications lawyers feel it will be the county thats told to change frequency. They say that broadcasting is mandated the spectrum on a primay basis.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.
--

The bottom line. This one looks as if it could become a political football for the FCC. (South Jersey Courier-Post , Portland SBE, KB4KCH, others)
**

## HAM RADIO IN SPACE: SPACE STATION ACTION PLAN APPROVED

The leaders of the five space agencies that are partners in the International Space Station have approved a new operating plan for the orbital outpost. Meeting in Tokyo Japan, the group has approved. Among the more important items to Amateur Radio is increasing the number of permanent crew members so that research projects can proceed more swiftly. More people on-board the ISS means an increased chance or QSO's.
Right now, with limited crew resources of three Astronauts research takes a back seat to construction aimed at completing the orbital station. By 2006 that number is expected to at least double if a method of emergency evacuation can first be worked out. The current escape vehicle which is mandatory to ISS crew deployment can carry only three. (Adapted from published news reports)

**

## INTERNATIONAL - CANADA: ONTARIO SM RE-ELECTED

On the International scene, Radio Amateurs of Canada reports that Robert McKenzie, V-E-3-S-J-Q has been re-elected Section Manage of the Canadian Province of Ontario. His next two-year term begins on March 1st.. McKenzie ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL-CANADA: LICENSING RECORD UPDATE

Records maintained by Industry Canada and Radio Amateurs of Canada show that the Canadian callsign database is becoming corrupted by inaccurate information. Radio Amateurs of Canada says that one of the prime reasons for this is the failure of some Canadian Radio Amateurs to advise the licensing authority of address changes.

The rules in Canada that the holder of an Amateur Radio Operator Certificate shall notify the Department within thirty days with respect to a change of mailing address. Unfortunately, this does not appear to be happening in all cases. (RAC)

**

INTERNATIONAL - SOUTH KOREA: INVESTING IN THE WWW

South Korean telephone companies plan to invest the equivalent of $10.9 billion in U-S dollars in broadband networks by 2005. This, as a growing number of people in that nation demand access to high-speed Internet services.

In making the announcement South Korea's Ministry of Information and Communication did not provide breakdowns of the investment plans. It did note that South Korea boasts having the world's highest Internet penetration with more than one fifth of the population having access to high-speed Internet services. (News release)

**

HAM TESTING - SOUTH AFRICA: ZS EXAM SUCCESS

And talk about high exam scores. The South African Radio League has announced that during the October 2002 Radio Amateur Examinations that four candidates achieved the first place in the test. SARL says that each of these applicants emerged with an average of 99% in the overall exam. (SARL)

**

INTERNATIONAL – UK: FOUNDATION LICENSE PARTY

The United Kingdom plans to celebrate the first year of its new Foundation Class license with a big on-the-air QSO Party. The Foundation License for 'QSO Party' for M-3 prefix licensees and their friends on the 1st of January 2003 from 10:00 and 15:00UTC. Operations will be on 40 meters around 7.070 MHz, plus or minus any QRM. (RSGB)

**

DX

In DX, word of a new station on from the Sudan. His name is Marco.  His call sign is ST1MN, and he is reportedly will be active on all of the High Frequency bands through the end of June 2003.  (RSGB)

Also, VK8AN will be active as 4W6AN from Dili, East Timor.  This, from around the 19th of December through the end of the year.  Due to limited notice he will only be running about 15 watts to a dipole or groundplane antenna.  QSL only via VK4AAR.  (Via e-mail)

**

THAT FINAL ITEM: THAT FINAL ITEM:  STAR TREK -- HERE WE COME

And finally this week a story about the ultimate form of communication.  About sending yourself electronically to anyplace you might want to go.  Bill Pasternak, WA6ITF, has the far out story of science fiction on its way to becoming science fact:

--

As incredible as it may seem, a Star Trek like transporter may be a  step closer to reality.  This, after physicists in Denmark make two samples of trillions of atoms interact at some distance.

The experiment involved a science called quantum entanglement.  This is a mysterious theory of a controlled spiraling of two or more particles without any physical contact.  Scientists say that these entangled states are needed for quantum computing and for teleportation.

Before the team at the University of Aarhus made its breakthrough other scientists had successfully developed entangled states of a few atoms.  But the scientists in Denmark have now done it with very large numbers.

At the moment nobody is about to teleport anyone, anywhere.  But the research, which was reported in the science magazine Nature makes the idea of instantly transporting an object from one place to another less far fetched.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

We know you are waiting for the obvious tag line, so we won’t disappoint you. If all goes well, maybe the term “Beam me up - Scotty” will be reality in our great, great, great  grandchildrens lifetime.  The only question is whether or not a 5 word per minute code test will be required to “communicate” using that rather exotic mode.  (Future Technology)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio

Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. There ya go.
I got so I could make coffee in the same amount of time, too. Doing
country radio you had to learn such skills.

Yep. And how to encode the song data on the cue track so your air wouldn't sound like someone was downloading x-rated pics from the local 300 buad BBS.

>You always had a screwdriver in the studio so you could take a fouled-up
>cart apart at a moment's notice.

Yep.  Or, the machine itself in some of the smaller stations.

>You have several old air-check cassettes in a cardboard box in your closet

LOL.

Actually, I have them on reels. Around half of them were cut at 15 IPS.

>
>You still have dreams of a song running out and not being able to find the

Nah. My biggest nightmare is  finding out the other turntable motor is burned out, just as the first song ends.

>
>You run a phone contest and nobody called, so you made up a name and gave
>the tickets to your cousin.

Never had that problem. However, after moving from one station to another, I once did a contest and gave out the phone number of the station I'd been working at the day before.

Yes. The logs were the size of a tabloid newspaper. Exact times were intitally required. Later, if the spot ran as scheduled, only a check mark was required.

>One more thing....at sign on, one had to call the transmitter and make sure the
>engineer was there to cut it on....

The smaller stations I worked for had the transmitter at the studio, so I controlled the transmitter with a 3rd class restricted license. When I graduated to 50kw directionals (XTRA, WOR) engineers were on duty. Only during the past 5 years or so were transmitter engineers eliminated and WOR became totally remote controlled. Since XTRA is in Baja California, Mexico, I suspect the Mexican rules still require engineers.

You mean IBOC?

KROQ in Los Angeles, and the Susquehanna country station in Cincinnati are
24/7, and WOR in NY is running daytime AM.

Had two of them in Hawkinsville Georgia.  One held the currents and the other held the recurrents and oldies.  Gates Carosels held the spots.  I had a 55 almost take my index finger off.  The elevators would occasionally stick.  I was in a hurry and grabbed the pully and gave it a twist.  My finger was caught between the belt and pulley.  It was over in a second, but I still have the scar.  From then on, I used my shoe to nudge the motor pully when it stuck.

Anybody ever start a one-hour tape program, and realize after it's rolling, you only put on a 7-inch takeup reel?
    ...reversed the thing very carefully, and rewound at 7 1/2 IPs, and got

away with it.
    Nelson

Don't know where you found reference to "pulse" in there....but that was a
ratings service.

Yeah, feel real old.
Been in broadcasting since 1973, 30th anniv. in June

SRS news gone????

Sad but also great news.
as we know SRS news will end his loggings service. al other services will stay, only that one will end due the huge amount of work that brings it with it.
But!! There fore Jonny at SRS did put an other service on line.
It is Similar to the Free Radio Network ( www.frn.net ) but than more aimed at the European Public, but of course everyone is welcome.

At the end of week 1 of the year 2003 the normal URL of srs will bring you to that forum
( http://www.srs.pp.se ) but till then you might want to use this one
http://www.srs.pp.se/cgi-bin/teemz/teemz.cgi

This his it's sister page so to speak. : www.frn.net
For both go's, you first have to register to become an member.

Greetings and a happy trail in 2003
Alfred the moderator

very few PD's had the authority.

> You excitedly turn the radio up at the sound of "dead air" on the
> competitor's station.

still do.

> Sales guys wore Old Spice to cover the smell of liquor.

still do.

> You were playing Elvis' number-one hits when he was alive.

and you can still name them.. suspicious minds.

> Engineers could actually fix things without sending them back to the
> manufacturer.

when they could find it on their bench with parts all over from other pieces
they were working on for that last minute broken marti

> You worked for only ONE station, and you could name the guy who owned it.

or her.

> You remember when normal people listened to AM radio, and only "hippies"
> listened to FM.

don't they still do that?

> Radio stations used to have enough on-air talent to field a softball
> team every summer.

and proved it by having a softball team that was 1-10 (we broke better records on the radio)

> You're at least 10 years older than the last two GM's who fired you.

I left before that happened.

> You used to smoke in a radio station and nobody cared.

smoke what?

> You know the difference between good reel-to-reel tape and cheap
> reel-to-reel tape.

you could see the parts of missing oxide on the tape.

> Religious radio stations were locally owned, run by an old Protestant
> minister and his wife, never had more than 20 listeners at any given time,
> and still made money.

UPDATE! They are now retired in Hawaii.

> You have a white wax pencil, a razor blade, and a spool of 3M splicing tape
> in your desk drawer - - just in case.

Doesn't everybody?

> You know people who actually listened to baseball games on the radio.

still do - no TV anymore. The pendelum has swung back the other way.

> You can post a record, run down the hall, go to the bathroom, and be back in
> 2:50 for the segue.

nobody even jocks a show anymore so you can go home in 45minutes, now.

> The new guy you're training has never listened to an AM station. He
> couldn't even name one in his own home town if his life depended on it.

The COL has changed to the bigger town.

> You knew exactly where to put the tone on the end of a carted song.

now, a cart is something you find with a homeless guy.

> You spent most of the time on Friday nights giving out the high school
> football scores. And when they weren't phoned-in, you got really pissed
off.

now you can make them up.

> You never thought twice about drinking from the same bottle with another
DJ.

only if she was a her.

> You only did "make-goods" if the client complained. Otherwise, who cares?

The client even listened to the station.

> Somebody would say, "You have a face for radio", and it was still funny.

It still is - it's one of those things, like the secret handshake.

> Sixty percent of your wardrobe has a station logo on it.

a VERY low number. I still have a pillow with the logo on it.

> You always had a screwdriver in the studio so you could take a fouled-up
> cart apart at a moment's notice.

that could be considered a weapon, now.

> Agents were people like James Bond and the Man From Uncle.

....and they are, again.

> The only interaction between you and someone else prior to bedtime
> is, "Thank you. Please pull ahead to the second window."

I dated her for that.

> Your family thinks you're successful, but you know better.

Nope, they kept wanting me to get a REAL job.

> You played practical jokes on the air without fear of lawsuits.

gee, I wonder what happened with that one?

> You've been married at least 3 times, or, never married at all.

There are very few Real Radio chicks.

> You answer your home phone with the station call letters.

now, it's just in the dreams.

The nightmare was having the song end and you knew you were sleeping but
couldn't do anything about it.

> You used to fight with the news guy over air-time. After all, what was
> more important: your joke about your ex-wife, or that tornado warning?

no contest, the joke! Tornado's already happened by the time the news guy
told you about it - if you HAD one.

> You know at least 3 people in sales who take credit for you keeping your
job.

No, the blame. underneath they were good guys.

> You have several old air-check cassettes in a cardboard box in your closet
> that you wouldn't dream of letting anyone hear anymore, but, you'll never
throw
> them out or tape over them. Never!

How many cardboard boxes, do you still have?

> You still have dreams of a song running out and not being able to find the
> control room door.

sometimes it still happens.

> You run a phone contest and nobody called, so you made up a name and gave
> the tickets to your cousin.

or the girl at the dirve-up :-)

I believe they were useful in the ship/shore service.  Some of the study
guides I had were geared toward that.

I first took 1, 2 & 9 back in '74 and flunked 9.  Went back, passed 3 and 4
and came out with a First in '75.

Yeah, I guess I'm an old DJ having first come on the air at a fairly large network station on Saturday, April 10, 1953--fifty years ago this spring. DJ was probably not the term used in  those days to describe my job. "Announcer" was the term.  We didn't touch the equipment.  The control room operator did all that stuff.

Logging?  At my first station the program log was typed in the traffic department and, as the programming unfolded, the originally log was transcribed _by hand_, all of it, into a blank "actual log" or "as performed" log.  Every second had to be accounted for--no erasures, corrections made by drawing a single line through the error, writing in the corrected info and initialing the change.  It was one hell of a lot of writing that the operator had to do.  But why not?

Except for station breaks (always 30 seconds) and about five hours of localy originated programs per day, everything came from the network.  For example, a 7PM to Midnight announce shift might consist of no more than ten, thirty-second-long station breaks.  Keep in mind, it took _three_ guys to pull this off::  the announcer, the operator, and the transmitter engineer--none of us working hard.  Transmitter remote control hadn't been invented yet.  It came in about 1955, if I recall, no solid state stuff, used of lots of stepping relays and so on.  In fact, no transistors were used in _any_ broadcast equipment in 1953 (when I started).

Microwave from studio to transmitter was unheard of.  The program got from studio to transmitter via Class A equalized telco lines (5 kHz lines) or Class AAA lines (not used much) which were good to 15kHz).  The networks also used telco lines for program distribution.  CBS, NBC, ABC pretty much used the Class A lines to all affiliates.  Mutual used the Class A only to the biggest cities--Class C 3500 KhZ lines were pretty universal with Mutual which is why the network usually had a pretty poor sound (although they _did_ use very cool and very good Western Electric microphones at their main studios at 1440 Broadway)..

In mid-50's I worked as a master control operator for three straight summers at ABC in New York City at 7 West 66th Street in a bulding that was once used as a stable (ABC has moved there from Rockefeller Center where it was once the "Blue" network of NBC and later independent of NBC as "The Blue Network" and still later The American Broadcasting Company.

Operating in master control was interesting.  Two operators were on duty at all times.  We had no sight lines at all to the studio control rooms which, in turn, _could_ see what was going on in the studios (and there were _many_ studios and control rooms.  Coordination between master control and the many live studios and studio control centers was done via an elaborate system of switches, relays and lights.  There was a formal operating manual covering all of this activity.  It's a long one.

WABC (formerly WJZ) was part of our responsibilities.  Someone earlier mentioned checking from the studio to see if the transmitter guy had shown up. Well, we did that and also did an audio check. Believe it our not, WABC was _not_ on all night in those days, certainly not on the Sunday/Monday overnight (Monday mornings were the only early mornings I worked). Anyway, I remember calling "Hello Lodi, Hello Lodi, Hello Lodi" down the line so the transmitter line could be pronounced "checked and OK" and the right level set with a tone after we said the "Hello Lodi" stuff. The WABC transmitter was (is) located at Lodi, New Jersey.

The programs: Almost all day long, soap operas with real live actors, organists, sound effects etc--some titles: My True Story, When a Girl Marries, Whispering Streets and others. The big-deal stuff was at night--The Voice of Firestone, Ozzie and Harriet, some detective dramas and so on. Newscasters and announcers: Martin Agronsky, Don Gardiner, George Ansbro, Milton Cross, Taylor Grant, Alex Drier and Paul Harvey from Chicago, The Breakfast Club (also from Chicago). I've forgotten a lot of the names. Great days, but the system was falling apart by 1957--TV was killing the full-service radio networks. Somewhere in there, ABC hired Martin Block from WNEW, and he put his "Make Believe Ballroom" show on the whole ABC network. It didn't last long and neither, after that, did ABC as an 18-hours-on-air-per-day full service radio network.

It was fun. Hope the above interested some of you.

Nope, but it was heads out.

Luckily it was still in Production (room) at the time. It didn't air like
that.
I was lucky, I learned early on to assume a tape was tails out - but to
check before I got too far into the tape.

Thanks for that wonderful reminiscence, Don.

That's about the time I first got interested in radio. But I was young enough to have missed all of that. Still love hearing about it.

I am coming up on 32 years as morning local guy on KQED-FM. We have the largest audience in public radio and sometimes top the local chart during AM drive.

All I get to do anymore is read funding credits and weather forecasts and introduce traffic reports during Morning Edition but, for the moment it is still local and live, and I still get a kick out of it.

> I first took 1, 2 & 9 back in '74 and flunked 9.  Went back, passed 3 and
4
> and came out with a First in '75.

I flunked Element 9 in Chicago in 1971... took it again Chicago in 1972 and got my first ticket in St Petersburg, FL  in 1974.
As I stated earlier.. I went to a quickie school that taught the answers to the FCC exam.  There I was in 1974 with a first ticket and I hardly knew what a resistor was, but I had to have it to take transmitter reading from a 3 tower directional array.  I later worked at a 100,000 watt FM which also required a first ticket.
I sure have been enjoying reading the posts in this thread... I really appreciated Don Forsling's account.  That was really before my time but I know a lot about the history he discusses.  Recently I have been reading much about the history of NBC's Monitor, which I listened to frequently on WLW as a kid growing up... It really wasn't my thing but my mother loved it.
If anyone else here has an interest in Monitor, here's a pretty neat tribute site: http://www.monitorbeacon.com/.

My first comercial job was for what was then WEAW-FM in Evanston, Illinois. My shift (graveyard) was either religious tapes or foreign language. One night, I put "the Polish Hour" on backwards, and needless to say, didn't notice.

The next day, I was called in, reamed out, and was only saved from getting canned when the Chief Engineer couldn't tell the difference between forward and backwards  when the shop steward challenged him.

The next week, at the top of the tape, I was able to cue it up right after the host of the show said, approximately

"Meester Hengineeer, this iiiis start ooof show, and iiiis going right way."

After getting settled in with the Navy ship to which I was assigned in San Diego in the summer of 1975, I spoke with one of the DJ's at B-100 at the time about the licensing for broadcast radio and how I would go about getting it. He recommended Kaufman's Q & A to study for the test. The book allowed me to take and pass not only Element 1, 2, & 9, but I decided to take Element 8 for the Radar Endorsement, also, since I was still new and was supposed to be working with the radar on board ship.

I was going to go back for Element 3 but because of ship's movement and schedule, I never made it.

To take the test in 1975, the FCC testing office in San Diego was downtown - an easy 2 block walk from where the bus let you off.

But after I returned to New Jersey in 1979, I had to go into Manhattan to Varrick Street for the exam for license renewal. The building was an abandoned warehouse not too far from the WTC. However, by the time I found the office, I had walked from Penn Station to the FCC office, I was exhausted and it was January 1980. I missed passing Element 3 by one question. They didn't even have Element 8 by that time.

To make myself feel better after failing, I went "antenna chasing" to the Empire State Building and from out the window of the 102nd floor I met "Alford". "Alford" gave me an inspiration, and I vowed to take that test the next time and pass it.

In 1985, I applied for renewal, and it came back without Element 9. The FCC started handing out "boxtops" - what an insult!

Since then, they shuffled the tests and licensing around so bad between broadcast and Amateur, I just got to the point that it just wasn't worth it, after all.

But I still like "Alford" and watch it regularly on www.esbnyc.com from the comfort of my home in Florida.

Suspect that was really in Tampa.  The office was either downtown or
Westshore Blvd... (I took it downtown in the federal bulding in 1967 -
passed on the second try as well... Didn't go to the memorizing school,
however.. ) -- Seems to me that Angelo Ditty was the chief of that FCC
office around that time.. At least was up until the 80's when he got
shuffled to Atlanta.

Which 3 tower directional was that?  Up in Clearwater?  Or one of the Tampa
stations? Most of the older stations there were 2 tower directionals like
WSUN or non directionals. At that time WFLA still had studio engineers in
their TV station making the readings. So it wasn't them.  Just sort of
curious which stations you landed at.....

Bill

Thank you Don...that brought back  great memories.  I had worked at WFYI, WVHC and WLIR on Long Island when I started work at ABC New York in 1962.  I started as a Desk Assistant in Radio News on the third floor of the 39West building. Radio Master was on the first floor.

I was in studio 3B with Don Gardiner when he read the flash that JFK was dead. I had handed it to Nick George (who died a few weeks ago) and he gave it to Don.

Martin Block was gone from studio 5B, but his record racks were still on the wall...his office was the WABC News office of Jack Powers.  Turntables were also gone...all music and spots were on Cart, from Collins machines.  The glass wall had been 'broken'...DJ and engineer were in the same room.  The old 5B control room was used for news production.  The Lodi, NJ transmitter was remotely controlled from 5B...but there was still someone manning the xmitter, and maintenance was done on Monday mornings from midnight till 5am when the station was dark.

I became a "Sound Effects Artist" in '64 and worked on "Voices in the Headlines" with Fred Foy and George Ansbro instudio 1A; "Flair Reports" with Jim Harriot, Ted Kopple and Charlie Osgood in 4B.  I also worked on the last radio drama ever at ABC..."Theater Five".  I just bought a CD of "Theater Five" shows on MP3...but the last four minutes (including the credits)  were cut off.  The engineers on that and many other shows were Neal Pultz and Marty Foglia...Jack McCarthy was the engineering ruler of studio 4B.

Harvey, Drier and Breakfast Club still came from Chicago...Quincy How, John Cameron Swayze, Art Van Horn and Don Gardiner from NY...and Edward P. Morgan from DC.

Staff announcers were Milton Cross, Gilbert Hodges, Dirk Fredericks (ex AD Fred Dirk), Joel Crager, Carl Caruso, Scott Vincent,  Bill Brophy, Allan Jeffereys, and many more.

Truly the good old days!

I'm now retired in Peacham, Vermont.

Thanks,
Bob Ring

I'm going to take the guess that it was WLCY. The 3 tower array is next to Channel 10's studios on Gandy Blvd. Later 1380 became 100,000w Q-105's AM - broadcasting in Kahn ISB AM Stereo.

Couldn't resist this...

I pulled the same stunt at KSTT in Davenport, Iowa.  I was PD and was filling in the Sunday morning shift for one of the jocks and got the privilege of running the typical Sunday morning crappola.  We had an hispanic show and it was tails out on the reel. I put it on, started it and potted down the monitor.  We were well into the program when I happened to see the phone flashing.  It was a complaint from one of the listeners.  Frankly, I didn't think anybody listened to that half hour.

Great stories in this thread.  My tape story comes from what was then WTMB-FM in Tomah WI in the early 80's.  We had recorded the local high school Christmas concert for playback.  Whoever recorded it recorded the choir concert on one side of the tape, then flipped it over and recorded the band on the other side.  With every band and choir kid listening, along with their parents, I played it on-air on Christmas Day.  Of course, unknown to me, the control room reel-to-reel was set to play all four tracks in one direction.  About twenty minutes into the thing, during a beautiful choral rendition of a traditional holiday favorite, the band started playing. Backwards.  Frantic, I called the Chief Engineer (a position I would later have there), and he came to the station, walked in the control room, flipped a switch on the front of the tape deck, then walked out muttering something about rookies.

And thanks for your memories too.

You might want to head an exit up the highway and visit the studios of WSTJ, a unique collection of equipment from when the station first went on the air (as WTWN), including the original board, and new CD burners and mini disc players.  Somehow, it all works.  (usually)

Thanks again, to all, for these wonderful memories.

Steve Nichols

Right you are... The FCC office was in Tampa, the school was in St
Petersburg.
The station with the 3 stick array was actually on the east coast in Cocoa.

I never worked there, but did apply for a job, some 40 years ago, and was interviewed by Ed Wheeler.  I understand the reference completely!  :-)

If you can stand one more tape tale...in the late 70s WMAL-FM in DC (now MIX107.3) was automated at least half the day.

One announcer, John Lyon, always tried to do something funny on the slate at the top of his talk-tape for the enjoyment of the board op. He was gifted in being able to speak backwards convincingly.

He once slated the tape backwards (and then recorded his straightforward 25hz toned talk-tape). We had a howl when we watched the AM staff engineer assigned to cue the tape on the automation. He would listen to a few seconds, then dutifully fast forward to the other end of the tape and turn it over, which sounded just the same. Took him awhile!

Lyon once made the mistake of burping loudly during his slate. When the tape was later threaded onto the automation's Revox machine, it cued to the burp instead of the first 25hz tone. That was a treat on the air! And all the talk cuts were one cut off in timing until somebody advanced it!

For sale:

(The "Radio Crazy" is back!)

Partial ownership in fulltime 1 KW AM in NE Miss.
Small city of well over 10,000 population. Less than
100 airline miles from Memphis.

Active or inactive investors with at least $10,000 are
welcome. All investors would be on the board with full
voting rights if desired.

The total asking price is $85,000. No real estate is
included. The station is on the air since the 1940s.

AM bashers, please bash elsewhere! Negative nabobs go
elsewhere with your negativity.

I will not be disclosing city of license and/or
callsign to those who will not completely identify
themselves.

Happy new year.

73,

Meyer Gottesman, W6GIV
Macon, GA

Tel: (478) 741-1710.

http://www.clearchannel.com/radio/

I said in an earlier post of mine that Clear Channel is trying to trick listeners into thinking they are getting a "local" product.  Then I went to CC's website and I see that they do make mention of voice tracking.  They also claim to have a live and local sound.  Anyone in the Philly area take a listen to 104.5 fm and tell me if it sounds live *or* local.

Sorry if the "Clear Channel is evil" thread is old hat in here . . .

Generally, you can tell if it is live or robot.

I don't want to give away all my secrets here, but suffice it to say, there
is not too much difference when it comes to who or what presses the buttons.

August <videographer@yahoo.com> wrote:

> How do you feel about internet radio?  do you see it having a future?

It all depends on what entrepreneurs do with it. So far I wouldn't say it is doing real well. At the risk of using a very tired old phrase, no one seems to be thinking out of the box.

The biggest mistake they make is failing to realize that so-called "Internet radio" isn't radio at all. It is a completely different medium with its own collection of strengths and weaknesses.

It is amusing, however to watch sites pretend to be radio stations.

I have a request on behalf of a colleague who is looking for an alive or dead HF AM broadcast transmitter. Something in the 1-10Kw average power department and with as wide a frequency coverage as possible. Anything considered, alive or dead. I can arrange collection and shipping from most parts. W.H.Y.? Any bible stations with old stock?

Wow, how this discussion brings back memories of the Golden Days of Radio.
I first worked at WNEW on a show called "The High School Hour". It aired (live, of course) Saturday afternoons at 5 and featured talented students from NYC area schools. I was the emcee and it was part of my job to pick up the few 78RPM records played to help fill.
The record were in the next studio where Martin Block hosted "The Make Believe Ballroom" after the 5-minute news from 5:30 to 5:35. ("news-around

the clock prepared by the Daily News, New York's picture newspaper).Block's
record-guy, Joe Franklin, would find me the records and after our show ended
at 5:29:30 I was rush back to return them to Joe before the Boss got there.
One time I was delayed and I was still where when Block came in. He was
wearing a khaki uniform with a .45  on his hip (apparently he had received
threats and wanted to defend himself). When he found me in his studio he
growled at Joe, "get that goddam kid out of here".
I was required to obtain an AFRA work permit to work at NEW and after a few
weeks I joined the union. (I decided that broadcasting was my future).
It worked out well and after I went from radio to TV in Florida I returned
to the Big Apple in 1964 to become a news anchor at WCBS, WABC and WOR-TV
until I retired and came back to FL in 1987.
This was fun. Maybe I'll write a book.
My Best Wishes to all the old guys..
Tom Dunn

>
> Operating in master control was interesting.  Two operators were on duty at all times.  We had no sight lines at all to the studio control rooms which, in turn, _could_ see what was going on in the studios (and there were _many_ studios and control rooms.  Coordination between master control and the many live studios and studio control centers was done via an elaborate system of switches, relays and lights.  There was a formal operating manual covering all of this activity.  It's a long one.
>
> WABC (formerly WJZ) was part of our responsibilities.  Someone earlier mentioned checking from the studio to see if the transmitter guy had shown up.  Well, we did that and also did an audio check.  Believe it our not, WABC was _not_ on all night in those days, certainly not on the Sunday/Monday overnight (Monday mornings were the only early mornings I worked).  Anyway, I remember calling "Hello Lodi, Hello Lodi, Hello Lodi" down the line so the transmitter line could be pronounced "checked and OK" and the right level set with a tone after we said the "Hello Lodi" stuff. The WABC transmitter was (is) located at Lodi, New Jersey.
>
> The programs:  Almost all day long, soap operas with real live actors, organists, sound effects etc--some titles:  My True Story, When a Girl Marries, Whispering Streets and others.  The big-deal stuff was at night--The Voice of Firestone, Ozzie and Harriet, some detective dramas and so on.  Newscasters and announcers:  Martin Agronsky, Don Gardiner, George Ansbro, Milton Cross, Taylor Grant, Alex Drier and Paul Harvey from Chicago,
> The Breakfast Club (also from Chicago).  I've forgotten a lot of the names.
> Great days, but the system was falling apart by 1957--TV was killing the full-service radio networks.  Somewhere in there, ABC hired Martin Block from WNEW, and he put his "Make Believe Ballroom" show on the whole ABC network.  It didn't last long and neither, after that, did ABC as an 18-hours-on-air-per-day full service radio network.

WSB the originating station of the Clark Howard Show, streams
the broadcast using chaincast/streamworks which is not supported
on my platform.

There seem to be a lot of stations carrying his broadcast.
Does anyone know of one that streams it via Realaudio. MP3,
or even a straight windows media?

Also, do any of the affiliates have archives that stream on demand?

Wanted: person to record FM in Cleveland, OH

Hi-
    I'm a radio aircheck collector, and i'm looking for a person to
record some WMMS-FM in Cleveland, Ohio. I will pay for discs or tapes
of the station, or trade copies of airchecks from my collection.
        Thanks, Chris Andrews

Ya gotta figure that before Howard became what he is today, someone must've rolled tape on him from his days at WCCC/Hartford or WWWW/Detroit from the late 70s and 1980.  Any chance that someone who reads this, and who happens to have the tapes, could possibly post them up into one of the Howard Stern binaries newsgroups?  That would be SOOO cool!!

I'm not sure if this has been asked before, but why does AM radio in Europe/Asia tune in 9khz steps while North American AM goes by steps of 10khz? Also, why did some countries like Australia switch from 10khz to 9khz steps some years back?

Thanks for your insights:)

Anyone have a manual for the Sparta A-20B 8 pot audio console they'd be
willing to part with (or know of a source for the same)?

Thanks in advance.

It's a matter of law, based on circumstances and engineering knowledge
and opinion when the law was written. [Not sure if this answers your
real question.]

Easy. You can get more stations with shorter spacing. Didn't happen here because the NAB managed to nix it. It was one of the many elixirs that was going to save AM radio (along with the NRSC mask re-design, AM stereo, and now digital). But broadcasters wanted neither the frequency shake up nor the added competition, so the 9 KHz separation was scuttled.

Sidebar: Broadcasters have never seemed interested in the one thing that would save AM radio.

It is a world standard to use 9 kHz except in the Americas. I don't know when Europe standardized, but by the end of W.W. II stations were on the 9's. In the 70's, I think, they shifted channels but still on the 9 KHz separation.

Australia changed to standardize with SE Asia and to avoid heterodynes form high power stations in the region.

Obviously, 9 kHZ allows more channels on the band... about 12 more in fact.

1975 Geneva agreement, fully in effect by 1979. That agreement also
put Australia on 9 kHz spacing.

The FCC was talking about it but it was scuttled in 1980 or 1981.

high power stations in the region.
>>

Australia and New Zealand were 10 kHz spaced in 1980, but went to 9 kHz shortly thereafter.

Some hetrodyning tests were conducted with KFI/640 and KNX/1070, with their Australian and New Zealand counterparts changing frequency by 1 KHz, and running tests in the mid-pacific.

The results were such that Australasia went with 9 kHz and we stayed with 10 kHz (but at that time many U.S. digitally tuned radios were made with both 10 kHz and 9 kHz), and we expanded the band from 540-1600 upwards. Previously, the band was 550-1500.

Problem is a lot of digitally-tuned (particularly the ones used in cars and the cheaper ones sold in drug stores) are not.  This would render them useless.

However, these are the same radios that can tune either "even" or "odd" FM frequencies -- e.g.: 97.6, 98.8, 100.4, etc.

There are some radios that can't tune in such FM frequencies. The GM Delco car radios I've seen are guilty of that.

Why would anybody, including broadcasters, be interested in saving a
particular technology (unless of course they owned an AM station _and_
lacked imagination)?  Ah, I recall the days, say about 1966, when CATV (we
called it CAT-FIVE) was just getting started, and I was totally uninterested
in it.  I also recall telling coworkers something like, "If I wanted to
distribute programs through wires, I'd join the telephone company."  What a
visionary I was--not.

That said, what _is_ the one thing that would save AM radio?

Best,

Don Forsling

Australia changed on 23 November 1978 according to my field diary of the
time.  That is irrelevant to the current discussion of course!
I do recall listening at midnight one night for a 1kHz heterodyne from a
staton in LA but heard nothing

A SERIOUS revamp of programming and a big marketing push.

We need to shift AM from the jibber-jabber, excessive right-wing talk bastion that it's (mentally) become.

When most people think AM they think: oh it's just talk-talk-talk and religious freaks.

Move it to more middle-of-the road, general entertainment formats appealing to a regional audience (a huge metro area and surrounding suburbs and small towns).  A few popular music formats catering to the 20- to 40-something demographics wouldn't hurt.

Sports-talk is OK for one or two signals since it does also encourage younger listeners (and it seems to be a good biller in huge cities - witness WFAN-AM 660/New York).

Also, AM stations should be limited to a few SUPERPOWERED signals in each major city (50 to 100,000 and up).  Then widen the bandwith of these existing stations a bit (to help the music formats) - get rid of, or change the NRSC mask?

Most of the tiny daytimers and "local" stations in most large cities are just cluttering the band up and causing more noise.  They should be either moved to FM if space permits or the owners should be given tax writeoffs to encourage them to turn these signals off.

I shall be doing some street interviews in the UK next month for possible inclusion in radio program presently under development.

Are there any special legal requirements I need to be aware of. Do I need explicit permission from the interviewee for use of the recording. If so,  is it enough to simply ask and have that recorded as part of the interview?

Are there any other things I should consider?

Cheers.

Mike.

As standard-band stations, yes (actually 1941). However, there were high-fidelity stations in the 1500 to 1600 band, first on an experimental basis in 1934 and later as full-fledged licensees,

See <http://www.cosmos-monitor.com/hist/kc/w9xby.html> for the history of one such station.

Of course, to the consumer it never mattered very much what the spacing was. It only comes into play in the past twenty years or so (and since it was a slow development, less than that), as digitally tuned radios became commonplace. With an analog dial, most people wouldn't notice that if they moved away from their home country, the stations were tuned closer together or further apart; it was easy to compensate. But once digital tuning came into play, that caused problems because a radio set to one standard did not tune the other standard.

Once digitally tuned radios became common, it probably was too late for North America to move to a 9KHz standard, even if there were good reasons for doing so. Making everyone switch radios would have impossible. If the switch had happened in the days of analog tuners, it would have been relatively easy, other than convincing people that they had to retune their radios for their favorite stations.

Michael

There was a 9 kHz seperation but not on all of the band. On top there was 8 kHz spacing.
The problem with Europe is a huge demand for frequencies by state owned broadcasters using immense powers to cover the nations. We also still have LW which has even larger coverage, and even higher powers (up to 2000 kW) are being used.
In the 1975 Geneva convention it was agreed to change the roster by a consequent spacing of 9 kHz for all channels on N x 9 kHz, to allow synhesizer tuners.
This came into effect AFAIR in 1978. In a sort of big bang all frequencies were shifted by 1 or 2 kHz.
Also Afric has this system, but until this day some stations are on the "old' frequencies.
Ruud

In the 70's, I think, they shifted channels but still on the 9 KHz

I've never seen a car radio sold in the USA that could tune the "even"
frequencies. That includes the US "big three", VW, Hyundai, ... ...

>>
The expansion from 1500 to 1600 was in 1940, wasn't it?
>>

Signed in 1939; took effect in 1941.

The same city channel spacing was also changed from 50 kHz to 40 kHz; 540 kHz was added as a new Canadian clear channel; the U.S. clears on 1460-1490 were moved to 1500-1530; new clears were added on 1540-1580 [ * ] ; and 1590 and 1600 became new regionals.

All locals on 1500 were moved to 1490; 1460-1480 became regionals.

In general, all stations were changed by either +0 kHz, +10 kHz, +20 kHz, +30 kHz, +40 kHz or -10 kHz in accordance with a "table"; and out of about 860 stations then licenced in the U.S., only about 80, give or take, were changed as exceptions to the "table".

[ * ] 1540: Bahama Islands Class I-A, U.S. Class I-B; 1550: Canada/Mexico Class I-B; 1560: Cuba Class I-A, U.S. Class I-B; 1570: Mexico Class I-A; 1580: Canada Class I-A.

Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR programming?
Q11. I have some old transcriptions and tapes, how can I make them sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are different. Why?
Q14. Is there anywhere I can get a complete listing of all the episodes in a serial?

Q15. Is there anywhere I can get a written synopsis of the plots or themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

---

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

----------------------------------------------------------------------

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

----------------------------------------------------------------------

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

----------------------------------------------------------------------

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

----------------------------------------------------------------------

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

---

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

---

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

---

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

---

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

> Just to get a little perspective in this controversy, copyrights do expire. Under the old copyright law, a copyright was good for 28 years from the date of first publication, renewable for another 28 years, for a total of 56. Under the 1976 act, those copyrights were extended to 75 years, provided they were renewed. Copyrights under the new law, which took effect on 1 January 1978, are good for the life of the author plus 50 years. Copyrights on anonymous works, works made for hire, etc. are good for 75 years after first publication.
>
> So, since otr has just barely been around for 75 years, little or none of it is in the public domain yet by reason of having been around for a long time. The question of what constitutes publication, and the fact that sound recordings could not be independently copyrighted until the new law took effect add additional complications.

---

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

> The days of radio being ruled by the artisans is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

> I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.
>
> The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.
>
> Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!
>
> Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!
>
> You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you

may have a very good chance of success.

---

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

> For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

> Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

---

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

---

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

---

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog )

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

---

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

---

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

---

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

---

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

---

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

> You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

> I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

> To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..
>
> It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)
>
> On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.
>
> The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.
>
> There is no difference in audio quality using either six hour or two hour mode.
>
> It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.
>
> The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

> Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)
>
> Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

> One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.
>
> I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.
>
> Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

---

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

> If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

---

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

> HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.
>
> WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.
>
> WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in

> the US today) gave me his formula and I've done it many times now and it works:
>
> Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

---

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

> Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build

one of these antennas.  I have built several and I'm no
mechanic.  If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

---

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY  13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

---

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you.

Here is a list of some of the WWW sites for modern audio drama:

Jim French Productions (Imagination Theatre):
http://jimfrenchproductions.com/
Atlanta Radio Theatre Company:
http://www.artc.org
ZBS Media:
http://www.zbs.org/zbs.html
LodesTone Productions:
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop:
http://www.mrtw.org/mrtw

---

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)

```
    Enter only this line in the BODY of the note:
    send usenet/news.answers/internet-services/access-via-email

    To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
    Enter only this line in the BODY of the note:
    send lis-iis e-access-inet.txt
```

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

```
     TO: mail-server@rtfm.mit.edu
     SUBJECT: [blank]
     BODY:
          help
          end
```

----------------------------------------------------------------------

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

----------------------------------------------------------------------

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

> You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).

> They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models, though logic might lead you to the conclusion that the larger capacity ones would cost less.

[Polyline has a website at www.polylinecorp.com, and their new address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

---

Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or Microsoft Explorer, most pages render well with LYNX and associated reader software.

Blind visitors who depend on DOS-based software to access the net, or who use a reading program to audibly display their computer's output might be interested in a program called "Nettamer". The Nettamer home page is at www.nettamer.net/

---

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

> One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

> Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.
>
> When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.
>
> Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.
>
> HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...
>
> If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.
>
> Sorry, there is NOTHING you can do to remove these flaws once they are there.

---

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

----------------------------------------------------------------------

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

> You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

----------------------------------------------------------------------

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

----------------------------------------------------------------------

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

----------------------------------------------------------------------

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call

"OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

---

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:

- Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
- Radio Classics Live, Brockton MA (May)
- Annual Lum and Abner Society Convention (June)
- REPS Radio Showcase (June)
- Friends of Old-Time Radio (October)
- SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

---

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

> There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of

> OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

----------------------------------------------------------------------

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

----------------------------------------------------------------------

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

> The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.
>
> Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day,

Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

---

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

> LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)
>
> It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:
>
> 1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/
>
> 2. Make note of the LOC Call Number and description of the item you need.
>
> 3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.
>
> 4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.
>
> 5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

---

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

---

Of course a two-step switch of the MW band from analog to IBOC to
all-digital would be easy - NOT!!

I am interested in starting a cable-provided radio service in town via
possibly renting or otherwise working out something with the local
"community" TV channel which is often nothing more than scrolling
announcements.

Does anyone have any experience with this and what type of equipment it
requires?

Many thanks,
Luke

That jibber-jabber, excessive right-wing talk is about the only thing that
is keeping AM radio alive these days.
If you look at the #1 AM station in each market (both ratings and billing),
you'll usually find the station at the top of the heap is the one running
Rush or Sean Hannity or one of the 'right-wingers'.
I can't stand to listen to Rush Limbaugh but you have to respect what he did
for AM radio.
What kind of programming would you use to replace this 'jiber-jabber'?

> at that time many U.S. digitally tuned radios were made with both 10 kHz and
> 9 kHz

A friend of mine has an early '80s receiver with digital tuning that uses 9 and 10 kHz channel spacing *simultaneously*. As far as I know it is a regular U.S. model tuner, that was designed this way. As it scans the dial, it will stop on a station and then decide which frequency step is more appropriate -- and not necessarily the "correct" frequency! For example, it will stop on a local station that broadcasts on 710 kHz, and after flipping back and forth between 710 and 711 kHz a few times (as you can see happening on the LED display), it will "settle" on 711 kHz because this provides slightly better treble response.

It's an odd animal to be sure, and may either just be a really weird design, or may have been purposely designed to support simultaneous 9 and 10 kHz AM channel spacing in the event that North America did make the transition to 9 kHz spacing.

Word is going around that KNEW (CNet radio) in San Francisco is going to be changing.

Word at Desmond Crisis' fan site is that CNet will become a radio-on-demand web service, and maybe still on XM, but without any live hosts, and no more 910-AM.

Does anyone here have more detailed information?

Thanks.

Those 20- to 40-somethings grew up listening to FM for their music, if they listened to radio for music at all.  The common belief is that music just doesn't sound good on AMs, plus you have static (something that can never be eliminated completely on AM, as Major Armstrong found out oh-so-many decades ago, and if anything, static sources are even more numerous these days).

If you give them the same music on AM that they can find on FM, there's no good reason for them to switch.  Even if you give them something "different", something compelling that they can't find elsewhere (and, with music tastes being so fragmented, you're only likely to get a small slice of the pie at best), they still might tune away (or, more likely, go right to CD) at the first hint of static.

Hi

I am currently selling a BBC Radio 1 FM crew jacket. It is from the early 90's era of Radio 1. It is extremely rare for these to come up for sale to the public, they are usually only owned by DJs and key staff at Radio 1.

If you're interested in owning this highly collectable piece of Radio 1 history, please see my E-Bay auction at:

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&category=132&item=2155358171

If you have any questions, please e-mail me at radio1dude@hotmail.com

Cheers!

<< I shall be doing some street interviews in the UK next month for possible inclusion in radio program presently under development. >>

i'm looking forward to the answers to your question re: legal requirements. i, too, am planning to start recording interviews for my radio program. if i can piggyback a question with yours ... i'd like to know what the best equipment is for stret interviews. all interviews at my station are done in-studio, so i don't know who to ask. one of the engineers told me that minidisc "might" be a bad choice for what i was planning to do, which is to make the recording and put it right on the air. he said that minidisc recordings "might" require some processing before it's aired. i hope someone can answer this question as well.

You've got to be kidding.  Right?
In a large city there's no space for another FM station.  If there were
the AM daytimer would have already applied for it and moved to FM.
As for 9 kHz spacing in the U. S. I do remember that it was nixed due to
the existing (at that time) base of digital tuners which were set up for
10 kHz spacing only.

CNET was leasing the station from Clear Channel.  That deal ends Jan. 31st.  CNET, in case you haven't followed the company, has been in serious cutback mode lately.  Clear Channel is saying it hasn't decided what to do with KNEW yet, and may use it to simulcast other properties for a while until it does.  Everything else is speculation.

Hi Pat.

I'm also looking elsewhere for this info and if I turn anything up
I'll mail the info to you.

I'll be using DAT for the interviews. I don't see any real reason why
MD cannot be used. Especially if you're using an external preamp. Ask
your engineer what the "mights" are exactly and come back here for a
second opinion.

Cheers.

Mike.

Hi everyone,

If you live anywhere within the shaded area here: -

http://www.worldspace.com/technology/coveragemaps/afristar.html

Or here: -

http://www.worldspace.com/technology/coveragemaps/asiastar.html

Please read on.

WorldSpace is a portable satellite radio network covering all the areas you have just seen. For more information about WorldSpace, go to: - http://www.worldspace.com .

Yesterday USA is a 24 hour radio station broadcasting old-time radio and music. I have recently been in contact with YUSA's founder Bill Bragg. He has recently been in contact with the folks at WorldSpace. There is now a high possibility that Yesterday USA will soon be carried on WorldSpace, however, Bill says that it would be really useful if anyone who is interested in hearing Yesterday USA in their country on WorldSpace to email him at bill @ yesterdayusa.com , saying something like: - "Yes, I would like to receive Yesterday USA via satellite
in my Country".

If you have never heard Yesterday USA, go to http://www.yesterdayusa.com , and listen live online.

Remember, your imput could be very important, so please email Bill and let him know that you would like Yesterday USA on WorldSpace. Again, that email address is bill @ yesterdayusa.com (please remove the spaces before and after the @ symbol. I just did this to save Bill from too much spamming).

Thanks in advance,
Henry

Amateur Radio Newsline™ Report 1328 - January 24, 2003

Amateur Radio Newsline report number 1328 with a release date of Friday, January 24, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Wildfires rage in Australia, an FCC official says the agency is excited about P-L-C and the past becomes today at Cape Cod. These stories and more follow on Amateur Radio Newsline report number 1328 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS HELP IN FIRE COMMUNICATIONS IN VK3 WIKLDFIRE

Hams in down-under are hard at work assisting in emergency communications as widfire rage in several Australian states. Q-News Graham Kemp, VK4BB, is in Brisbane with the latest:

--
Audio report only. No text. Hear it at www.arnewsline.org
--

(Q-News)

**

RESCUE RADIO: REPEATER APPEARS LOST IN VK1 WILDFIRE

Meantime there is some good news regarding hams living in and around the city of Canberra. They are all reportedly O-K, but one of their local repeaters may have been lost in a widlfire thats has been sweeping the area. Phil Longworth VK1ZPL who is the WICEN Coordinator Canberra:

--

Longworth: "We have a couple of repeaters around town. One which is actually located at the NASA site down at Cape Mc Villa. We haven't heard it since Saturday. The scouts cannot get close to there because they have lost a lot of infrastructure. So we are assuming that we have probably suffered some damage."

--

The repeater being referred to is VK1RAC. So far radio operators have not been called in the Canberra area because there have be no major failures in the nations telecommunications system. But hams are standing by even though they may have to do without one major repeater. (Q-News)

**

RESCUE RADIO: US HAMS NOT NEEDED IN MEXICAN QUAKE

Mexico's telecommunications system is working properly following a major earthquake and communications assistance from the United States is not needed. The quake hit in Nortth-West Mexicio. It registered 7.6 on the Richter scale, toppled dozens of homes, killed at least 24 people and injuring at about 175. And while telephone service in several remote areas was knocked out for a time, the Mexican government got it quickly restored. Also, Mexico's own ham radio community has decasdes of experience making outside aid not necessary in many cases.

Here in the United States, Gordon West, WB6NOA, has been monitoring the situation from his home in Costa Mesa Claifornia. Thats about 150 miles North of where the quake hit. And hes been taklking to hams in the area and confirms that United States hams going to assist are just not needed:

--

West: "In communiocating with the maritime mobile operators near Manzinello Mexico, many ofd the mariners rowed ashore and asked whether or not their ham radio gear on 40 meters might help relay messages back to the U.S.A. The villagers on shore evidently indicated that their communications were still up, and, that while they apreciated the boaters going ashore to ask for relays, none were needed.

The mariners did indicate that they felt a slight tidal movement. That was reported the following morning on many of the Baja maritime mobile nets."

--

West says that immediately after the quake hit he began monitoring the various frequencies known to be usaed by Mexican hams for emergencies on 40 and 75 meters. West says that not a signal on the air indicated any apparent need for mutual communications aid from the United States. Don. (ARNewsline™)

SPECTRUM ALLOCATIONS: FCC ON WRC-03 PROPOSALS

Back here in the U-S, an ARRL Bulletin says that the FCC is seeking comments on draft recommendations the World Radiocommunication Conference Advisory Committee adopted January 8th.  Amateur Radio Newsline's Ken Locke, N8PJN, has more details:

--

The FCC's International Bureau says that based on its initial review of the recommendations, it tentatively concludes that it can generally support the proposals recommended by the W-R-C 03 Advisory Committee. And if adopted, United States delegations will use the proposals at bilateral, regional and international meetings.

One agenda item of interest to hams involves examining the adequacy of the frequency allocations for High Frequency broadcasting in the vicinity of 4 to 10 MHz. The FCC also has draft proposals developed by Executive Branch agencies, and the agency is requesting comments on those as well.

The Public Notice was released January 15th.  The deadline for comments is January 31st.  Complete texts of draft proposals are available via the FCC's WRC 03 Web site.  You reach it from a link at www.fcc.gov.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

Comments may be filed via e-mail to wrc03@fcc.gov. You can also submit them by mail the Office of the Secretary, Federal Communications Commission, 445 12th Street, SW, Washington, DC 20554.  (ARRL)

EMERGING TECHNOLOGY:  PLC MAY BE COMING TO THE USA

P-L-C could be coming to the United States -- but not right away.  This according to a top official at the FCC.  Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with the details:

--

P-L-C stands for Powerline Communications and the idea is to use the same wires that bring electricity to your home as a pathway for high-speed Internet access.  And as previously reported, in nations where P-L-C has been evaluated or approved it has caused moderate to severe degradation to a good portion of the electromagnetic spectrum.  In fact,. several nations have decided against implementing P-L-C even though it holds the promise of becoming a less expensive alternative to cable modems and D-S-L telephone lines as a way to get broadband service.

And the FCC appears to be optimistic about P-L-C.  On Wednesday January 15th, Edmond Thomas, chief of the Federal Communications Commission's Office of Engineering and Technology said companies developing the technology have overcome many  hurdles in the past year.

The FCC has been studying P-L-C technology for several months and Thomas says that the agency will pay more attention to it this year. He notes that there are no regulations that prohibit the technology, but the agency is concerned that Internet data transmissions carried over power lines could radiate signals inside and outside the home that could cause interference.

And Thomas indicates that the widespread introduction of Powerline Communications wont happen very soon.  He says that the FCC wants to be certain P-L-C is not going to cause problems to your TV.  And that's certainly good news for all communications services including Amateur Radio.

Reporting from Los Angeles, I'm Bruce Tennant, K6PZW.

--

Obviously this is an emerging technology that can impact negatively on ham radio and will have to be watched.  (Published reports)

**

ENFORCEMENT:  FCC CANCELS EXPERIMENTAL LICENSE WC2XZV

The FCC has cancelled an experimental license to California company because the agency says its being used for other purposes.  According to the CGC Communicator, the FCC cancelled experimental authorization of WC2XZV after Enforcement Bureau monitoring confirmed the operation.

In a short letter dated January 17th, the Commission stated that the California station's emissions were not in compliance with the terms of its experimental radio license.  But a story on recnet.com says a lot more.  It says that that there were published reports of an alleged pirate station operating in the Antelope Valley area prior to the experimental license grant.  The station was operating on 104.7 MHz and identifying as Frequency Radio with its website at www.1047.fm  A check of the website makes no mention of the experimental license or the FCC action to cancel it.  Acopy of the FCC's letter is posted in cyberspace at  www.recnet.com/fcc/wc2xzv_cancel.pdf   (CGC Communicator)

NAMES IN THE NEWS:  MITNICK FREE TO REJOIN THE WWW

Former computer hacker Kevin David Mitnick, N6NHG, has completed his probation and is now free to once again use a computer and surf the web. After being released from prison three years ago on probation, the Mitnick had been barred from contact with computers until last year.  He was not allowed to access the Internet until this his probation ended Monday January 20th.

But simply roaming the web may not what Mitnick has in mind.  Since his release he has turned his efforts to becoming a consultant on computer and Internet security issues.  He hosted a radio program on Los Angeles talk station KFI, has written a book and has even testified before a congressional committee on ways to make computing more secure.

Only a few weeks ago the FCC agreed to permit him to renew his Amateur Radio license. The Administrative Law Judge hearing the case said that Mitnick was rehabilitated and would likely adhere to all of the agency's rules.  And in a recent interview with the Los Angeles Times newspaper, Mitnick said - quote : "The truth is, I learned my lesson."

Kevin Mitnick, N6NHG, also learned a lot about computers and the world-wide-web from his days of hacking.  Now he appears to want to use this knowledge for the benefit of all in society. (ARNewline™ from published news stories)

PROMOTING THE HOBBY:  "AMATEUR RADIO TODAY" - THE VIDEO

The most trusted man in America has lent his name and callsign in support of the hobby.  This as retired CBS newsman Walter Cronkite, KB2GSD, tells the story of hobby's public service efforts to the non-ham public in a new ARRL produced video titled Amateur Radio Today.

Cronkite narrates the program from his office in New York City from a script developed by Alan Kaul, W6RCL.  Kaul is the West Coast Producer of NBC Nightly News and a former anchor here on Amateur Radio Newsline.

Amateur Radio Today was directed by Dave Bell, W6AQ, who is responsible for many ham radio films including the all-time classic "The Hams Wide World."  Bell, Kaul, Bill Baker, W1BKR, of PBS and Bill Pasternak, WA6ITF served the co-producers.  The show was edited at Suite Sixteen Post in Burbank California with Keith Glispie, WA6TFD, at the controls of the all digital Quantel Edit Box.  But its really Walter Cronkite that takes you on a fast-paced six minute trip into the very soul of ham radio.

The only legitimate authorized source of Amateur Radio Today is the American Radio Relay League which holds the copyright. It will be available on video CD in the very near future and -- eventually -- VHS tape. Visit www.arrl.org/catalog and order item number 8861 (ARRL, ARNewsline™)

HAM RADIO VIDEO: WRTC 2002 VIDEO NOW AVAILABLE

Another video is aleady being called the best ham radio sports show ever to hit the street. This with the announcement that the official video of the Amateur Radio Olympics 2002 is now available on DVD and VHS.

The world premier was held in Helsinki Finland on January 18th before an overflow crowd at the Contest Club Finland meeting. Unlike previous ham radio videos, this one is produced from a 100% "pro-sports" perspective.

In order to capture as much of the action as possible, three camera crews taped as many teams and events as they could during the actual 24 hour competition. Supporting all this great footage are high-end 3D graphics, scoreboards, top-ten boxes, team profiles, and everything else that you might expect when watching a professional sports event on television. And the production is even narrated by one of ESPN's top sportscasters

The program's total running time is 60 minutes. The DVD version contains lots of extra features like full score breakdowns for each team, continental line-ups, competitor rulebook, and even all the past W-R-T-C scores dating back to 1990.

If you've ever wanted to watch the worlds top radiosports teams in action, now is your chance. Copies are available for a nominal fee from the website: http://home1.pacific.net.sg/~jamesb (WRTC)

RESCUE RADIO: FISHING BOAT CREW DISAPPEARS BUT CELL PHONE TURNS UP IN INDONESIA

A strange story from Taipei. A mobile telephone belonging to the missing chief engineer of a ship found abandoned off Australia has been used to make more than 80 calls from Indonesia. Australian police said they are baffled by the discovery of a fishing boat full of rotting fish and its lifeboats in tact, but no crew. News reports say that the boat was found drifting off the remote northwest Australian coast. The phone calls from Indonesia add to the mystery of what happened to the missing crew. (PacificRimOnline)

CONVENTIONS AMD HAMFESTS:  THE MIAMI TROPICAL HAMBOREE

The 2003 convention seasons gets off to a bang the 1st weekend in February. Thats when the 43rd annual Tropical Hamboree and ARRL Florida State Convention will be held in at the Fair Expo Center in Miami Florida.

The Tropical Hamboree is truly a fun filled convention with loads of new and used radio gear for sale along with a host of terrific programs and top notch speakers.

The hours of operation are 9 am to 5 pm Saturday February 1st and 9 am to 4 pm on Sunday the 2nd. For everything you might want to know about this years Tropical Hamboree take your web browswer over to www.hamboree.org (Tropical Hamboree)

**

HAM RADIO ASSISTS: THE MIAMI MARATHON

Another activity scheduled for the same weekend in the same place is the 2003 Miami Marathon. Sponsored by Toyota and The National Diabeties Association, the Miami Marathon is a 26 mile foot race starting at the famed Coconut Grove, across Biscayne Bay, to Miami Beach and back again to Miami.

The date for this event is Sunday February 2nd. Ben Nemser WA4DZS, owner of Nemal International Electronics is coordinating the amateur radio communications. His assistant, all the way from New York City is none other than that well-known 'marathon man', and former ARRL 1st Vice President Steve Mendelsohn, W2ML.

With two major events involving ham radio the same weekend, its going to be a major challenge for the South Florida ham community. Its also looks to be a very memorable weekend in Miami as well. (Tropical Hamboree)

**

TECHNOLOGY: EIGHTY ONE MILLION PEOPLE WATCH FREE TV

According to the National Association of Broadcasters, approximately eighty-one million television sets in the U.S. receive programming exclusively from free, over-the-air TV stations. In comments filed with the Federal Communications Commission, the NAB noted that while the total number of television sets in the U.S. is 267 million that more than three out of every ten TV sets relies exclusively on "free TV" for programming. This means that the TV set is not hooked up to cable, satellite or any other subscription TV service.

Other figures noted by the NAB say that twenty-five percent of all cable and satellite homes have at least one TV set in the household that receives signals solely from free TV. Also, 24 percent of African-American and 32 percent of Hispanic households rely exclusively on free TV for their television viewing.

The National Association of Broadcasters analysis was provided to the FCC as part of the Commission's "Annual Assessment of the Status of Competition in the Market for the Delivery of Video Programming." The N-A-B says that its comments demonstrate the considerable extent to which consumers still depend on over-the-air broadcast television signals. (NAB)

**

INTERNATIONAL - IARU

On the international scene, the Radio Society of Great Britain passes along word that the national amateur radio societies of Cameroon and Macau have been admitted to the International Amateur Radio Union. A-R-T-J in Cameroon was formed in 1998 and has 14 members, seven of whom are licensed. Macau's ARM was founded in 1992 and now has 85 members. Both societies were inducted as of last December the 9th. (RSGB)

**

ON THE AIR: AO-40 QSO PARTY

The operating period for the first AO-40 QSO Party has been extended to 4 days in order to give more operating windows to Amateur stations world wide. The QSO Party will begin at 0000 UTC on the 24th of January and conclude at 2400 UTC on January 27th. Currently stations from over 30 countries have indicated their intention to participate in this years event. (ANS)

**

DX

In DX, a team of operators that includes SM0BSO, SM0LQB and SM1TDE will operate from the QTH of JW5E on Spetsbergen between February 24th and March 1st. Look for them on 160 through 2 meters running CW, SSB, RTTY as well as SSTV and other soundcard modes. QSL to each operators home call direct or via the bureau. (GB2RS)

**

THAT FINAL ITEM: SPANNING THE ATLANTIC

And finally this week, the story of history being celebrated. Of the earliest days of radio being commemorated by the people of the 21st century. And those who were there said it was like the past catching up with the future on a cold day at Cape Cod Massachusetts.

The event was the 100th celebration of the first ever radio transmission from the United States being received in Europe. It was made by radio pioneer Guglielmo Marconi in 1903. And it was his daughter, Princess Elettra Marconi, who lent her voice to begin the 100th anniversary celebration of the first trans-atlantic radio message. A message that probably sounded something like this:

--
Audio Here
--

That sound was supplied by Bob Doherty, K1VV. He along with members of the Marconi Radio Club and Marconi Cape Cod Memorial Radio Club were the people behind KM1CC. That was the on-the-air celebration of the two club's namesake making the first wireless transmission to Europe. And quite an affair it was.

Princess Elettera Marconi began the festivities in a brief contact with Ken Bowersox, KD5KBP. That's Commander Ken Bowersox on board the International Space Station. A bit later, Bowersox spoke with Cape Cod area school children who asked questions about life on-orbit. Both contacts were made possible by ARISS -- Amateur Radio on board the International Space Station.

The January 18, 1903 contact by Guglielmo Marconi used an early form of hand sent code to span the Atlantic. A short time later Marconi predicted that mans voice would eventually span the globe using wireless. Now, precisely a hundred years later on a frigid January 18, 2003. Marconi's daughter returned to near the scene of that first contact and got to speak to a man in space. If he were alive today, Guglielmo Marconi would justly be proud. (K1VV)

Just wondering if anyone has any good tips for a budget broadcast
mixer for a small news room?
There is currently a D&R budget desk installed but I'm not happy with
it. All the inputs are unbalanced and the telco channels do not have
individual cleen feed (mix minus) outputs.
I'm currently looking at the Soundcraft RM100/105 type desk but any
other suggestions would be very welcome.

Cheers...

This radio might do search in 1 kHz steps.
In Europe LW receivers also do this to facilitate reception of 177 en
183 kHz, two channels (or better a split for 180) that are apart from
the 9 kHz spacing system.

Saly, it seems they'll be signing off from live shows at the end of this week.

I just looked at RobBlack.com, which has details of his search for the next gig (good luck Rob, we've all been there!).

They've been running promos talking-up the sign-up service for the past month or so - now we know why. However, they haven't said anything yet on the air about the current service closing.

A great shame, because I'm only an intermediate computer user, and still found it a great listen.

Too much of a niche-y format though, judging by the endless PSA's appearing in ad breaks.

Good luck anyway to all those they're letting go.

KNEW is no longer carrying CNET radio, and is playing a "change of format" recording saying "the talk begins on Monday at 6AM". Perhaps a new talk format.

As far as the old format is concerned: good riddance. I would have liked a high tech format, but this one was cluttered with endless commercials and promos, chit chat, happy talk and off-topic stuff. I never understood the idea of David Lawrence in Washington, instead of broadcasting from Silicon Valley. It has died a well deserved death. A much better format was the cable show "the screen savers"; unfortunately, our cable system doesn't carry it.

Rick Karlquist

Several pages have just been updated on the British DX Club club web site at http://www.bdxc.org.uk:

Africa on Shortwave - by country
Africa on Shortwave - by frequency

These lists, which give times and frequencies for all known African domestic and opposition broadcasters on shortwave, have been fully updated by Tony Rogers. They can be found on the Articles Index Page.

The DX Diary and DX Links have also recently been updated on our Home page.

My name is Val Davis.  Some of you know me.

I have done mornings from Maine to Texas and everywhere in between.
I used to voice for ABC Television both nationally and locally in Houston.
I was also the voice of the ABC Classic Rock Format for a few years.

I am from the same town as Rush Limbaugh and started at the same station Rush started at (KGMO) in Cape Girardeau, MO.  That is where my similarity to Mr. Limbaugh ends.

I will be hosting a talk radio program call "The Show".  We expect to be picked up by I.E. America Radio Network in the next 30-45 days.

If your station is looking for an alternative to the "right wing dominated public discussion", I encourage you to contact me at

vdavis@nerds.com

Additionally, if your station is looking for some good Liners or Spot Production, I am also available.  You can visit http://www.productionroom.com for more info. My prices are posted and I will offer a 25% discount to readers of rec.radio.broadcasting.

Look forward to hearing from some of you.

Sincerely,

Val Davis

vald@productionroom.com

Well, yes and no.
Likely, that settle out has to do with the audio being tilted positive
at the transmitter. Long story.

Did the engineer tell you why minidisc would require processing? At WOR we converted the news department to minidisc and didn't use anything other than the overall processing of the station's audio.

We used minidiscs on the WOR Radio Network for refeeds, again without processing them. Now the refeeds are done from the Enco digital audio system. At the time I left, minidiscs were still run, synchronized with the Enco, as emergency backups.

At the last network I ran we used minidiscs for all sorts of things, without processing.

My choice for field interviews would be a professional minidisc recorder. Don't use DAT. After a while you'll find tracking from machine to machine to be a problem.

We are in need of some testers for a broadcasting site that we just posted. The site is an auction related site that is specific to radio broadcasting equipment. At the moment no billing or any fees of any kind are being enforced.

What we need, is to have several professionals that are familiar with auction activity and broadcast equipment to post real radio station items for sale. If you actually sell them then good for you!

The site in question is located at http://www.radiofeedback.net. Please understand this is not a cheap ploy for advertising, we just need real professionals like you to give it a try and notify us via email of any problems or suggestions. Our email is webmaster@radiofeedback.net.

For you beta testers; we will grant free auction listings for the first 90 Days of operation. We will need to limit the "FREE" listers to 10 for now (sorry). Prior to going "Live" we will notify you via email of when the 90 day countdown will begin. So be sure to send us an email and let us know that you are willing to participate.

Under no circumstances will we use your email for anything more than this beta project. (You will be removed from our beta records when the testing is complete.)

Thank you for your time and attention.
(No need to add to this thread unless you feel the need.)

Radio is free but webcasting is very expensive. Add the recent RIAA fees and it's unlikely to pay for itself, considering the relatively small number of people who listen. This is especially true for the mom and pop stations.

Because of the RIAA and the fact that Yahoo Broadcast wasn't making money before the fees were added, they dumped the service.

I guess you haven't been keeping up. Radio may be free, but everyone (like the RIAA, etc.) has to have an inflated piece of the pie from anything that has to do with "Internet". Broadcasters have gone back to what they know: radio.

Thank you for sharing Don. I think Mutal  used that system up about 1970
when I was comming into the biz.
1970 when i HAD long hair, sideburns and no ex wife.

New York voice over artist looking for new opportunities. Have experience in
radio, television and radio news. Excellent dynamic range, can do character,
hard and soft sell, long and multi-person reads. Easy to work with, take
direction well and extremely efficient. If you need someone passionate about
doing a good job please conatact me for my demo.

>What is up with this shit of not  streaming radio stations anymore...<

The shit is that streaming is too expensive, and has never earned so much as a dime for any over-the-air broadcaster.  Consider the required royalty payments to BMI, ASCAP and SESAC (because the law and the courts say that streaming is a separate public performance from broadcasting even when the two are simulcast), the fact that streaming adds to neither ratings nor the bottom line, the effective prohibition of streaming ads using union talent (because the talent fees for streamed commercials are 300% of those for over-the-air operations, and that adds up quickly), the restrictions of the Digital Millennium Copyright Act that prohibit certain programming practices from being used in streaming, plus the fact that most of the major broadcast-streaming operations have closed up shop.  This week, Clear Channel joined Viacom, Entercom and other broadcast groups that have stopped streaming, although I understand some CC stations are still doing it as of this writing.

>the last time I checked radio was free! Right?<

Where do you buy those rose-colored glasses, anyhow?  ;-)

I have done a few radio jingles in my studio and I am in the process of putting together a web page. I'm certain that I can attain the level of quality of the big advertising firms for very cheap, but the question is, how do I get started?  How do I get people to see my web site? I have done the addme.com thing already to suggest my site to search engines. Are there any radio/tv advertising newsgroups?

Thanks Travis Barnes

For all the same reasons, HBC pulled all its streams effective at the end of
December.

I don't know where you've been, but radio is not free.  This has been extensively (and exhaustively) discussed in this forum and others, but since you appear to be a latter-day Rip van Winkle, suffice it to say the web streams have stopped because of demands for various fees by AFTRA (for streaming commercials) and ASCAP/BMI/RIAA for playing music.  Since there is no revenue for stations in streaming, few are willing to pay for the privilege of doing it.

PArts of that system were around right through the 70's.
LOL... In my early days I ran (slept through) Herb Jepko at WVOR. The
audio line feeding the net audio was so bad, a dialup oculd do it
better, even in those days.

Hello all,

After visiting the Message Board of the Record Collectors Guild, these are some of the topics that caught my eye:

1. Connect turntable output to computer??
 http://www.recordcollectorsguild.org/phpbb/viewtopic.php?t=1398

2. Discrete 4-channel discs (Quad).
 http://www.recordcollectorsguild.org/phpbb/viewtopic.php?t=1440

3. Warped Records (How to fix).
 http://www.recordcollectorsguild.org/phpbb/viewtopic.php?t=1318

There are a lot more questions and answers found here.  Along with lots of record sellers and buyers.

the Message Board:
http://www.recordcollectorsguild.org/phpbb/index.php

Or, visit the home page for lots of infomation and resources on record collecting:
http://www.recordcollectorsguild.org/

Regards,

Amateur Radio Newsline™ Report 1325 – January 3, 2003

Amateur Radio Newsline report number 1325 with a release date of Friday, January 3, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Ham radio growth resumes in 2002 and a celebration of our radio past.  These stories highlight Amateur Radio Newsline report number 1325 coming your way right now.

(Billboard Cart Here)

**

HAM STATS:  HAM RADIO GREW IN 2002

Happy New Year and welcome to 2003.  We start the year with some good news. Ham radio begaN growing once again 2002.  Bill Pasternak, WA6ITF, has the details:

--
That’s right Mert.  2002 was definitely a good year for growth in the United States Amateur Service, and the numbers supplied by Fred Maia, W5YI of the W5YI VEC prove it.

We ended the year 2000 with a total of 681,187 hams licensed by the FCC.  A year later, at the end of 2001 we were down to 680,371. A loss of 816. And many feared that the downward spiral would pick up speed in 2002.

Well the pundits were wrong. 2002 was a turn-around year. Not only did the U-S ham radio population increase, its now up to 682,591. A net gain of 2200 and more than offsetting the previous years loss. Not a lot of people, but at least numbers going in the right direction.

And looking at the numbers, the greatest growth came in two licenses. As expected the Technician class continued to expand. Surprise was the Extra. A total of 4082 people either upgraded to the top license or went right to it from ground zero. Either way, the numbers show that there is a lot of interest in the Extra now that the 20 wordd per mintue Morse test has gone away.

The loosers in 2002? The license clssses no longer issued. Tech Plus was down by 45%. Novice class lost 30% and Advanced plunged 20%. But it does not mean that all the holders of these licenses left ham radio. Some probably did, but the majority seemed to have upgraded to higher class licenses with Tech Plus to General leading the way.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.
--

What will 2003 hold for ham radio growrth? Good numbers we hope -- but we will have to wait a year and see. (W5YI)

CELEBRATING OUR HERITAGE: MARCONI AT 100

Now, for a trip back in time. To an event that would mark the very dawning of the communications revolution. And word of a ham radio special event to celebrate it. Roy Neal, K6DUE has more:

--

LISTEN TO HISTORY. A VOICE FROM RADIO'S PAST…

(Marconi audio)

THAT WAS THE MAN GENERALLY CREDITED WITH INVENTING RADIO AND MAKING THE FIRST WIRELESS TRANSMISSION ACROSS THE ATLANTIC. GUGLIELMO MARCONI…RESEARCHER…INVENTOR…BUSINESMAN…ENTREPENEUR.

THIS YEAR, FRPM THE 11TH TO THE 19TH OF JANUARY, A SPECIAL EVENT AMATUR RADIO STATION WILL BE ON THE AIR, COMMEMORATING THE 100TH ANNIVERSARY OF HIS HISTORIC TRANSMISSION BETWEEN THE UNITED STATES AND GREAT BRITAIN. THAT GROUNDBREAKING BROADCAST TOOK PLACE ON JANUARY 18TH, 1903.

(Spark gap sound)

AND THAT WAS THE SOUND OF RADIO IN THOSE DAYS. RAUCUS. MADE BY A SPARK CONNECTED TO AN ANTENNA. MARCONI USED A 35 KILOWATT ROTARY SPARK TRANSMITTER

FROM CAPE COD IN MASSACHUSETTS TO SEND GREETINGS FROM THEN PRESIDENT THEODORE ROOSEVELT TO ENGLAND'S KING EDWARD THE SEVENTH.

NOW, A HUNDRED YEARS LATER, THE MARCONI RADIO CLUB, IN COOPERATION WITH THE MARCONI CAPE COD MEMORIAL RADIO CLUB, WILL USE MODERN MODES OF COMMUNICATION TO CELEBRATE BY TAKING TO THE HAM BANDS. THEY WILL USE THE CALL KM1CC AND OPERATE FROM THE TOWN OF EASTHAM, NOT FAR FROM THE ORIGINAL MARCONI WIRELESS SITE.

THEY PLAN TO USE SSB, CW, FM AND EVEN SEVERAL DIGITAL MODES THROUGH OSCAR SATELLITES. PRESIDENT GEORGE W. BUSH IS EXPECTED TO SEND A COMMEMORATIVE MESSAGE. WORKING WITH ARISS, AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION, STUDENTS AT 3 CAPE COD HIGH SCHOOLS EVEN HOPE TO TALK TO THE ASTRONAUTS AND COSMONAUT ON ORBIT.

FOR HAMS LUCKY ENOUGH TO MAKE CONTACT WITH KM1CC, THERE'S A SPECIAL QSL CARD. TO GET ONE, UNITED STATES STATIONS SHOULD SEND A STAMPED ENVELOPE TO BARBARA DOUGAN, KILO-BRAVO-ONE-GOLF- SIERRA-OSCCAR, 99 MARCONI SITE ROAD, WELLFLEET, MASSACHUSETTS 02667. THOSE OUTSEIDE THE UNITED STATES SHOULD SEND CARDS VIA THE W ONE QSL BUREAU.

AGAIN THE CALL FOR THIS VERY SPECIAL,EVENT WILL BE KM1CC. YOU CAN GET MORE INFORMATION ON THE MARCONI CENTENNIAL ON THE WEB AT THE URL FOUND IN THE PRINT EDITION OF THIS WEEK'S AMATEUR RADIO NEWSLINE REPORT.

FOR THE AMATEUR RADIO NEWSLINE, THIS IS ROY NEAL, K6DUE.

--

A special thank you to the planners of the Marconi 100 celebration for the great press package they supplied. Using the latest computer technology they captured a bit of our radio heritage for all to enjoy in the 21 century. Additional details are on the Marconi Radio Club Web site at http://personal.tmlp.com/k1vv/w1aa/. (Marconi Radio Club)

**

RADIO RULES: FCC SEEKS COMMENTS ON AUTO UPGRADE

Back to the present, an ARRL bulletin says hat the FCC is inviting comments on two Amateur Radio-related petitions for rule making. Both have been put on public notice and are available for review and comment.

In his petition, designated RM-10620, Dale Reich, K8AD, has asked the Commission to automatically upgrade Novice and Advanced license holders to the next license class if the licensee has 20 or more years of operating experience. Among other proposed changes in what he calls a ''merit and service upgrade'' schedule, Reich asks that Novice phone privileges in the 2-meter band be reinstated for those still holding that license.

Reich claims that the proposed changes could augment public service abilities by those receiving the added privileges. The deadline to comment is January 17th. (ARRL)

**

## RADIO RULES:  FCC SEEKS COMMENTS ON SATELLITE LAUNCH PRE-NOTIFICATION

Also asking for a rules change is AMSAT North America.  The ham radio space agency has asked the government to drop its presently required 27-month pre-space notification to the FCC's
International branch for Amateur Satellite launches.

AMSAT feels that a pre-space notification within 30 days of a launch commitment is more than sufficient.  Its request has been assigned as RM-10621.  This one also carries a January 17th comment cutoff deadline.

**

Break 1

Wishing you a Happy New Year from the United States of America.   We are the Amateur Radio Newsline, heard on bulletin stations around the world including our longtime friends in the Holmsburg Amateur Radio Club repeater serving Philadelphia Pennsylvania.

(5 sec pause here)

## NAMES IN THE NEWS:  ART BELL, W6OBB, RETIRES

Art Bell, W6OBB,  bid a final farewell to his Coast to Coast A.M. radio show as 2002 gave way to 2003.  Over the fifteen years he hosted the show, Bell took it to the very top of the ratings peak.  It was over 450 radio stations in North America,  heard world wide over the Internet and had an audience estimated in the 10’s of millions.

Bell had departed the show once before due to a family situation that needed his full time and attention.  The show did not do well under the substitute hosts.  Bell returned the following year and and rebuilt the program to its powerhouse position on the Premiere Radio Network.  Often, after the program, Bell could be found on 75 meters chatting with his friends.

In saying goodbye to his listeners, W6OBB explained that this is not the end of his career in radio.  Actually it’s a new beginning.

Bell says that he and his wife have made one of their dreams come true.  They built their own radio station – KNYE – located in Pahrump Nevada and its
now on the air.  Bell says that building KNYE into the station he wants it to become will be the next challenge in his broadcasting career.

Meantime, you can still hear -- and talk to Art Bell, but only if your signal can be heard in Pahrump Nevada.  Just listen on or near 3.840 MHz for the call sign W6OBB.  If you hear Art, please say hello and you might add --
“...thanks for the ride.”  (ARNewsline™)

## ENFORCEMENT: ANOTHER GRIZZLEY PROBLEM

The FCC’s patience appears to be wearing thin with the license holder and users of a Northern California repeater. This as the agency’s Enforcement Bureau again targets the San Francisco area Grizzley Peak machine. Amateur Radio Newsline’s David Black, KB4KCH, has the rest of the story:

--

When Riley Hollingsworth became the FCC's chief ham radio rules enforcer several years ago, the Grizzzley Peak repeater system was one of the first problems he tackled.

Hollingsworth shut the repeater down until its license holder agreed to setting up around-the-clock control operators. Their duty was to monitor the K7IJ system and to keep watch over its users. Transient operators had to identify at the beginning and end o every transmission. Provisions had to be made so that the FCC could monitor the system from a remote location.

That strategy worked--for a while. At one point, users called the Grizzley Peak repeater a pretty decent machine.

But last April problems started again. That's when the FCC says users began getting out of control. The Commission began receiving reports of unlicensed operators using the repeater. And reports of intentional interference surfaced, along with lengthy and unidentified key-ups. There were also reports of users failing to properly identify and other violations of the Amateur Service rules.

On November 26th, Hollingsworth wrote to system license holder Bruce Wachtell, K7IJ. Hollingsworth's letter reminds Wachtell that he will be held legally accountable for the proper control of his repeater. Hollingsworth tells Wachtell that it's up to him to find ways to ensure that people using the repeater are doing so legally.

And, just as Hollingsworth suggested to Los Angeles repeater operator Wayne Curley, WA6NRB, he suggests that Wachtell lock out violators. Hollingsworth suggests using tone access, or limiting the repeater's operation or any other steps to bring it into compliance. If the users refuse to adhere to the rules and if Wachtell cannot solve the problem, then the repeater must go off the air.

If Wachtell refuses, Hollingsworth's letter outlines what might be ahead: That could include fines, license suspension or even revocation for failure to comply.

And Hollingsworth adds these comments. He tells Wachtell that the decision to operate a repeater is a totally voluntary one. He says a repeater is a convenience in the Amateur Radio Service and that putting one up is not a necessity. In other words, nobody is forcing Wachtell -- or any ham -- to put a repeater on the air and perhaps place his or her license -- on the line.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

No word yet if Wachtell has responded to the FCC. (FCC)

**

ENFORCEMENT: FCC RAIDS NORCAL UNLICENSED BROADCASTER

Still in Northern California, the FCC has raided an unlicensed broadcaster. A station calling itself Berkeley Liberation Radio.

The bust took place on December 11th. That’s when FCC agents, a dozen federal Marshal’s and Oakland Police raided the station’s studio and carted away all broadcast equipment. Reports say that the only one thing left was a copy of the court issued seizure warrant for the radio gear that the government lugged away. (W5YI)

**

ENFORCEMENT: INTERFERENCE BRINGS SUSPENSION

An Ohio ham has agreed to a one-year suspension of his amateur license after being cited by the FCC for deliberate interference. Gary Weiler, KI8DI, agreed to hand in his license for one year rather than face possible fines and license revocation. Weiler was cited for numerous instances of interference on a Cincinnati area repeater. (From FCC release, CQ)

**

ENFORCEMENT: FCC FINES ATT WIRELESS

AT&T Wireless Services has agreed to pay $2 million to settle a probe into possible violations in deploying enhanced 911 service over its network. Last May, the Federal Communications Commission in May accused the company of failing to meet certain deadlines for offering improved location information to more precisely pinpoint the location of those who dial 911 for help from their mobile telephone. In addition to the $2 million payment, the carrier also agreed to a timeline for deploying location technology in its network, including having compliant technology in at least 1,000 cell sites early this year and increases the service to 8,000 sites by June 30th, 2004. (From FCC release)

**

AMATEUR RADIO HONORS: THE DARA AWARDS

2003 brings with it the opening of the nominating period for several prestigious ham radio awards programs. The most preeminent among these is the Dayton Amateur Radio Club’s Radio Amateur of the Year, Special Achievement and Technical achievement awards that will be presented at the Dayton Hamvention next May.

There are three DARA awards given each year.  Technical Excellence goes to a ham who has made an outstanding technological  advancement in the field of Amateur Radio.  The Special Achievement Award honors a ham who has made a singular outstanding contribution to the advancement of the hobby.  But the most coveted Dayton award is the Radio Amateur of the Year.  It is reserved for the special person who has made a long term commitment to the advancement of amateur radio.  A well-rounded individual who continulally contributes to the hobby in some outstanding way.

The deadline to submit is January 30th and there are two ways to ways to file a nomination.  You can send it by U-S mail to Hamvention Awards, Post Office Box 964, Dayton Ohio, 45401.  Or you can do it on-line by taking your web browser to www.hamvention.org and clicking on Award Nominations.  (DARA)

**

AMATEUR RADIO HONORS:  THE CQ AMATEUR RADIO HALL OF FAME

Also seeking nominations is the CQ Amateur Radio Hall of Fame.  This ongoing program honors those whose technical or other accomplishments have helped to propel Amateur Radio forward, or whose achievements in other areas of life have helped to improve ham radio’s reputation simply through association.

Nominations for the award can be made by letter to CQ Amateur Radio Hall of Fame, 25 Newbridge Road, Hicksville New York, 11801.  Nominations can also be filed by e-mail to hall-of-fame@cq-amateur-radio.com.  And in case you have not yet figured it out, this award is sponsored by our friends over at CQ Magazine.  (CQ)

**

BREAK 2

This is ham radio news for today’s radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM HELP:  ANTENNASUP.ORG

Do you have some advice for your fellow hams in dealing with local authorities to get an antenna permit?  Want a place to share it?  Well try a new website called www.antennasup.org.

Its the work of Duane Mantick, WB9OMC, who freely admits that it does get a bit indignant in spots but there is a reason.  That being to wake up and shake up a few hams to get them involved in what C-Q Magazine said may be the most serious threat yet to Amateur Radio.  The ability to put up a sky hook and get on the air.

Duane adds that the site is still under constuction and that hes waiting for some graphics. He is also working on collecting some more specific URL's to relevant documents for those who drop in for more information.

Again thats www.antennasup.org.  Go  over and take a look for yourself.
(WB9OMC)

**

CONVENTIONS AND HAMFESTS:  LIMARC IN FEBRUARY

The Long Island Mobile Amateur Radio Club annual Indoor Winter Hamfest will be held Sunday, February 23rd from 9 A.M. to 1 P.M..  The venue is the Levittown Hall in the town of Hicksville New York not all that far from the offices of C-Q Magazine.

Planners say that in addition to the regular faire, ham radio testing will also be available on site.  For more information on this event please take your web browser to www.limarc.org or call the 24-hour info line at 516-520-9311.
(LIMARC)

**

SPACE AND SCIENCE:  ICESAT TO MEASURE ICE FROM SPACE

NASA scientists hope to get new insight into the future of global ocean levels with the launch of a satellite designed to measure the waxing and waning of the planet's largest ice sheets. The Ice, Cloud and Land Elevation Satellite, or Icesat, is intended to spend a minimum of three years making nonstop measurements of the elevation of the ice sheets that blanket Greenland and Antarctica. That will help answer the question of whether those layers of  ice, which are up to two miles thick in places and contain an estimated 8 million cubic miles of fresh water, are growing or shrinking. (NASA)

**

INTERNATIONAL - UK: THE RADIO COMMUNICATIONS FOUNDATION

The Radio Society of Great Britain has announced the establishment  of the Radio Communications Foundation.  As envisioned. the new foundation will be used by the RSGB to channel all its work in the field of education and training.  It will support the promotion of amateur radio to the wider audience in the U-K. The Foundation is being registered as a charity and will operate independently of the normal commercial activities of the RSGB.  (RSGB)

**

## WRTC2002: THE LAST MEETING AND A NEW VIDEO

December 15th marked a final gathering of the WRTC 2002 Organizing Committee and the World Radiosport Team Championship hosts.

The group met in in Vantaa Finland not far from Helsinki Airport. The main business included delivery of the official report on the games and a handover of the remaining work and accounts to Contest Club of Finland.

The day finished with a screening of the new WRTC video. The show will be made available to the public at a Contest Club of Finland meeting slated for January 17th to the 19th. It is narrated by ESPN Sports Channel commentator Kurt Perry from a script written by WRTC competitor James Brooks, 9V1YC. (OH2BH)

**

## DX

In DX, word that F6FXS, will be active from Guadeloupe between February 12th and March 12th. He will operate only CW using a Icom IC-706 into a wire antenna. Search for him in the morning and the evening -- local time -- on 40 through 10 meters. QSL direct or via the bureau. (OPDX)

Also, F5IRO, is expected to be active from Reunion Island through February. Word has it that he will also try to obtain permission to be active from Juan da Nova and Glorioso islands as well. More on this one as information is made available. (OPDX)

**

## THAT FINAL ITEM: HAM RADIO’S HEAVY METAL SOUND

And finally this week, the story of ham radio’s heavy metal. No, not the music. Rather the radios that weigh a lot, sound so good and glow in the dark. Here’s Amateur Radio Newsline’s Paul Courson, WA3VJB:

--
Audio only report. Hear it by taking your web browser to www.arnewsline.org and clicking on the newscast number to download the MP3 file.
--

As reported last week, the ARRL in a few weeks plans take up a proposal to establish an A-M endorsement for the popular Worked All States award. The new endorsement would recognize the achievement of exclusively using full carrier Amplitude Modulation in earning the W-A-S certificate. (WA3VJB, ARNewsline™)

**

## NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). I've been following the streaming thread, and I have a question.

OK, I understand there isn't any revenue in streaming, but isn't there a setup that deals with those concerns? Clear Channel's WAKS and WMVX here in Cleveland just recently *started* streaming. I thought Clear Channel had a big deal with Hiwire.com - Hiwire's hook is that if you stream through them, you don't stream ads, just content, and they insert ads that they sell that are appropriate for the listener's location (and possibly other demographic info). Really, I think it's a good setup. Eliminates the problems of ads being sold by the station and being broadcast in areas where they shouldn't be, and eliminates some other issues too. Has the Clear Channel deal with Hiwire gone south?

Curious,
  SJS

I've always maintained that Infinity is less willing to spend money on radio than Clear Channel, and I think I now have proof of that.

Infinity's radio stations here -- two of them, anyhow -- have a free phone number that lets you dial in via cell phone without paying airtime. You dial, for example, *102 from your cell phone to get WDOK/102.1.

In Infinity's case, in Cleveland, *102 must be dialed from a Northcoast PCS cell phone. The station makes a big deal about how it's a free call.

Well, normally when you have a setup like this and the listener doesn't pay airtime for the call, the airtime gets billed back to the radio station.

But with Northcoast PCS, there is no airtime. Northcoast provides flat-rate unlimited local calling for $35 per month, much like its counterparts MetroPCS and Cricket in other parts of the country. So what if it's a free call? On Northcoast, you wouldn't be paying airtime for the call anyhow!

Compare and contrast with WKDD in Akron, which is owned by Clear Channel. Their number #981 is set up on Verizon Wireless's network. I haven't asked, but I'm pretty sure those calls aren't being put through for free. Verizon doesn't do all that much advertising on the station; nor did Airtouch, VZW's predecessor in northeast Ohio, so I would question the value of doing a trade-out.

If you get anybody to use it they're more idiotic than you are.  It may happen. Try WTVN 610's press-release-as-serious-news-feature department.

To get serious coverage you'd need an African-American Ham History, say an 8th day of Kwanzaa.  In fact you've overlooked a great opportunity, now that I think of it, talk about press release mentality.

Umoja, kujichagulia, ujima, ujamaa, nia, kuumba, imani, and ham radio.  Go for it. This is NPR material.

Or you could try a light touch, and celebrate a hundred years of delusions, still staying within the press release genre.

The only ham who ever did any good was Jean Shepherd, in tales of listening to the code as a boy on Indiana nights; he sent once his own call on the kazoo, just once ``cq de k2ors'' just once, and said ``There, I've sent a message to hams.''  He had for instance given his home address to every one of them, back in an age when hams were universally nice guys.

He did not say the PR pap, for instance that hams serve the community or are really good in disasters by providing communications - I've never seen this; it seems to me they're always pains in the butt, more so in disasters.

But Shepherd uniquely told people why they might like to be hams, and it wasn't from importance.  And I think he told people why they might like to be hams as a boy in Indiana at night long ago.  The situation is a little different today.

I don't know how press release types get to appoint themselves the voice of the hobby in any case.  Who speaks for the hams who think the PR people are self-important morons?  Me I guess.
